VEHICLES SOLD IN CANADA
With respect to any Vehicles Sold in Canada, the name FCA US LLC shall be deemed to be deleted and the name FCACanada Inc. used in substitution therefore.

DRIVING AND ALCOHOL
Drunken driving is one of the most frequent causes of accidents.

Your driving ability can be seriously impaired with blood alcohol levels far below the legal minimum. If you are drinking, don’t drive. Ride with a designated non-drinking driver, call a cab, a friend, or use public transportation.

WARNING!
Driving after drinking can lead to an accident. Your perceptions are less sharp, your reflexes are slower, and your judgment is impaired when you have been drinking. Never drink and then drive.

This manual illustrates and describes the operation of features and equipment that are either standard or optional on this vehicle. This manual may also include a description of features and equipment that are no longer available or were not ordered on this vehicle. Please disregard any features and equipment described in this manual that are not on this vehicle.

FCA US LLC reserves the right to make changes in design and specifications, and/or make additions to or improvements to its products without imposing any obligation upon itself to install them on products previously manufactured.

■ INTRODUCTION .......................... 4
■ HOW TO USE THIS MANUAL ............ 4
■ WARNINGS AND CAUTIONS ............. 5

■ VEHICLE IDENTIFICATION NUMBER .... 6
■ VEHICLE MODIFICATIONS/ALTERATIONS . 6
Congratulations on selecting your new FIAT 500e. Be assured that your 500e represents an elegant marriage of technology and Italian styling that is as good for the environment as it is fun to drive!

This Owner’s Manual has been prepared with the assistance of service and engineering specialists to acquaint you with the operation, understanding and maintenance of your 500e. It is supplemented by Warranty Information, and various customer-oriented documents. Please take the time to read these publications carefully. Following the instructions and recommendations in this manual will help assure safe and enjoyable operation of your vehicle.

The enclosed Warranty Information lists the services that FCA US LLC offers to its customers:

- The Warranty Certificate with terms and conditions for maintaining its validity
- The range of additional services available to FCA US LLC customers

NOTE: After reviewing the owner information, it should be stored in the vehicle for convenient referencing and remain with the vehicle when sold.

When it comes to service, remember that your authorized dealer knows your vehicle best, has factory-trained technicians and genuine MOPAR® parts, and cares about your satisfaction.

**HOW TO USE THIS MANUAL**

Consult the Table of Contents to determine which section contains the information you desire.

Since the specification of your vehicle depends on the items of equipment ordered, certain descriptions and illustrations may differ from your vehicle’s equipment.

The detailed index at the back of this Owner’s Manual contains a complete listing of all subjects.

Consult the following table for a description of the symbols that may be used on your vehicle or throughout this Owner’s Manual:
WARNINGS AND CAUTIONS

This Owner’s Manual contains WARNINGS against operating procedures that could result in a collision, bodily injury and/or death. It also contains CAUTIONS against procedures that could result in damage to your vehicle. If you do not read this entire Owner’s Manual, you may miss important information. Observe all Warnings and Cautions.
VEHICLE IDENTIFICATION NUMBER

The Vehicle Identification Number (VIN) is found on the left front corner of the instrument panel, visible through the windshield. This number also appears engraved on the right front door sill, under the sill scuff plate, on an adhesive label applied to the right door opening on the B-Pillar, on the vehicle registration and title.

NOTE: It is illegal to remove or alter the VIN.

VEHICLE MODIFICATIONS/ALTERATIONS

WARNING!

Any modifications or alterations to this vehicle could seriously affect its roadworthiness and safety and may lead to a collision resulting in serious injury or death.

**IMPORTANT VEHICLE INFORMATION**

Your 500e operates entirely on electricity stored in the high voltage battery. Unlike a conventional vehicle or Hybrid there is no internal combustion engine. Battery Electric Vehicles have unique operating characteristics that you should become familiar with to ensure you are getting the optimal performance from your vehicle.

**High Voltage Battery**

Your vehicle is equipped with a Lithium-ion high voltage battery that is used to power the electric powertrain systems and the 12 volt vehicle electrical system.

The high voltage battery is located under the vehicle. The high voltage battery is maintenance free and designed to last for the life of the vehicle.

Lithium-ion batteries provide the following benefits:

- Lithium-ion batteries are much lighter than other types of rechargeable batteries of the same size.
- Lithium-ion batteries hold their charge; they only lose approximately 3 percent of their charge per month.
- Lithium-ion batteries have no memory, which means that you do not have to completely discharge them before recharging, as with some other batteries.
Lithium-ion batteries can be recharged and discharged thousands of times.

High Voltage Battery Service Disconnect
The high voltage battery service disconnect is located under the rear passenger seat lower cushion. If your vehicle requires service, see your authorized dealer.

**WARNING!**
Never try to remove the high voltage service disconnect. The high voltage service disconnect is used when your vehicle requires service by a trained technician at an authorized dealer. Failure to follow this warning can cause severe burns or electrical shock that may result in serious injury or death.

Disposal of the High Voltage Battery
Your vehicle’s high voltage battery is designed to last the life of your vehicle. See your authorized dealer for information on the disposal of the battery if it should require replacement.

10 THINGS TO KNOW BEFORE STARTING YOUR VEHICLE

- Lithium-ion batteries can be recharged and discharged thousands of times.

**General Information**
The vehicle is also equipped with a Battery Management System that is designed to:

- Ensure safe operation
- Maximize driving range
- Maximize the life expectancy of the high voltage battery

**NOTE:**
- During vehicle start up and shut down, a clicking noise may be heard from within the vehicle. When the ignition key is turned to the on position, the high voltage battery contactors inside the battery are closed to make the stored electricity inside available for vehicle use. The clicking noise observed is the sound of these contactors as they open and close and is normal operation for your 500e.
- The operating temperature range of the high voltage battery is -22 °F to 122 °F (-30 °C to 50 °C). If it is attempted to operate the vehicle with the battery outside of these temperature extremes it will not function.
500e ELECTRIC VEHICLE FEATURES

Understanding the unique characteristics of your 500e will help ensure maximum performance and the best driving range from your vehicle.

Your 500e is equipped with two electrical systems; a 12 Volt system that is used to power the conventional electrical system and a high voltage system, which is used to drive the wheels through a single-speed transmission as well as other high voltage system components.

Your 500e operates differently than a traditional vehicle or Hybrid vehicle. Here are some of the main differences:

**Audible Pedestrian Warning System**

Your vehicle is equipped with an Audible Pedestrian Warning System. The Audible Pedestrian Warning System uses distinct sounds to alert pedestrians that your vehicle is approaching.

The audible warning system uses an in-car sound synthesizer with a speaker located in the underhood compartment. The warning system is automatically activated when selecting DRIVE or REVERSE.

In DRIVE range, the system will remain active until the vehicle reaches a speed of approximately 22 mph (35.5 km/h). At approximately 22 mph (35.5 km/h), the warning system is deactivated and will automatically be active when the vehicle returns to approximately 20 mph (32 km/h).

**Single-Speed Transmission**

Instead of a traditional transmission, your vehicle is equipped with a single-speed transmission to transfer the torque from the E-Drive motor to the drive wheels. This transmission requires no maintenance and is designed to operate for the life of the vehicle.

**Auto Park**

Auto Park will automatically place the transmission into PARK if there is an indication that the driver may leave the vehicle while still in the DRIVE, NEUTRAL or REVERSE gear. Refer to “Single-Speed Transmission” in “Starting And Operating” for further information.

**E-Park**

The parking pawl is traditionally located inside an automatic transmission and activated when the vehicle is placed in the PARK position.
E-Park is activated when the driver pushes the PARK button. An electric motor activates the parking pawl and locks the single-speed transmission when the vehicle is placed into PARK. This will prevent any unwanted movement of the vehicle.

NOTE: The engagement of the E-Park can be heard when there is no noise in the interior of the vehicle, this is a normal condition.

Climate Control (HVAC System)

Your 500e is equipped with an Automatic Temperature Control (ATC) HVAC system. This HVAC system utilizes a humidity sensor, cabin sensor, and ambient temperature sensor to choose operation mode and control cabin comfort. These components allow the controller to operate the HVAC system in a very efficient manner to maximize driving range.

Your 500e also uses an electric air heater to provide heat to the cabin.

Electric Air Conditioning Compressor

Your 500e uses an electric air conditioning compressor. The air conditioning compressor is powered by the high voltage battery system and is used to cool the vehicle occupants and the high voltage battery while the vehicle is being driven or when it is being charged. The high voltage battery may require cooling to keep the vehicle running. The air conditioning compressor will activate without any input from the occupant.

NOTE: The AC system helps cool the high voltage battery. If the air conditioning system should require service, see your Authorized Dealer as soon as possible.

Electric Power Steering

Your vehicle is equipped with an Electric Power Steering (EPS) system. The power steering system requires no maintenance and operates without the use of power steering fluid.
**Smartphone Features**

With the “Uconnect Access” app, you can monitor the state of charge of the high voltage battery or initiate charging from your phone. You can also turn on your vehicle’s climate control system remotely. The app provides the following features:

- Monitor battery charge level
- Display available driving distance
- Check charging status
- Remotely activate vehicle climate control system
- Unlock and lock doors
- Assist with locating your vehicle
- Locate charging stations
- Send a point-of-interest to your vehicle’s navigation system
- Schedule a charge
- View energy consumed
- Notifications for charging and preconditioning events

**How do I get the “Uconnect Access” smartphone App?**

Visit the 500e registration website:

www.fiatusa.com/500eRegistration

Once in the registration website, you will need to enter your vehicle’s VIN and Connectivity ID. The connectivity ID is found in the vehicle’s instrument cluster. To locate the connectivity ID follow the steps below:

1. Push the menu button on the instrument cluster.
2. Choose “Settings” and scroll down to the “Connectivity ID.”
3. Select “Connectivity ID.”
After obtaining the connectivity ID and VIN number return to the vehicle registration website and perform the following:

1. After entering the VIN (Vehicle Identification Number), Connectivity ID and your email address, click “submit.”

2. You will now be asked to fill in your contact information and a user name and password.

3. Once finished with registration you will be directed to your 500e owner’s site.

4. From the 500e owner’s site you will be able to download the 500e Uconnect Access mobile application and learn how to use your connected features.

5. Use your owner’s site username and password for logging into the 500e Uconnect Access mobile application.

**NOTE:** Your smartphone must have a valid data connection to use the 500e Uconnect Access mobile application.

---

**14 THINGS TO KNOW BEFORE STARTING YOUR VEHICLE**

---

**HIGH VOLTAGE CHARGING OPERATION**

**SAE J1772 Charging Inlet**

Your vehicle uses an industry standard SAE J1772 charge inlet (vehicle charge inlet) for both AC Level 1 (120V) and AC Level 2 (240V) charging.

**NOTE:** The charge inlet door locks and unlocks with the vehicle doors.
AC Level 1 Charging (120V, 15 Amp)

Your vehicle is equipped with a 120 Volt AC, SAE J1772 Level 1 Electric Vehicle Supply Equipment (EVSE), also referred to as a charging cordset. AC Level 1 charging requires a conventional NEMA 5-15 120 Volt AC grounded wall receptacle along with the charging cordset provided with the vehicle.

**WARNING!**

Shock, fire, property damage, or personal injury may occur if the Portable EVSE Cordset is not used properly. There are no serviceable parts contained in the Portable EVSE Cordset. Any attempt to service it may result in shock, fire, property damage, or personal injury.

To access the charging cordset, remove the Level 1 EVSE from its storage bin by lifting the rear cargo cover.

**NOTE:** The charging cordset is used for AC Level 1 charging only.
WARNING!

- Read all the instructions before using this product.
- Unattended children must not have access to the working Portable EVSE Cordset.
- Do not put fingers or objects into the Charge Connector.
- Do not use this product if the flexible power cord or Electric Vehicle (EV) Cable is frayed, broken, has cracked insulation or any other signs of damage.
- Do not use this product if the enclosure or the Charge Connector is broken, cracked, open, or shows any other indication of damage.
- Do not use Portable EVSE Cordset with an extension cord. Use of an extension cord may cause burns, fire, or other damage or injury.
- This device may attempt to reset and run after an interruption.

EVSE Charging Cordset

The EVSE charging cordset is compliant with SAE J1772, and applicable for use with vehicles fitted with the standard SAE J1772 charge inlets. The EVSE includes:

- An AC Power Cord with NEMA 5-15p, Right Angle plug
- An indoor/outdoor charge cable, EV- rated
- A Charge Connector
- A NEMA 6 rated enclosure with a charge current interrupt device (CCID) with status indicator display
Charging Cordset Operation

1. Plug the AC plug of the charging cordset into a 15A, or 20A, 120VAC, 60Hz, grounded wall receptacle. Do not use an extension cord, outlet/plug adapter, or a worn outlet. The charging cordset will not operate safely unless it is plugged directly into the wall receptacle.

**WARNING!**
Improper connection of the equipment-grounding conductor could result in a risk of electric shock. Check with a qualified electrician or serviceman if you are in doubt as to whether the wall receptacle is properly grounded. Do not modify the plug provided with the product – if it does not fit the outlet, you must have a proper outlet installed by a qualified electrician.
2. Check to see if the charging cordset is ready to charge by reviewing the indicator lights. After a brief self-check, where the indicator light will flash, a green AC indicator light and two green charge rate indicator lights indicate that the cordset is ready for use.

3. If the charging cordset is ready to charge, ensure the vehicle is in PARK, and then connect the charge connector to the vehicle’s charge inlet. You will hear a “click” when the charge connector is inserted correctly and coupled with the vehicle’s charge inlet.

4. When the vehicle commences charging, the Charge Rate Indicator Lights will cycle from left to right, and then both turn off. This pattern will repeat while the vehicle is charging. The lights are illuminated at the rate of approximately one cycle per second.
NOTE: The vehicle should start charging automatically. If not, please check the following:

- Charging Cordset - The charging cordset status indicators illuminate green or red to identify the charging cordset status. Refer to “Troubleshooting Using The Status Indicator Display” in this section for further information on the charging cordset status.

- Wall Receptacle – Check whether the wall receptacle is functional (no power outage) and/or plug the charging cordset into a different wall receptacle.

- Charging Schedule – Check whether or not the charging schedules have been enabled. If enabled, check that you are within the scheduled time and date. If a charging schedule has been enabled and you are outside the time and date, you may override the schedule for this charging event by plugging in the charge connector, unplugging it, and then plugging it back into the vehicle charge inlet. Complete the double plug sequence within 10 seconds for it to override the set schedule.

5. To stop the charging process, disconnect the vehicle side connector first and then the charging cordset from the wall receptacle. To disengage the vehicle coupler, push the button on the charge connector before removing the connector from the vehicle charge inlet.

6. Close the inlet door.

NOTE: It is good practice to keep the ignition in the OFF position while conducting Level 1 Charging. This minimizes any additional vehicle loads the EVSE has to support which extend the charging time.
Troubleshooting Using The Status Indicator Display

If the vehicle is not charging properly, consult the status indicator lights.

The AC Power Indicator displays the status and safety of the input power. If this indicator is green, the power is within acceptable limits to charge the vehicle. If only the AC Power Indicator is flashing red, then there is a problem with the AC power at the electrical outlet. If the AC Power Indicator does not return to green, then the outlet should be inspected by a licensed electrician to ensure the voltage, frequency, and grounding are complaint to national and local electrical codes and ordinances. It may be possible to attempt charging from a different outlet.

The Fault Indicator displays the status of the Portable EVSE Cordset and the vehicle connection. The Portable EVSE Cordset will not allow charging while the fault indicator is red. If it is off, the Portable EVSE Cordset has not detected any internal faults, or faults with the vehicle connection. If the Fault Indicator is flashing red, there is a fault detected either with the Portable EVSE Cordset, electronics, or with the vehicle connection. The Portable EVSE Cordset may attempt to retry to provide current to the vehicle if the fault is cleared. If the Fault Indicator does not attempt to provide charge to the vehicle, the charge connector will need to be removed from the vehicle to clear the fault.

The fault code list in the table below provides a reference for the important faults that are detected by the Portable EVSE Cordset. When a fault is detected, the AC Power Indicator, the Fault Indicator, or both the AC Power and Fault Indicators will flash red. If only the AC Power Indicator is red, there is a problem on the AC Power side of the unit. If only the Fault Indicator is flashing red, there is a problem internal to the unit or with the vehicle. If both the AC Power and Fault Indicators are flashing red, an over temperature condition is detected at either the AC plug or within the enclosure. Additional information about the faults is provided by a fault code that is displayed on the two green Charge Rate Indicators. The fault code consists of four digits, each with a value of 1 or 2. The value of a digit is the number of indicators illuminated for that part of the sequence. For example, fault code (1, 2, 1, 1) will display the following sequence: One indicator will illuminate for (0.3 seconds), then two indicators will illuminate, then one indicator, and finally one indicator will illuminate. After all four fault code digits have been displayed, the indicators will remain off for one second before repeating the sequence.

</tbody>
</table>

**FCC Notice:**

This unit has systems that operate on a radio frequency that comply with Part 15 of the Federal Communications Commission (FCC) rules.

Operation is subject to the following two conditions:

1. The device may not cause interference

2. The device must accept any interference received, including interference that may cause undesired operation of the device.

Changes or modifications to any of these systems by other than an authorized service facility could void authorization to use this equipment.

This unit complies with ICES-003E of Industry Canada, and EMC Directive 2004/108/EC.
Guidelines for preventing fire and electric shock:

- Ensure the charging cable is positioned so it will not be stepped on, tripped over, or otherwise subjected to damage or stress.
- There are no user serviceable parts inside.
- Do not use the charging cordset if it is visibly damaged. Contact your authorized dealer for service.
- Do not place fingers, or any other objects inside the charge connector.
- Do not allow children to operate this device. Adult supervision is mandatory when children are in proximity when the charging cordset is in use.

NOTE: During normal operation, the charge connector or AC plug may feel warm. If either one feels hot during charging, unplug the charging cordset and have a qualified electrician inspect the wall receptacle before you continue charging.

**WARNING!**
Do not use the charging cordset with a receptacle that is worn or damaged. Using the charging cordset with a worn or damaged receptacle may cause burns or start a fire.

**Vehicle Charge Indicators**

**Instrument Cluster High Voltage Battery Gauge**

There is a battery gauge indicator located on the instrument cluster. The battery gauge will display, with progressive color indication, the current state of charge for the high voltage battery; with the percentage value located at the bottom of the gauge.
Charge Low And Limited Power Messages

The state of charge is monitored during normal operation. If the state of charge reaches certain thresholds the following messages will also be displayed on the cluster:

- charge low — displayed at 17% (warning displayed for six seconds).
- charge low — displayed at 11% (Displayed for six seconds).
- charge low limited power mode — turtle displayed at 5% and remains on.
- charge low limited power mode — turtle flashes at 0% until condition changes.

NOTE: The limited power mode can also be activated if the high voltage battery temperature is too high or too low.

Charge Low Message

- charge low limited power mode — turtle displayed at 5% and remains on.

Charge Low Limited Power Mode

NOTE: At 0% state of charge or below the following features will be disabled if in use:

- Heated Seats
- Electronic Speed Control
- Climate Controls
Instrument Panel State Of Charge Indicator

In addition to the battery gauge your vehicle is equipped with a visual state of charge indicator. The state of charge indicator is made up of five lights that are mounted to the center of the instrument panel.

State Of Charge Indicator

The state of charge indicator represents the current state of charge for the high voltage battery. The state of charge indicator lights quickly to identify the battery state of charge while the vehicle is being charged. Each light represents the battery’s current percentage of charge.

NOTE: In the event of an error in the charging process the outer two lights will blink.

<table>

AC Level 2 Charging (240V, 30 Amp)

AC Level 2 (240V) charging requires a 240V, Level 2 EVSE (Charging station). A 30A Level 2 EVSE for home installation is recommended.

When using public charging stations, ensure the charging station is ready to provide charge and the vehicle is in PARK before the charge connector is plugged into the vehicle’s charge inlet. You will hear a “click” when the charge connector is inserted correctly and is coupled with the vehicle’s charge inlet. The vehicle should start charging automatically. If not, please check the instructions at the charging station.
NOTE: The vehicle should start charging automatically. If not, please check the following:

- Charging Station – Check the indications and instructions at the charging station.
- Charging Schedule – Check whether the charging schedule is enabled and if so, whether the vehicle is currently within the scheduled charge time/date. If the charging schedule is enabled, you may override them for this charging event by plugging in the charge connector, unplugging it, and then plugging it back into the vehicle charge inlet. Complete the double plug sequence within 10 seconds for it to override the set schedule.

To stop the charging process, disconnect the charge connector from the vehicle inlet.

Charge Times

The following factors determine the time it takes to charge the high voltage battery:

- The high voltage battery’s current state of charge
- What level EVSE is being used (Level 1 – 120V or Level 2 – 240V)
- Ambient temperature
- Whether the vehicle is on during charging

NOTE:

- The charging times are estimates based on a completely discharged high voltage battery.
- Charging times will vary based on the age, condition, state of charge and temperature of the high voltage battery.
- Charging times may be longer if a thermal self-protection reduces the charging current from the EVSE.

<table>

A WORD ABOUT YOUR KEYS

The key fob contains a mechanical integrated key. To use the mechanical key, simply push the mechanical key release button.

The vehicle is supplied with a code card containing key code numbers to order duplicate keys, and the authorized dealer that sold you your new vehicle has the key code numbers for your vehicle locks. These numbers can be used to order duplicate keys.

Ignition Key Removal

1. Place the transmission in PARK.
2. Rotate the key to the OFF/LOCK position.
3. Remove the key from the ignition switch lock cylinder.

Key Fob

1 — Mechanical Key Release Button
2 — Unlock Button
3 — Lock Button
4 — Liftgate Button
WARNING!

• Before exiting a vehicle, always apply the parking brake, place the transmission into PARK, and remove the key fob from the ignition. When leaving the vehicle, always lock your vehicle.

(Continued)

WARNING! (Continued)

• Never leave children alone in a vehicle, or with access to an unlocked vehicle.
• Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the transmission gear selector buttons.
• Do not leave the key fob in or near the vehicle, or in a location accessible to children. A child could operate power windows, other controls, or move the vehicle.
• Do not leave children or animals inside parked vehicles in hot weather. Interior heat build-up may cause serious injury or death.

CAUTION!

An unlocked vehicle is an invitation. Always remove the key from the ignition and lock all the doors when leaving the vehicle unattended.

Ignition Switch Positions
1 — STOP (OFF/LOCK)
2 — MAR (ACC/ON/RUN)
3 — AVV (START)
Locking Doors With A Key

You can insert the key with either side up. To lock the door, turn the key to the left. To unlock the door, turn the key to the right.

Key-In-Ignition Reminder

Opening the driver’s door when the key is in the ignition and the ignition switch position is OFF/LOCK sounds a signal to remove the key.

SENTRY KEY

The Sentry Key Immobilizer System prevents unauthorized vehicle operation by disabling the engine. The system does not need to be armed or activated. Operation is automatic, regardless of whether the vehicle is locked or unlocked.

The system uses ignition keys which have an embedded electronic chip (transponder) to prevent unauthorized vehicle operation. Therefore, only keys that are programmed to the vehicle can be used to start and operate the vehicle.

NOTE: A key which has not been programmed is also considered an invalid key, even if it is cut to fit the ignition switch lock cylinder for that vehicle.

If the vehicle security light is on after the key is turned to the MAR (ACC/ON/RUN) position, it indicates that there is a problem with the electronics.

CAUTION!

- Always remove the Sentry Key from the vehicle and lock all doors when leaving the vehicle unattended.
- The Sentry Key Immobilizer system is not compatible with some aftermarket remote starting systems. Use of these systems may result in vehicle starting problems and loss of security protection.

All of the keys provided with your new vehicle have been programmed to the vehicle electronics.
Replacement Keys

NOTE: Only keys that have been programmed to the vehicle electronics can be used to start the vehicle. Once a Sentry Key has been programmed to a vehicle, it cannot be programmed to any other vehicle. When having the Sentry Key Immobilizer System serviced, bring all vehicle keys with you to an authorized dealer.

The VIN is required for authorized dealer replacement of keys. Duplication of keys may be performed at an authorized dealer.

General Information

The following regulatory statement applies to all radio frequency (RF) devices equipped in this vehicle:

This device complies with Part 15 of the FCC Rules and with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

NOTE: Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

VEHICLE SECURITY ALARM

The vehicle security alarm monitors the vehicle doors for unauthorized entry and the ignition for unauthorized operation. If something triggers the alarm, the vehicle security alarm will provide the following audible and visible signals: the horn will pulse, the park lamps and/or turn signals will flash, and the vehicle security light in the instrument cluster will flash.

To Arm The System

Push the key fob lock button.

To Disarm The System

Push the key fob unlock button or cycle the ignition to the MAR (ACC/ON/RUN) position.
The vehicle security alarm is designed to protect your vehicle. However, you can create conditions where the vehicle security alarm will give you a false alarm. If one of the previously described arming sequences has occurred, the vehicle security alarm will arm regardless of whether you are in the vehicle or not. If you remain in the vehicle and open a door, the alarm will sound. If this occurs, disarm the vehicle security alarm.

If the vehicle security alarm is armed and the battery becomes disconnected, the vehicle security alarm will remain armed when the battery is reconnected. The exterior lights will flash, and the horn will sound. If this occurs, disarm the vehicle security alarm.

**REMOTE KEYLESS ENTRY**

This system allows you to lock or unlock the doors and liftgate from distances up to approximately 66 ft (20 m) using a hand-held key fob. The key fob does not need to be pointed at the vehicle to activate the system.

**NOTE:** The line of transmission must not be blocked with metal objects.

**To Unlock The Doors, Liftgate, And Charge Port Door**

Push and release the unlock button on the key fob once to unlock the driver’s door or twice, within five seconds, to unlock all doors, liftgate, and charge port door. The turn signal lights will flash to acknowledge the unlock signal. The illuminated entry system will also turn on.
Remote Key Unlock, Driver Door/All Doors 1st Press

This feature lets you program the system to unlock either the driver’s door or all doors on the first press of the unlock button on the key fob. Refer to “Uconnect Settings” in “Understanding Your Instrument Panel” for further information.

To Lock The Doors, Liftgate, And Charge Port Door

Push and release the lock button on the key fob to lock all doors, liftgate, and charge port door. The turn signal lights will flash and the horn will chirp to acknowledge the signal.

Key Fob Battery Replacement

NOTE: Perchlorate Material – special handling may apply. See www.dtsc.ca.gov/hazardouswaste/perchlorate.

The recommended replacement battery is CR2032.

1. Push the mechanical key release button and release the mechanical key to access the battery case screw located on the side of the key fob.
2. Rotate the screw located on the side of the key fob using a small screwdriver.

3. Take out the battery case. Remove and replace the battery observing its polarity.

4. Reinstall the battery case inside the key fob and turn the screw to lock it into place.

**General Information**

The following regulatory statement applies to all Radio Frequency (RF) devices equipped in this vehicle:

This device complies with Part 15 of the FCC Rules and with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received,
   including interference that may cause undesired
   operation.

NOTE: Changes or modifications not expressly ap-
proved by the party responsible for compliance could
void the user’s authority to operate the equipment.

DOOR LOCKS
The door locks can be manually locked or unlocked
from inside the vehicle by using the door handle. If the
door handle is pushed, a red lock indicator will show on
the door handle (indicating locked). When the door is
open or closed, the door will lock.

WARNING!
- Do not leave children or animals inside parked
  vehicles in hot weather. Interior heat build-up
  may cause serious injury or death.
- For personal security and safety in the event of an
  collision, lock the vehicle doors as you drive as
  well as when you park and leave the vehicle.

(Continued)
WARNING! (Continued)

- Before exiting a vehicle, always apply the parking brake, place the transmission into PARK, and remove the key fob from the ignition. When leaving the vehicle, always lock your vehicle.
- Never leave children alone in a vehicle, or with access to an unlocked vehicle.
- Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the transmission gear selector buttons.
- Do not leave the key fob in or near the vehicle, or in a location accessible to children. A child could operate power windows, other controls, or move the vehicle.

CAUTION!

An unlocked vehicle is an invitation. Always remove the key from the ignition and lock all of the doors when leaving the vehicle unattended.

Power Door Locks — If Equipped

A power door lock switch is incorporated into the driver door handle. Push or pull the handle to lock or unlock the doors and liftgate. If the driver’s door handle is pushed, a red lock indicator will show on the driver’s door handle (indicating locked). When the door is closed, the door will lock.

NOTE: To prevent the key from being locked in the vehicle, the doors will automatically unlock if the driver’s door handle is pushed when the key is in the ignition.

Power Door Lock Handle
Auto Door Locks

When enabled, the door locks will lock automatically when the vehicle’s speed exceeds 12 mph (20 km/h).

NOTE: Use the Automatic Door Locks feature in accordance with local laws.

Refer to “Uconnect Settings” in “Understanding Your Instrument Panel” for further information.

POWER WINDOWS

Power Window Switches

There are single window controls located on the shifter bezel, below the climate controls, which operate the driver and passenger door windows. The window controls will operate when the ignition switch is in the MAR (ACC/ON/RUN) position.

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Never leave children unattended in a vehicle, and do not let children play with power windows. Do not leave the key fob in or near the vehicle, or in a location accessible to children. Occupants, particularly unattended children, can become entrapped by the windows while operating the power window switches. Such entrapment may result in serious injury or death.</td>
</tr>
</tbody>
</table>

(Continued)
Auto-Down
The driver’s door window switch has an Auto-Down feature. Push the window switch for approximately one second, release, and the window will go down automatically. To cancel the Auto-Down movement, operate the switch in either the up or down direction and release the switch.

Wind Buffeting
Wind buffeting can be described as the perception of pressure on the ears or a helicopter-type sound in the ears. Your vehicle may exhibit wind buffeting with the windows down, or the sunroof (if equipped) in certain open or partially open positions. This is a normal occurrence and can be minimized. If the buffeting occurs with the sunroof open, adjust the sunroof opening to minimize the buffeting or open any window.

LIFTGATE
To unlock the liftgate, use the Remote Keyless Entry key fob or activate the power door lock switches located on the front door handles.

To open the liftgate, squeeze the liftgate release handle and pull the liftgate open with one fluid motion.

Gas props support the liftgate in the open position. However, because the gas pressure drops with temperature, it may be necessary to assist the props when opening the liftgate in cold weather.

OCCUPANT RESTRAINT SYSTEMS
Some of the most important safety features in your vehicle are the restraint systems:

Occupant Restraint Systems Features
• Seat Belt Systems
• Supplemental Restraint Systems (SRS) Air Bags
• Child Restraints
Some of the safety features described in this section may be standard equipment on some models, or may be optional equipment on others. If you are not sure, ask your authorized dealer.

**Important Safety Precautions**

Please pay close attention to the information in this section. It tells you how to use your restraint system properly, to keep you and your passengers as safe as possible.

Here are some simple steps you can take to minimize the risk of harm from a deploying air bag:

1. Children 12 years old and under should always ride buckled up in a vehicle with a rear seat.

2. If a child from 2 to 12 years old (not in a rear-facing child restraint) must ride in the front passenger seat, move the seat as far back as possible and use the proper child restraint (refer to “Child Restraints” in this section for further information).

3. Children that are not big enough to wear the vehicle seat belt properly (refer to “Child Restraints” in this section for further information) should be secured in a vehicle with a rear seat in child restraints or belt-positioning booster seats. Older children who do not use child restraints or belt-positioning booster seats should ride properly buckled up in a vehicle with a rear seat.

4. Never allow children to slide the shoulder belt behind them or under their arm.

5. You should read the instructions provided with your child restraint to make sure that you are using it properly.

6. All occupants should always wear their lap and shoulder belts properly.

7. The driver and front passenger seats should be moved back as far as practical to allow the front air bags room to inflate.

8. Do not lean against the door or window. If your vehicle has side air bags, and deployment occurs, the side air bags will inflate forcefully into the space between occupants and the door and occupants could be injured.

9. If the air bag system in this vehicle needs to be modified to accommodate a disabled person, refer to the “If You Need Consumer Assistance” section for customer service contact information.
WARNING!

- Never place a rear-facing child restraint in front of an air bag. A deploying passenger front air bag can cause death or serious injury to a child 12 years or younger, including a child in a rear-facing child restraint.
- Only use a rear-facing child restraint in a vehicle with a rear seat.

Seat Belt Systems

Buckle up even though you are an excellent driver, even on short trips. Someone on the road may be a poor driver and could cause a collision that includes you. This can happen far away from home or on your own street.

Research has shown that seat belts save lives, and they can reduce the seriousness of injuries in a collision. Some of the worst injuries happen when people are thrown from the vehicle. Seat belts reduce the possibility of ejection and the risk of injury caused by striking the inside of the vehicle. Everyone in a motor vehicle should be belted at all times.

Enhanced Seat Belt Use Reminder System

Driver And Passenger BeltAlert (If Equipped)

BeltAlert is a feature intended to remind the driver and outboard front seat passenger (if equipped with outboard front passenger seat BeltAlert) to buckle their seat belts. The Belt Alert feature is active whenever the ignition switch is in the AVV/START or MAR/ON/RUN position.

Initial Indication

If the driver is unbuckled when the ignition switch is first in the AVV/START or MAR/ON/RUN position, a chime will signal for a few seconds. If the driver or outboard front seat passenger (if equipped with outboard front passenger seat BeltAlert) is unbuckled when the ignition switch is first in the AVV/START or MAR/ON/RUN position the Seat Belt Reminder Light will turn on and remain on until both outboard front seat belts are buckled. The outboard front passenger seat BeltAlert is not active when an outboard front passenger seat is unoccupied.
BeltAlert Warning Sequence

The BeltAlert warning sequence is activated when the vehicle is moving above a specified vehicle speed range and the driver or outboard front seat passenger is unbuckled (if equipped with outboard front passenger seat BeltAlert) (the outboard front passenger seat BeltAlert is not active when the outboard front passenger seat is unoccupied). The BeltAlert warning sequence starts by blinking the Seat Belt Reminder Light and sounding an intermittent chime. Once the BeltAlert warning sequence has completed, the Seat Belt Reminder Light will remain on until the seat belts are buckled. The BeltAlert warning sequence may repeat based on vehicle speed until the driver and occupied outboard front seat passenger seat belts are buckled. The driver should instruct all occupants to buckle their seat belts.

Change Of Status

If the driver or outboard front seat passenger (if equipped with outboard front passenger seat BeltAlert) unbuckles their seat belt while the vehicle is traveling, the BeltAlert warning sequence will begin until the seat belts are buckled again.

THINGS TO KNOW BEFORE STARTING YOUR VEHICLE 41

The outboard front passenger seat BeltAlert is not active when the outboard front passenger seat is unoccupied. BeltAlert may be triggered when an animal or other items are placed on the outboard front passenger seat or when the seat is folded flat (if equipped). It is recommended that pets be restrained in the rear seat (if equipped) in pet harnesses or pet carriers that are secured by seat belts, and cargo is properly stowed.

BeltAlert can be activated or deactivated by your authorized dealer. FCA US LLC does not recommend deactivating BeltAlert.

NOTE: If BeltAlert has been deactivated and the driver or outboard front seat passenger (if equipped with outboard front passenger seat BeltAlert) is unbuckled the Seat Belt Reminder Light will turn on and remain on until the driver and outboard front passenger seat belts are buckled.

Lap/Shoulder Belts

All seating positions in your vehicle are equipped with lap/shoulder belts.
The seat belt webbing retractor will lock only during very sudden stops or collisions. This feature allows the shoulder part of the seat belt to move freely with you under normal conditions. However, in a collision the seat belt will lock and reduce your risk of striking the inside of the vehicle or being thrown out of the vehicle.

**WARNING!**

- Relying on the air bags alone could lead to more severe injuries in a collision. The air bags work with your seat belt to restrain you properly. In some collisions, the air bags won’t deploy at all. Always wear your seat belt even though you have air bags.
- In a collision, you and your passengers can suffer much greater injuries if you are not properly buckled up. You can strike the interior of your vehicle or other passengers, or you can be thrown out of the vehicle. Always be sure you and others in your vehicle are buckled up properly.
- It is dangerous to ride in a cargo area, inside or outside of a vehicle. In a collision, people riding in these areas are more likely to be seriously injured or killed.

---

**WARNING! (Continued)**

- Do not allow people to ride in any area of your vehicle that is not equipped with seats and seat belts.
- Be sure everyone in your vehicle is in a seat and using a seat belt properly. Occupants, including the driver, should always wear their seat belts whether or not an air bag is also provided at their seating position to minimize the risk of severe injury or death in the event of a crash.
- Wearing your seat belt incorrectly could make your injuries in a collision much worse. You might suffer internal injuries, or you could even slide out of the seat belt. Follow these instructions to wear your seat belt safely and to keep your passengers safe, too.
- Two people should never be belted into a single seat belt. People belted together can crash into one another in a collision, hurting one another badly. Never use a lap/shoulder belt or a lap belt for more than one person, no matter what their size.

(Continued)
A lap belt worn too high can increase the risk of injury in a collision. The seat belt forces won’t be at the strong hip and pelvic bones, but across your abdomen. Always wear the lap part of your seat belt as low as possible and keep it snug.

A twisted seat belt may not protect you properly. In a collision, it could even cut into you. Be sure the seat belt is flat against your body, without twists. If you can’t straighten a seat belt in your vehicle, take it to your authorized dealer immediately and have it fixed.

A seat belt that is buckled into the wrong buckle will not protect you properly. The lap portion could ride too high on your body, possibly causing internal injuries. Always buckle your seat belt into the buckle nearest you.

A seat belt that is too loose will not protect you properly. In a sudden stop, you could move too far forward, increasing the possibility of injury. Wear your seat belt snugly.

A seat belt that is worn under your arm is dangerous. Your body could strike the inside surfaces of the vehicle in a collision, increasing head and neck injury. A seat belt worn under the arm can cause internal injuries. Ribs aren’t as strong as shoulder bones. Wear the seat belt over your shoulder so that your strongest bones will take the force in a collision.

A shoulder belt placed behind you will not protect you from injury during a collision. You are more likely to hit your head in a collision if you do not wear your shoulder belt. The lap and shoulder belt are meant to be used together.

A frayed or torn seat belt could rip apart in a collision and leave you with no protection. Inspect the seat belt system periodically, checking for cuts, frays, or loose parts. Damaged parts must be replaced immediately. Do not disassemble or modify the seat belt system. Seat belt assemblies must be replaced after a collision.
Lap/Shoulder Belt Operating Instructions

1. Enter the vehicle and close the door. Sit back and adjust the seat.

2. The seat belt latch plate is above the back of the front seat, and next to your arm in the rear seat (for vehicles equipped with a rear seat). Grasp the latch plate and pull out the seat belt. Slide the latch plate up the webbing as far as necessary to allow the seat belt to go around your lap.

3. When the seat belt is long enough to fit, insert the latch plate into the buckle until you hear a “click.”

4. Position the lap belt so that it is snug and lies low across your hips, below your abdomen. To remove slack in the lap belt portion, pull up on the shoulder belt. To loosen the lap belt if it is too tight, tilt the latch plate and pull on the lap belt. A snug seat belt reduces the risk of sliding under the seat belt in a collision.
5. Position the shoulder belt across the shoulder and chest with minimal, if any, slack so that it is comfortable and not resting on your neck. The retractor will withdraw any slack in the shoulder belt.

6. To release the seat belt, push the red button on the buckle. The seat belt will automatically retract to its stowed position. If necessary, slide the latch plate down the webbing to allow the seat belt to retract fully.

**Lap/Shoulder Belt Untwisting Procedure**

Use the following procedure to untwist a twisted lap/shoulder belt.

1. Position the latch plate as close as possible to the anchor point.

2. At about 6 to 12 inches (15 to 30 cm) above the latch plate, grasp and twist the seat belt webbing 180 degrees to create a fold that begins immediately above the latch plate.

3. Slide the latch plate upward over the folded webbing. The folded webbing must enter the slot at the top of the latch plate.

4. Continue to slide the latch plate up until it clears the folded webbing and the seat belt is no longer twisted.
Seat Belt Extender

If a seat belt is not long enough to fit properly, even when the webbing is fully extended and the adjustable upper shoulder belt anchorage (if equipped) is in its lowest position, your authorized dealer can provide you with a Seat Belt Extender. The Seat Belt Extender should be used only if the existing seat belt is not long enough. When the Seat Belt Extender is not required for a different occupant, it must be removed.

**WARNING!**

- **ONLY** use the Seat Belt Extender if it is physically required in order to properly fit the original seat belt system. **DO NOT USE** the Seat Belt Extender if, when worn, the distance between the front edge of the Seat Belt Extender buckle and the center of the occupant’s body is LESS than 6 inches.
- Using a Seat Belt Extender when not needed can increase the risk of serious injury or death in a collision. Only use the Seat Belt Extender when the lap belt is not long enough and only use in the recommended seating positions. Remove and store the Seat Belt Extender when not needed.

Seat Belts And Pregnant Women

Seat belts must be worn by all occupants including pregnant women: the risk of injury in the event of an accident is reduced for the mother and the unborn child if they are wearing a seat belt.

Position the lap belt snug and low below the abdomen and across the strong bones of the hips. Place the shoulder belt across the chest and away from the neck. Never place the shoulder belt behind the back or under the arm.
Seat Belt Pretensioner

The front seat belt system is equipped with pretensioning devices that are designed to remove slack from the seat belt in the event of a collision. These devices may improve the performance of the seat belt by removing slack from the seat belt early in a collision. Pretensioners work for all size occupants, including those in child restraints.

NOTE: These devices are not a substitute for proper seat belt placement by the occupant. The seat belt still must be worn snugly and positioned properly.

The pretensioners are triggered by the Occupant Restraint Controller (ORC). Like the air bags, the pretensioners are single use items. A deployed pretensioner or a deployed air bag must be replaced immediately.

Energy Management Feature

This vehicle has a seat belt system with an Energy Management feature in the front seating positions that may help further reduce the risk of injury in the event of a collision. The seat belt system has a retractor assembly that is designed to release webbing in a controlled manner.

Switchable Automatic Locking Retractor (ALR)

The seat belts in the passenger seating positions are equipped with a Switchable Automatic Locking Retractor (ALR) which is used to secure a child restraint system. For additional information, refer to “Installing Child Restraints Using The Vehicle Seat Belt” under the “Child Restraints” section of this manual.

The figure below illustrates the locking feature for each seating position.

ALR — Switchable Automatic Locking Retractor

If the passenger seating position is equipped with an ALR and is being used for normal usage, only pull the seat belt webbing out far enough to comfortably wrap
around the occupant’s mid-section so as to not activate the ALR. If the ALR is activated, you will hear a clicking sound as the seat belt retracts. Allow the webbing to retract completely in this case and then carefully pull out only the amount of webbing necessary to comfortably wrap around the occupant’s mid-section. Slide the latch plate into the buckle until you hear a “click.”

In Automatic Locking Mode, the shoulder belt is automatically pre-locked. The seat belt will still retract to remove any slack in the shoulder belt. Use the Automatic Locking Mode anytime a child restraint is installed in a seating position that has a seat belt with this feature. Children 12 years old and under should always be properly restrained in a vehicle with a rear seat.

**How To Engage The Automatic Locking Mode**

1. Buckle the combination lap and shoulder belt.
2. Grasp the shoulder portion and pull downward until the entire seat belt is extracted.
3. Allow the seat belt to retract. As the seat belt retracts, you will hear a clicking sound. This indicates the seat belt is now in the Automatic Locking Mode.

**How To Disengage The Automatic Locking Mode**

Unbuckle the combination lap/shoulder belt and allow it to retract completely to disengage the Automatic Locking Mode and activate the vehicle sensitive (emergency) locking mode.

**WARNING!**

- Never place a rear-facing child restraint in front of an air bag. A deploying passenger front air bag can cause death or serious injury to a child 12 years or younger, including a child in a rear-facing child restraint.
- Only use a rear-facing child restraint in a vehicle with a rear seat.

**WARNING!**

- The seat belt assembly must be replaced if the switchable Automatic Locking Retractor (ALR) feature or any other seat belt function is not working properly when checked according to the procedures in the Service Manual.
- Failure to replace the seat belt assembly could increase the risk of injury in collisions.

(Continued)
• Do not use the Automatic Locking Mode to restrain occupants who are wearing the seat belt or children who are using booster seats. The locked mode is only used to install rear-facing or forward-facing child restraints that have a harness for restraining the child.

Supplemental Restraint Systems (SRS)
Some of the safety features described in this section may be standard equipment on some models, or may be optional equipment on others. If you are not sure, ask your authorized dealer.

The air bag system must be ready to protect you in a collision. The Occupant Restraint Controller (ORC) monitors the internal circuits and interconnecting wiring associated with the electrical Air Bag System Components. Your vehicle may be equipped with the following Air Bag System Components:

Air Bag System Components
• Occupant Restraint Controller (ORC)
• Air Bag Warning Light

Air Bag Warning Light
The ORC monitors the readiness of the electronic parts of the air bag system whenever the ignition switch is in the AVV/START or MAR/ACC/ON/RUN position. If the ignition switch is in the STOP/OFF/LOCK position or in the ACC position, the air bag system is not on and the air bags will not inflate.
The ORC contains a backup power supply system that may deploy the air bag system even if the battery loses power or it becomes disconnected prior to deployment.

The ORC turns on the Air Bag Warning Light in the instrument panel for approximately four to eight seconds for a self-check when the ignition switch is in the MAR/ACC/ON/RUN position. After the self-check, the Air Bag Warning Light will turn off. If the ORC detects a malfunction in any part of the system, it turns on the Air Bag Warning Light, either momentarily or continuously. A single chime will sound to alert you if the light comes on again after initial startup.

The ORC also includes diagnostics that will illuminate the instrument panel Air Bag Warning Light if a malfunction is detected that could affect the air bag system. The diagnostics also record the nature of the malfunction. While the air bag system is designed to be maintenance free, if any of the following occurs, have an authorized dealer service the air bag system immediately:

- The Air Bag Warning Light does not come on during the four to eight seconds when the ignition switch is first in the MAR/ACC/ON/RUN position.
- The Air Bag Warning Light remains on after the four to eight-second interval.
- The Air Bag Warning Light comes on intermittently or remains on while driving.

NOTE: If the speedometer, tachometer, or any engine related gauges are not working, the Occupant Restraint Controller (ORC) may also be disabled. In this condition the air bags may not be ready to inflate for your protection. Have an authorized dealer service the air bag system immediately.

**WARNING!**

Ignoring the Air Bag Warning Light in your instrument panel could mean you won’t have the air bag system to protect you in a collision. If the light does not come on as a bulb check when the ignition is first turned on, stays on after you start the vehicle, or if it comes on as you drive, have an authorized dealer service the air bag system immediately.

Front Air Bags

This vehicle has front air bags and lap/shoulder belts for both the driver and front passenger. The front air bags are a supplement to the seat belt restraint systems.
The driver front air bag is mounted in the center of the steering wheel. The passenger front air bag is mounted in the instrument panel, above the glove compartment. The words “SRS AIRBAG” or “AIRBAG” are embossed on the air bag covers.

**WARNING!**

- Being too close to the steering wheel or instrument panel during front air bag deployment could cause serious injury, including death. Air bags need room to inflate. Sit back, comfortably extending your arms to reach the steering wheel or instrument panel.
- Never place a rear-facing child restraint in front of an air bag. A deploying passenger front air bag can cause death or serious injury to a child 12 years or younger, including a child in a rear-facing child restraint.
- Only use a rear-facing child restraint in a vehicle with a rear seat.

**Front Air Bag And Knee Bolster Locations**

1 — Driver And Passenger Front Air Bags  
2 — Passenger Knee Impact Bolster  
3 — Driver Knee Impact Bolster/Supplemental Driver Knee Air Bag

**Driver And Passenger Front Air Bag Features**

The Advanced Front Air Bag system has multistage driver and front passenger air bags. This system provides output appropriate to the severity and type of collision as determined by the Occupant Restraint Controller (ORC), which may receive information from the front impact sensors (if equipped) or other system components.
The first stage inflator is triggered immediately during an impact that requires air bag deployment. A low energy output is used in less severe collisions. A higher energy output is used for more severe collisions.

This vehicle may be equipped with a driver and/or front passenger seat belt buckle switch that detects whether the driver or front passenger seat belt is buckled. The seat belt buckle switch may adjust the inflation rate of the Advanced Front Air Bags.

This vehicle may be equipped with driver and/or front passenger seat track position sensors that may adjust the inflation rate of the Advanced Front Air Bags based upon seat position.

**WARNING!**

- No objects should be placed over or near the air bag on the instrument panel or steering wheel because any such objects could cause harm if the vehicle is in a collision severe enough to cause the air bag to inflate.
- Do not put anything on or around the air bag covers or attempt to open them manually. You may damage the air bags and you could be injured because the air bags may no longer be functional. The protective covers for the air bag cushions are designed to open only when the air bags are inflating.
- Relying on the air bags alone could lead to more severe injuries in a collision. The air bags work with your seat belt to restrain you properly. In some collisions, air bags won’t deploy at all. Always wear your seat belts even though you have air bags.

**Front Air Bag Operation**

Front Air Bags are designed to provide additional protection by supplementing the seat belts. Front air bags are not expected to reduce the risk of injury in rear, side, or rollover collisions. The front air bags will not deploy in all frontal collisions, including some that may produce substantial vehicle damage — for example, some pole collisions, truck underrides, and angle offset collisions.
On the other hand, depending on the type and location of impact, front air bags may deploy in crashes with little vehicle front-end damage but that produce a severe initial deceleration.

Because air bag sensors measure vehicle deceleration over time, vehicle speed and damage by themselves are not good indicators of whether or not an air bag should have deployed.

Seat belts are necessary for your protection in all collisions, and also are needed to help keep you in position, away from an inflating air bag.

When the ORC detects a collision requiring the front air bags, it signals the inflator units. A large quantity of non-toxic gas is generated to inflate the front air bags.

The steering wheel hub trim cover and the upper right side of the instrument panel separate and fold out of the way as the air bags inflate to their full size. The front air bags fully inflate in less time than it takes to blink your eyes. The front air bags then quickly deflate while helping to restrain the driver and front passenger.

### Knee Impact Bolsters

The Knee Impact Bolsters help protect the knees of the driver and front passenger, and position the front occupants for improved interaction with the front air bags.

**WARNING!**

- Do not drill, cut, or tamper with the knee impact bolsters in any way.
- Do not mount any accessories to the knee impact bolsters such as alarm lights, stereos, citizen band radios, etc.

### Supplemental Driver Knee Air Bag

This vehicle is equipped with a Supplemental Driver Knee Air Bag mounted in the instrument panel below the steering column. The Supplemental Driver Knee Air Bag provides enhanced protection during a frontal impact by working together with the seat belts, pretensioners, and front air bags.
Supplemental Side Air Bags

Your vehicle is equipped with two types of supplemental Side Air Bags:

1. Supplemental Seat-Mounted Side Air Bags (SABs):
   - Located in the outboard side of the front seats. The SABs are marked with a “SRS AIRBAG” or “AIRBAG” label sewn into the outboard side of the seats.

   The SABs may help to reduce the risk of occupant injury during certain side impacts, in addition to the injury reduction potential provided by the seat belts and body structure.

   When the SAB deploys, it opens the seam on the outboard side of the seatback’s trim cover. The inflating SAB deploys through the seat seam into the space between the occupant and the door. The SAB moves at a very high speed and with such a high force that it could injure occupants if they are not seated properly, or if items are positioned in the area where the SAB inflates. Children are at an even greater risk of injury from a deploying air bag.

   **WARNING!**

   Do not use accessory seat covers or place objects between you and the Side Air Bags; the performance could be adversely affected and/or objects could be pushed into you, causing serious injury.
2. Supplemental Side Air Bag Inflatable Curtains (SABICs): Located above the side windows. The trim covering the SABICs is labeled “SRS AIRBAG” or “AIRBAG.”

SABICs may help reduce the risk of head and other injuries to front and rear seat outboard occupants in certain side impacts, in addition to the injury reduction potential provided by the seat belts and body structure.

The SABIC deploys downward, covering the side windows. An inflating SABIC pushes the outside edge of the headliner out of the way and covers the window.

Supplemental Side Air Bag Inflatable Curtain (SABIC) Label Location

SABICs may help reduce the risk of head and other injuries to front and rear seat outboard occupants in certain side impacts, in addition to the injury reduction potential provided by the seat belts and body structure.

The SABIC deploys downward, covering the side windows. An inflating SABIC pushes the outside edge of the headliner out of the way and covers the window.

WARNING!

- Do not stack luggage or other cargo up high enough to block the deployment of the SABICs. The trim covering above the side windows where the SABIC and its deployment path are located should remain free from any obstructions.
- In order for the SABICs to work as intended, do not install any accessory items in your vehicle which could alter the roof. Do not add an aftermarket sunroof to your vehicle. Do not add roof racks that require permanent attachments (bolts or screws) for installation on the vehicle roof. Do not drill into the roof of the vehicle for any reason.
The SABICs and SABs (Side Air Bags) are designed to activate in certain side impacts. The Occupant Restraint Controller (ORC) determines whether the deployment of the Side Air Bags in a particular impact event is appropriate, based on the severity and type of collision. The side impact sensors aid the ORC in determining the appropriate response to impact events. The system is calibrated to deploy the Side Air Bags on the impact side of the vehicle during impacts that require Side Air Bag occupant protection. In side impacts, the Side Air Bags deploy independently; a left side impact deploys the left Side Air Bags only and a right-side impact deploys the right Side Air Bags only. Vehicle damage by itself is not a good indicator of whether or not Side Air Bags should have deployed.

The Side Air Bags will not deploy in all side collisions, including some collisions at certain angles, or some side collisions that do not impact the area of the passenger compartment. The Side Air Bags may deploy during angled or offset frontal collisions where the front air bags deploy.

Side Air Bags are a supplement to the seat belt restraint system. Side Air Bags deploy in less time than it takes to blink your eyes.

**WARNING!**

- Occupants, including children, who are up against or very close to Side Air Bags can be seriously injured or killed. Occupants, including children, should never lean on or sleep against the door, side windows, or area where the side air bags inflate, even if they are in an infant or child restraint.
- Seat belts (and child restraints where appropriate) are necessary for your protection in all collisions. They also help keep you in position, away from an inflating Side Air Bag. To get the best protection from the Side Air Bags, occupants must wear their seat belts properly and sit upright with their backs against the seats. Children must be properly restrained in a child restraint or booster seat that is appropriate for the size of the child.

**WARNING!**

- Side Air Bags need room to inflate. Do not lean against the door or window. Sit upright in the center of the seat.

(Continued)
WARNING! (Continued)

- Being too close to the Side Air Bags during deployment could cause you to be severely injured or killed.
- Relying on the Side Air Bags alone could lead to more severe injuries in a collision. The Side Air Bags work with your seat belt to restrain you properly. In some collisions, Side Air Bags won’t deploy at all. Always wear your seat belt even though you have Side Air Bags.

NOTE: Air bag covers may not be obvious in the interior trim, but they will open during air bag deployment.

The SABICs may help reduce the risk of partial or complete ejection of vehicle occupants through side windows in certain side impact events.

The Occupant Restraint Controller (ORC) monitors the internal circuits and interconnecting wiring associated with electrical Air Bag System Components listed below:

Air Bag System Components
- Occupant Restraint Controller (ORC)
- Air Bag Warning Light
- Steering Wheel and Column
- Instrument Panel
- Knee Impact Bolsters
- Driver and Front Passenger Air Bags
- Supplemental Side Air Bags
- Supplemental Knee Air Bags
- Front and Side Impact Sensors
- Seat Belt Pretensioners
- Seat Track Position Sensors
- Seat Belt Buckle Switch

If A Deployment Occurs

The front air bags are designed to deflate immediately after deployment.

NOTE: Front and/or side air bags will not deploy in all collisions. This does not mean something is wrong with the air bag system.
If you do have a collision which deploys the air bags, any or all of the following may occur:

- The air bag material may sometimes cause abrasions and/or skin reddening to the occupants as the air bags deploy and unfold. The abrasions are similar to friction rope burns or those you might get sliding along a carpet or gymnasium floor. They are not caused by contact with chemicals. They are not permanent and normally heal quickly. However, if you haven’t healed significantly within a few days, or if you have any blistering, see your doctor immediately.

- As the air bags deflate, you may see some smoke-like particles. The particles are a normal by-product of the process that generates the non-toxic gas used for air bag inflation. These airborne particles may irritate the skin, eyes, nose, or throat. If you have skin or eye irritation, rinse the area with cool water. For nose or throat irritation, move to fresh air. If the irritation continues, see your doctor. If these particles settle on your clothing, follow the garment manufacturer’s instructions for cleaning.

Do not drive your vehicle after the air bags have deployed. If you are involved in another collision, the air bags will not be in place to protect you.

**WARNING!**

Deployed air bags and seat belt pretensioners cannot protect you in another collision. Have the air bags, seat belt pretensioners, and the seat belt retractor assemblies replaced by an authorized dealer immediately. Also, have the Occupant Restraint Controller System serviced as well.

**NOTE:**

- Air bag covers may not be obvious in the interior trim, but they will open during air bag deployment.
- After any collision, the vehicle should be taken to an authorized dealer immediately.

**Enhanced Accident Response System**

In the event of an impact, if the communication network remains intact, and the power remains intact, depending on the nature of the event, the ORC will determine whether to have the Enhanced Accident Response System perform the following functions:
• Cut off battery power to the motor.
• Flash hazard lights as long as the battery has power or until the hazard light button is pressed. The hazard lights can be deactivated by pressing the hazard light button.
• Turn on the interior lights, which remain on as long as the battery has power.
• Unlock the power door locks.

Enhanced Accident Response System Reset Procedure

After an event occurs requiring activation of the Enhanced Accident Response System, when the system is active, a "Service Electrical System" message will be displayed on the instrument cluster. The vehicle is not drivable in this state and must be towed to an authorized dealer immediately to be inspected and have the Enhanced Accident Response System reset.

Maintaining Your Air Bag System

WARNING!

• Modifications to any part of the air bag system could cause it to fail when you need it. You could be injured if the air bag system is not there to protect you. Do not modify the components or wiring, including adding any kind of badges or stickers to the steering wheel hub trim cover or the upper right side of the instrument panel. Do not modify the front bumper, vehicle body structure, or add aftermarket side steps or running boards.
• It is dangerous to try to repair any part of the air bag system yourself. Be sure to tell anyone who works on your vehicle that it has an air bag system.
• Do not attempt to modify any part of your air bag system. The air bag may inflate accidentally or may not function properly if modifications are made. Take your vehicle to an authorized dealer for any air bag system service. If your seat, including your trim cover and cushion, needs to
WARNING! (Continued)

be serviced in any way (including removal or loosening/tightening of seat attachment bolts), take the vehicle to your authorized dealer. Only manufacturer approved seat accessories may be used. If it is necessary to modify the air bag system for persons with disabilities, contact your authorized dealer.

Event Data Recorder (EDR)
This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur.

NOTE: EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.
Child Restraints

Everyone in your vehicle needs to be buckled up at all times, including babies and children. Every state in the United States, and every Canadian province, requires that small children ride in proper restraint systems. This is the law, and you can be prosecuted for ignoring it.

Children 12 years or younger should ride properly buckled up in a rear seat, if available. According to crash statistics, children are safer when properly restrained in the rear seats rather than in the front.

### WARNING!

In a collision, an unrestrained child can become a projectile inside the vehicle. The force required to hold even an infant on your lap could become so great that you could not hold the child, no matter how strong you are. The child and others could be badly injured. Any child riding in your vehicle should be in a proper restraint for the child’s size.

There are different sizes and types of restraints for children from newborn size to the child almost large enough for an adult safety belt. Always check the child seat Owner’s Manual to make sure you have the correct seat for your child. Carefully read and follow all the instructions and warnings in the child restraint Owner’s Manual and on all the labels attached to the child restraint.

Before buying any restraint system, make sure that it has a label certifying that it meets all applicable Safety Standards. You should also make sure that you can install it in the vehicle where you will use it.

### NOTE:

- For additional information, refer to www.safercar.gov/parents/index.htm or call: 1–888–327–4236
- Canadian residents should refer to Transport Canada’s website for additional information: http://www.tc.gc.ca/eng/motorvehiclesafety/safedrivers-childsafety-index-53.htm
### Summary Of Recommendations For Restraining Children In Vehicles

<table>
<thead>
<tr>
<th>Child Size, Height, Weight Or Age</th>
<th>Recommended Type Of Child Restraint</th>
</tr>
</thead>
<tbody>
<tr>
<td>Infants and Toddlers</td>
<td>Children who are two years old or younger and who have not reached the height or weight limits of their child restraint</td>
</tr>
<tr>
<td>Small Children</td>
<td>Children who are at least two years old or who have out-grown the height or weight limit of their rear-facing child restraint</td>
</tr>
<tr>
<td>Larger Children</td>
<td>Children who have out-grown their forward-facing child restraint, but are too small to properly fit the vehicle’s seat belt</td>
</tr>
<tr>
<td>Children Too Large for Child Restraints</td>
<td>Children 12 years old or younger, who have out-grown the height or weight limit of their booster seat</td>
</tr>
</tbody>
</table>

### Infant And Child Restraints

Safety experts recommend that children ride rear-facing in the vehicle until they are two years old or until they reach either the height or weight limit of their rear-facing child restraint. Two types of child restraints can be used rear-facing: infant carriers and convertible child seats.
The infant carrier is only used rear-facing in the vehicle. It is recommended for children from birth until they reach the weight or height limit of the infant carrier. Convertible child seats can be used either rear-facing or forward-facing in the vehicle. Convertible child seats often have a higher weight limit in the rear-facing direction than infant carriers do, so they can be used rear-facing by children who have outgrown their infant carrier but are still less than at least two years old. Children should remain rear-facing until they reach the highest weight or height allowed by their convertible child seat.

**WARNING!**

- Never place a rear-facing child restraint in front of an air bag. A deploying passenger front air bag can cause death or serious injury to a child 12 years or younger, including a child in a rear-facing child restraint.
- Only use a rear-facing child restraint in a vehicle with a rear seat.

**Older Children And Child Restraints**

Children who are two years old or who have outgrown their rear-facing convertible child seat can ride forward-facing in the vehicle. Forward-facing child seats and convertible child seats used in the forward-facing direction are for children who are over two years old or who have outgrown the rear-facing weight or height limit of their rear-facing convertible child seat. Children should remain in a forward-facing child seat with a harness for as long as possible, up to the highest weight or height allowed by the child seat.

All children whose weight or height is above the forward-facing limit for the child seat should use a belt-positioning booster seat until the vehicle’s seat belts fit properly. If the child cannot sit with knees bent over the vehicle’s seat cushion while the child’s back is against the seatback, they should use a belt-positioning booster seat. The child and belt-positioning booster seat are held in the vehicle by the seat belt.
WARNING!

- Improper installation can lead to failure of an infant or child restraint. It could come loose in a collision. The child could be badly injured or killed. Follow the child restraint manufacturer’s directions exactly when installing an infant or child restraint.
- After a child restraint is installed in the vehicle, do not move the vehicle seat forward or rearward because it can loosen the child restraint attachments. Remove the child restraint before adjusting the vehicle seat position. When the vehicle seat has been adjusted, reinstall the child restraint.
- When your child restraint is not in use, secure it in the vehicle with a seat belt or LATCH anchorages, or remove it from the vehicle. Do not leave it loose in the vehicle. In a sudden stop or accident, it could strike the occupants or seatbacks and cause serious personal injury.

Children Too Large For Booster Seats

Children who are large enough to wear the shoulder belt comfortably, and whose legs are long enough to bend over the front of the seat when their back is against the seatback, should use the seat belt in a rear seat. Use this simple 5-step test to decide whether the child can use the vehicle’s seat belt alone:

1. Can the child sit all the way back against the back of the vehicle seat?
2. Do the child’s knees bend comfortably over the front of the vehicle seat – while they are still sitting all the way back?
3. Does the shoulder belt cross the child’s shoulder between their neck and arm?
4. Is the lap part of the belt as low as possible, touching the child’s thighs and not their stomach?
5. Can the child stay seated like this for the whole trip?

If the answer to any of these questions was “no,” then the child still needs to use a booster seat in this vehicle. If the child is using the lap/shoulder belt, check seat belt fit periodically and make sure the seat belt buckle is latched. A child’s squirming or slouching can move the belt out of position. If the shoulder belt contacts the face or neck, move the child closer to the center of the vehicle, or use a booster seat to position the seat belt on the child correctly.
**WARNING!**

Never allow a child to put the shoulder belt under an arm or behind their back. In a crash, the shoulder belt will not protect a child properly, which may result in serious injury or death. A child must always wear both the lap and shoulder portions of the seat belt correctly.

Lower Anchors And Tethers For CHildren (LATCH) Restraint System

Your vehicle is equipped with the child restraint anchorage system called LATCH, which stands for Lower Anchors and Tethers for CHildren. The LATCH system has three vehicle anchor points for installing LATCH-equipped child seats. There are two lower anchorages located at the back of the seat cushion where it meets the seatback and one top tether anchorage located behind the seating position. These anchorages are used to install LATCH-equipped child seats without using the vehicle’s seat belts. Some seating positions may have a top tether anchorage but no lower anchorages. In these seating positions, the seat belt must be used with the top tether anchorage to install the child restraint. Please see the following table for more information.

LATCH Positions For Installing Child Restraints In This Vehicle

- Lower Anchorage Symbol (2 Anchorages Per Seating Position)
- Top Tether Anchorage Symbol
What is the weight limit (child’s weight + weight of the child restraint) for using the LATCH anchorage system to attach the child restraint?

<table>
<thead>
<tr>
<th>Frequently Asked Questions About Installing Child Restraints With LATCH</th>
</tr>
</thead>
<tbody>
<tr>
<td>What is the weight limit (child’s weight + weight of the child restraint) for using the LATCH anchorage system to attach the child restraint?</td>
</tr>
<tr>
<td>Can the LATCH anchorages and the seat belt be used together to attach a rear-facing or forward-facing child restraint?</td>
</tr>
<tr>
<td>Can two child restraints be attached using a common lower LATCH anchorage?</td>
</tr>
</tbody>
</table>
Can the rear-facing child restraint touch the back of the front passenger seat?  
Yes  
The child seat may touch the back of the front passenger seat if the child restraint manufacturer also allows contact. See your child restraint owner’s manual for more information.

Can the head restraints be removed?  
Yes  
Yes, all may be removed.

Locating The LATCH Anchorages

The lower anchorages are round bars that are found at the rear of the seat cushion where it meets the seatback, below the anchorage symbols on the seatback. They are just visible when you lean into the rear seat to install the child restraint. You will easily feel them if you run your finger along the gap between the seatback and seat cushion.
Locating The Upper Tether Anchorages

There are tether strap anchorages behind each rear seating position located on the back of the seat.

Rear Seat Tether Strap Mounting
LATCH-compatible child restraint systems will be equipped with a rigid bar or a flexible strap on each side. Each will have a hook or connector to attach to the lower anchorage and a way to tighten the connection to the anchorage. Forward-facing child restraints and some rear-facing child restraints will also be equipped with a tether strap. The tether strap will have a hook at the end to attach to the top tether anchorage and a way to tighten the strap after it is attached to the anchorage.

Center Seat LATCH

WARNING!
This vehicle does not have a center seating position. Do not use the center lower LATCH anchorages to install a child seat in the center of the back seat.

Always follow the directions of the child restraint manufacturer when installing your child restraint. Not all child restraint systems will be installed as described here.

To Install A LATCH-Compatible Child Restraint
If the selected seating position has a Switchable Automatic Locking Retractor (ALR) seat belt, stow the seat belt, following the instructions below. See the section “Installing Child Restraints Using The Vehicle Seat Belt” to check what type of seat belt each seating position has.
1. Loosen the adjusters on the lower straps and on the tether strap of the child seat so that you can more easily attach the hooks or connectors to the vehicle anchorages.

2. Place the child seat between the lower anchorages for that seating position. For some second row seats, you may need to recline the seat and/or raise the head restraint to get a better fit. If the rear seat can be moved forward and rearward in the vehicle, you may wish to move it to its rear-most position to make room for the child seat. You may also move the front seat forward to allow more room for the child seat.

3. Attach the lower hooks or connectors of the child restraint to the lower anchorages in the selected seating position.

4. If the child restraint has a tether strap, connect it to the top tether anchorage. See the section “Installing Child Restraints Using The Top Tether Anchorage” for directions to attach a tether anchor.

5. Tighten all of the straps as you push the child restraint rearward and downward into the seat. Remove slack in the straps according to the child restraint manufacturer’s instructions.

6. Test that the child restraint is installed tightly by pulling back and forth on the child seat at the belt path. It should not move more than 1 inch (25.4 mm) in any direction.

**How To Stow An Unused Switchable-ALR (ALR) Seat Belt**

When using the LATCH attaching system to install a child restraint, stow all ALR seat belts that are not being used by other occupants or being used to secure child restraints. An unused belt could injure a child if they play with it and accidentally lock the seat belt retractor. Before installing a child restraint using the LATCH system, buckle the seat belt behind the child restraint and out of the child’s reach. If the buckled seat belt interferes with the child restraint installation, instead of buckling it behind the child restraint, route the seat belt through the child restraint belt path and then buckle it. Do not lock the seat belt. Remind all children in the vehicle that the seat belts are not toys and that they should not play with them.
WARNING!

• Improper installation of a child restraint to the LATCH anchorages can lead to failure of the restraint. The child could be badly injured or killed. Follow the child restraint manufacturer’s directions exactly when installing an infant or child restraint.
• Child restraint anchorages are designed to withstand only those loads imposed by correctly-fitted child restraints. Under no circumstances are they to be used for adult seat belts, harnesses, or for attaching other items or equipment to the vehicle.

Installing Child Restraints Using The Vehicle Seat Belt

Child restraint systems are designed to be secured in vehicle seats by lap belts or the lap belt portion of a lap/shoulder belt.

WARNING!

• Improper installation or failure to properly secure a child restraint can lead to failure of the restraint. The child could be badly injured or killed.
• Follow the child restraint manufacturer’s directions exactly when installing an infant or child restraint.

The seat belts in the passenger seating positions are equipped with a Switchable Automatic Locking Retractor (ALR) that is designed to keep the lap portion of the seat belt tight around the child restraint so that it is not necessary to use a locking clip. The ALR retractor can be “switched” into a locked mode by pulling all of the webbing out of the retractor and then letting the webbing retract back into the retractor. If it is locked, the ALR will make a clicking noise while the webbing is pulled back into the retractor. Refer to the “Automatic Locking Mode” description in “Switchable Automatic Locking Retractors (ALR)” under “Occupant Restraint Systems” for additional information on ALR.
Please see the table below and the following sections for more information.

Lap/Shoulder Belt Systems For Installing Child Restraints In This Vehicle

### Frequently Asked Questions About Installing Child Restraints With Seat Belts

<table>
<thead>
<tr>
<th>Question</th>
<th>Weight limit of the Child Restraint</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>What is the weight limit (child’s weight + weight of the child restraint) for using the Tether Anchor with the seat belt to attach a forward facing child restraint?</td>
<td>Weight limit of the Child Restraint</td>
<td>Always use the tether anchor when using the seat belt to install a forward facing child restraint, up to the recommended weight limit of the child restraint.</td>
</tr>
<tr>
<td>Can the rear-facing child restraint touch the back of the front passenger seat?</td>
<td>Yes</td>
<td>Contact between the front passenger seat and the child restraint is allowed, if the child restraint manufacturer also allows contact.</td>
</tr>
<tr>
<td>Can the head restraints be removed?</td>
<td>Yes</td>
<td>Yes, all may be removed.</td>
</tr>
<tr>
<td>Can the buckle stalk be twisted to tighten the seat belt against the belt path of the child restraint?</td>
<td>No</td>
<td>Do not twist the buckle stalk in a seating position with an ALR retractor.</td>
</tr>
</tbody>
</table>
Installing A Child Restraint With A Switchable Automatic Locking Retractor (ALR)

Child restraint systems are designed to be secured in vehicle seats by lap belts or the lap belt portion of a lap/shoulder belt.

WARNING!

- Improper installation or failure to properly secure a child restraint can lead to failure of the restraint. The child could be badly injured or killed.
- Follow the child restraint manufacturer’s directions exactly when installing an infant or child restraint.

1. Place the child seat in the center of the seating position. Move the vehicle seat as far rearward as possible to keep the child as far from the advanced passenger air bag as possible.

2. Pull enough of the seat belt webbing from the retractor to pass it through the belt path of the child restraint. Do not twist the belt webbing in the belt path.

3. Slide the latch plate into the buckle until you hear a “click.”

4. Pull on the webbing to make the lap portion tight against the child seat.

5. To lock the seat belt, pull down on the shoulder part of the belt until you have pulled all the seat belt webbing out of the retractor. Then, allow the webbing to retract back into the retractor. As the webbing retracts, you will hear a clicking sound. This means the seat belt is now in the Automatic Locking mode.

6. Try to pull the webbing out of the retractor. If it is locked, you should not be able to pull out any webbing. If the retractor is not locked, repeat step 5.

7. Finally, pull up on any excess webbing to tighten the lap portion around the child restraint while you push the child restraint rearward and downward into the vehicle seat.

8. If the child restraint has a top tether strap and the seating position has a top tether anchorage, connect the tether strap to the anchorage and tighten the tether strap. See the section “Installing Child Restraints Using the Top Tether Anchorage” for directions to attach a tether anchor.
9. Test that the child restraint is installed tightly by pulling back and forth on the child seat at the belt path. It should not move more than 1 inch (25.4 mm) in any direction.

Any seat belt system will loosen with time, so check the belt occasionally, and pull it tight if necessary.

Installing Child Restraints Using The Top Tether Anchorage

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not attach a tether strap for a rear-facing car seat to any location in front of the car seat, including the seat frame or a tether anchorage. Only attach the tether strap of a rear-facing car seat to the tether anchorage that is approved for that seating position, located behind the top of the vehicle seat. See the section “Lower Anchors and Tethers for Children (LATCH) Restraint System” for the location of approved tether anchorages in your vehicle.</td>
</tr>
</tbody>
</table>

1. Look behind the seating position where you plan to install the child restraint to find the tether anchorage. You may need to move the seat forward to provide better access to the tether anchorage. If there is no top tether anchorage for that seating position, move the child restraint to another position in the vehicle if one is available.
2. Route the tether strap to provide the most direct path for the strap between the anchor and the child seat. If your vehicle is equipped with adjustable rear head restraints, raise the head restraint, and where possible, route the tether strap under the head restraint and between the two posts. If not possible, lower the head restraint and pass the tether strap around the outboard side of the head restraint.

3. Attach the tether strap hook of the child restraint to the top tether anchorage as shown in the diagram.

4. Remove slack in the tether strap according to the child restraint manufacturer’s instructions.

**WARNING!**

- An incorrectly anchored tether strap could lead to increased head motion and possible injury to the child. Use only the anchorage position directly behind the child seat to secure a child restraint top tether strap.
- If your vehicle is equipped with a split rear seat, make sure the tether strap does not slip into the opening between the seatbacks as you remove slack in the strap.

**Transporting Pets**

Air Bags deploying in the front seat could harm your pet. An unrestrained pet will be thrown about and possibly injured, or injure a passenger during panic braking or in a collision.

Pets should be restrained in the rear seat in pet harnesses or pet carriers that are secured by seat belts.
SAFETY TIPS

Transporting Passengers

NOTE: Never transport passengers in the cargo area.

WARNING!

- Do not leave children or animals inside parked vehicles in hot weather. Interior heat build-up may cause serious injury or death.
- It is extremely dangerous to ride in a cargo area, inside or outside of a vehicle. In a collision, people riding in these areas are more likely to be seriously injured or killed.
- Do not allow people to ride in any area of your vehicle that is not equipped with seats and seat belts.
- Be sure everyone in your vehicle is in a seat and using a seat belt properly.

Safety Checks You Should Make Inside The Vehicle

Seat Belts

Inspect the seat belt system periodically, checking for cuts, frays, and loose parts. Damaged parts must be replaced immediately. Do not disassemble or modify the system.

Front seat belt assemblies must be replaced after a collision. Rear seat belt assemblies must be replaced after a collision if they have been damaged (i.e., bent retractor, torn webbing, etc.). If there is any question regarding seat belt or retractor condition, replace the seat belt.

Air Bag Warning Light

The Air Bag Warning Light will turn on for four to eight seconds as a bulb check when the ignition is first placed in the MAR (ACC/ON/RUN) position. If the light is either not on during starting, stays on, or turns on while driving, have the system inspected at an authorized dealer as soon as possible. This light will illuminate with a single chime when a fault with the Air Bag Warning Light has been detected, it will stay on until the fault is cleared. If the light comes on
intermittently or remains on while driving, have an authorized dealer service the vehicle immediately. Refer to “Occupant Restraints Systems” for further information.

**Defroster**

Check operation by selecting the defrost mode and place the blower control on high speed. You should be able to feel the air directed against the windshield. See your authorized dealer for service if your defroster is inoperable.

**Floor Mat Safety Information**

Always use floor mats designed to fit the footwell of your vehicle. Use only floor mats that leave the pedal area unobstructed and that are firmly secured so that they cannot slip out of position and interfere with the pedals or impair safe operation of your vehicle in other ways.

---

**WARNING!**

An improperly attached, damaged, folded, or stacked floor mat, or damaged floor mat fasteners may cause your floor mat to interfere with the accelerator, brake, or clutch pedals and cause a loss of vehicle control. To prevent SERIOUS INJURY or DEATH:

- **ALWAYS** securely attach your floor mat using the floor mat fasteners. DO NOT install your floor mat upside down or turn your floor mat over. Lightly pull to confirm mat is secured using the floor mat fasteners on a regular basis.
- **ALWAYS** REMOVE THE EXISTING FLOOR MAT FROM THE VEHICLE before installing any other floor mat. NEVER install or stack an additional floor mat on top of an existing floor mat.
- **ONLY** install floor mats designed to fit your vehicle. NEVER install a floor mat that cannot be properly attached and secured to your vehicle. If a floor mat needs to be replaced, only use a FCA approved floor mat for the specific make, model, and year of your vehicle.
- **ONLY** use the driver’s side floor mat on the driver’s side floor area. To check for interference,
with the vehicle properly parked with the engine off, fully depress the accelerator, the brake, and the clutch pedal (if present) to check for interference. If your floor mat interferes with the operation of any pedal, or is not secure to the floor, remove the floor mat from the vehicle and place the floor mat in your trunk.

- ONLY use the passenger’s side floor mat on the passenger’s side floor area.

- ALWAYS make sure objects cannot fall or slide into the driver’s side floor area when the vehicle is moving. Objects can become trapped under accelerator, brake, or clutch pedals and could cause a loss of vehicle control.

- NEVER place any objects under the floor mat (e.g., towels, keys, etc.). These objects could change the position of the floor mat and may cause interference with the accelerator, brake, or clutch pedals.

- If the vehicle carpet has been removed and re-installed, always properly attach carpet to the floor and check the floor mat fasteners are secure to the vehicle carpet. Fully depress each pedal to check for interference with the accelerator, brake, or clutch pedals then re-install the floor mats.

- It is recommended to only use mild soap and water to clean your floor mats. After cleaning, always check your floor mat has been properly installed and is secured to your vehicle using the floor mat fasteners by lightly pulling mat.

Periodic Safety Checks You Should Make Outside The Vehicle

Tires

Examine tires for excessive tread wear and uneven wear patterns. Check for stones, nails, glass, or other objects lodged in the tread or sidewall. Inspect the tread for cuts and cracks. Inspect sidewalls for cuts, cracks and bulges. Check the wheel bolts for tightness. Check the tires (including spare) for proper cold inflation pressure.
Lights
Have someone observe the operation of brake lights and exterior lights while you work the controls. Check turn signal and high beam indicator lights on the instrument panel.

Door Latches
Check for proper closing, latching, and locking.

Fluid Leaks
Check area under vehicle after overnight parking for coolant or other fluid leaks. If fluid leaks are suspected, the cause should be located and corrected immediately.

**MIRRORS**

**Inside Day/Night Mirror**

The mirror can be adjusted up, down, left, and right for various drivers. The mirror should be adjusted to center on the view through the rear window.

Headlight glare from vehicles behind you can be reduced by moving the small control under the mirror to the night position (toward the rear of the vehicle). The mirror should be adjusted while set in the day position (toward the windshield).

---

**Automatic Dimming Mirror — If Equipped**

This mirror automatically adjusts for headlight glare from vehicles behind you. You can turn the feature on or off by pushing the button at the base of the mirror. The on/off symbol on the button will illuminate when the auto-dimming feature is enabled.

**NOTE:** This feature is disabled when the vehicle is moving in REVERSE.
CAUTION!

To avoid damage to the mirror during cleaning, never spray any cleaning solution directly onto the mirror. Apply the solution onto a clean cloth and wipe the mirror clean.

Power Mirrors

The power mirror controls are located on the driver’s door trim panel.

The power mirror controls consist of a mirror select switch and a four-way mirror control switch. To adjust a mirror, push the mirror select switch to either the L (left) or R (right) to select the mirror you need to adjust. Using the mirror control switch, push on any of the four arrows for the direction that you want the mirror to move.

WARNING!

Vehicles and other objects seen in the passenger side convex mirror will look smaller and farther away than they really are. Relying too much on your passenger side mirror could cause you to collide with another vehicle or other object. Use your inside mirror when judging the size or distance of a vehicle seen in the passenger side convex mirror.

Spotter Mirror — If Equipped

Some models are equipped with a driver’s side spotter mirror. The spotter mirror allows for a greater range of visibility on the driver’s side of the vehicle.
Folding Mirrors
The exterior mirrors are hinged to allow the mirror to pivot forward or rearward to help avoid damage. The mirror has three detent positions: full forward, normal and full rearward.

Heated Mirrors — If Equipped

These mirrors are heated to melt frost or ice. This feature will be activated whenever you turn on the rear window defroster (if equipped). Refer to “Rear Window Features” in “Understanding The Features Of Your Vehicle” for further information.

Sun Visors
The driver and passenger sun visors are located on the headliner, near the front windshield. The sun visors can be rotated downward or up against the door glass. Both sun visors are equipped with courtesy mirrors. To view the courtesy mirror, slide the mirror cover outward.
SEATS

Seats are a part of the Occupant Restraint System of the vehicle.

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
</table>
| • It is dangerous to ride in a cargo area, inside or outside of a vehicle. In a collision, people riding in these areas are more likely to be seriously injured or killed.  
• Do not allow people to ride in any area of your vehicle that is not equipped with seats and seat belts. In a collision, people riding in these areas are more likely to be seriously injured or killed.  
• Be sure everyone in your vehicle is in a seat and using a seat belt properly. |

Forward/Rearward Adjustment

The adjusting bar is located at the front of the seats, near the floor.

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Adjusting a seat while driving may be dangerous. Moving a seat while driving could result in loss of control which could cause a collision and serious injury or death.</td>
</tr>
</tbody>
</table>

(Continued)
WARNING! (Continued)

• Seats should be adjusted before fastening the seat belts and while the vehicle is parked. Serious injury or death could result from a poorly adjusted seat belt.

Recline Adjustment

The recline adjustment lever is located on the inboard side of the seat. To recline the seatback, lift up the recline lever, lean back until the desired position has been reached, and release the lever.

>Recline Lever

WARNING!

Do not ride with the seatback reclined so that the shoulder belt is no longer resting against your chest. In a collision you could slide under the seat belt, which could result in serious injury or death.

Seat Height Adjustment

The driver’s seat height can be raised or lowered by using a lever, located on the outboard side of the seat. Pump the lever upward to raise the seat height, or pump the lever downward to lower the seat height.

>Height Adjuster
EZ Entry Feature
The driver and front passenger seats have an EZ entry feature for rear seat passengers. Pull forward on the release lever, located on the outboard side of the seatback, dump the seatback forward, then slide the seat forward to allow access in and out of the rear seat.

Memory Feature
Both front seats have a memory feature, which can operate in two ways:

Memory Function Option 1 — Full Seat Back And Track Fore/Aft Position Memory:
After using the EZ entry function, the seatback angle and the track fore/aft adjuster can both re-lock into the position they were most recently adjusted to. This is accomplished if the seat is moved fully rearward to its last fore/aft position on the tracks before the seat back is returned upright.

Memory Function Option 2 — Seat Back Only Memory:
After using the EZ entry function, the seat back may first be returned upright prior to going back to the last fore/aft (memory) position on the tracks. This results in the seat back memory being set only – The track will then be locked forward of its last set fore/aft memory position. To then reset the fore/aft track memory feature (to reestablish Memory Function Option 1), the seat has to be returned fully rearward to its last fore/aft memory track position as described in Memory Function Option 1.
Heated Seats

On some models, the front driver and passenger seats may be equipped with heaters in both the seat cushions and seatbacks. The controls for the front heated seats are located on the center instrument panel area.

Push the switch once to turn on the heated seats. Push the switch a second time to shut the heating elements off.

NOTE: Once a heat setting is selected, heat will be felt within two to five minutes.

WARNING!

- Persons who are unable to feel pain to the skin because of advanced age, chronic illness, diabetes, spinal cord injury, medication, alcohol use, exhaustion or other physical condition must exercise care when using the seat heater. It may cause burns even at low temperatures, especially if used for long periods of time.
- Do not place anything on the seat or seatback that insulates against heat, such as a blanket or cushion. This may cause the seat heater to overheat.

(Continued)

WARNING! (Continued)

Sitting in a seat that has been overheated could cause serious burns due to the increased surface temperature of the seat.

Head Restraints

Head restraints are designed to reduce the risk of injury by restricting head movement in the event of a rear impact. Head restraints should be adjusted so that the top of the head restraint is located above the top of your ear.

WARNING!

- All occupants, including the driver, should not operate a vehicle or sit in a vehicle’s seat until the head restraints are placed in their proper positions in order to minimize the risk of neck injury in the event of a crash.
- Head restraints should never be adjusted while the vehicle is in motion. Driving a vehicle with the head restraints improperly adjusted or removed could cause serious injury or death in the event of a collision.
Reactive Head Restraints — Front Seats

The driver and front passenger seats are equipped with Reactive Head Restraints. In the event of a rear impact, the Reactive Head Restraints will automatically extend forward minimizing the gap between the back of the occupant’s head and the Reactive Head Restraint.

To raise the head restraint, pull upward on the head restraint. To lower the head restraint, push the adjustment button, located at the base of the head restraint, and push downward on the head restraint.

The Reactive Head Restraints will automatically return to their normal position following a rear impact. If the Reactive Head Restraints do not return to their normal position, see your authorized dealer immediately.

NOTE: The head restraints should only be removed by qualified technicians, for service purposes only. If either of the head restraints require removal, see your authorized dealer.
WARNING!

- A loose head restraint thrown forward in a collision or hard stop could cause serious injury or death to occupants of the vehicle. Always securely stow removed head restraints in a location outside the occupant compartment.
- ALL the head restraints MUST be reinstalled in the vehicle to properly protect the occupants. Follow the re-installation instructions above prior to operating the vehicle or occupying a seat.
- Do not place items over the top of the Reactive Head Restraint, such as coats, seat covers or portable DVD players. These items may interfere with the operation of the Reactive Head Restraint in the event of a collision and could result in serious injury or death.

Rear Head Restraints

To raise the head restraint, pull upward on the head restraint. To lower the head restraint, push the adjustment button, located at the base of the head restraint, and push downward on the head restraint. Refer to “Occupant Restraints” in “Things To Know Before Starting Your Vehicle” for information on tether routing.

NOTE: To remove the head restraint, raise it as far as it can go then push the release button and the adjustment button at the base of each post while pulling the head restraint up. To reinstall the head restraint, put the head restraint posts into the holes and push downward. Then adjust the head restraint to the appropriate height.
WARNING!
ALL the head restraints MUST be reinstalled in the vehicle to properly protect the occupants. Follow the re-installation instructions above prior to operating the vehicle or occupying a seat.

TO OPEN AND CLOSE THE HOOD
To open the hood, two latches must be released.

1. Pull the bottom of the RED hood release lever, located on the left kick panel, rearward.

2. Slide the safety catch under the front edge of the hood, near the center, to the right. Then raise the hood.

3. Lift the hood prop rod that clips to the right side (left side when standing in front of the hood) of the engine compartment. Place the hood prop rod in the hole of hood hinge to secure the hood in the open position.

Hood Release Lever

Hood Safety Latch Location
In hot climates, the prop rod may be hot. Pick up the prop rod at the foam on the end of the prop rod.

**WARNING!**

Be sure the hood is fully latched before driving your vehicle. If the hood is not fully latched, it could open when the vehicle is in motion and block your vision. Failure to follow this warning could result in serious injury or death.

**CAUTION!**

To prevent possible damage, do not slam the hood to close it. Lower hood to approximately 12 inches (30 cm) and drop the hood to close. Make sure hood is fully closed for both latches. Never drive vehicle unless hood is fully closed, with both latches engaged.

**LIGHTS**

**Multifunction Lever**

The multifunction lever, located on the left side of the steering wheel, controls the operation of the headlights, headlight beam selection, passing light and turn signals.

**NOTE:** The headlights can only be turned on with the ignition in the ON/RUN position.
Headlights

Rotate the end of the multifunction lever upward to the first detent for headlight operation.

NOTE: When the headlights are turned on, the Daytime Running Lights will be deactivated.

High Beams

With the low beams activated, push the multifunction lever towards the instrument panel to turn on the high beams. Pull the multifunction lever toward the steering wheel to turn off the high beams.

Flash-To-Pass

You can signal another vehicle with your headlights by partially pulling the multifunction lever toward the steering wheel. This will cause the high beam headlights to turn on until the lever is released.

Parking Lights

To turn on the parking lights, remove the key or turn the ignition to OFF/LOCK position and turn on the headlights.

Daytime Running Lights

To activate the Daytime Running Lights (DRL), rotate the end of the multifunction lever to the O symbol.

NOTE: The low beams and side/taillights will not be on with DRL.

If allowed by law in the country in which the vehicle was purchased the DRL function can be turned on or off using the display menus. Refer to “Uconnect Settings” in “Understanding Your Instrument Panel” for further information.
Turn Signals

Push the multifunction lever upward to signal a right turn or downward to signal a left turn. The corresponding indicator in the instrument cluster display will blink to indicate the operation of the turn signal.

NOTE: The indicators will automatically turn off when the turn has been completed and the steering wheel is returned to a straight position.

Lane Change Assist

Tap the lever up or down once, without moving beyond the detent, and the turn signal (right or left) will flash three times. Then, the turn signal (right or left) will automatically turn off.

Follow Me Home/Headlight Delay

When this feature is selected, the driver can choose to have the headlights remain on for a preset period of time.

Activation

Remove the key or turn the ignition to the STOP (OFF/LOCK) position, and pull the multifunction lever toward the steering wheel within two minutes. Each time the lever is pulled, the activation of the lights will be extended by 30 seconds. The activation of the lights can be extended to a maximum of 210 seconds.

Deactivation

Pull the multifunction lever toward the steering wheel and hold it for more than two seconds.
Interior Lights

The interior light switches are located in the overhead console. The interior lights can be set to three different positions (Off/Left Position, Center Position, On/Right Position).

Using the switch on the left overhead, push the switch to the right from its center position and the lights are always on. Push the switch to the left from its center position and the lights are always off. Leave the switch in the center position, and the lights are turned on and off when the doors are opened or closed. The switch on the right side of the overhead console controls the map or reading function of the lights. Push the switch to the right to turn on the right light and push the switch to the left to turn on the left light.

CAUTION!

Before getting out of the vehicle be sure that the switch is in the center position or that the lights are off to avoid draining the battery.

Interior Light Timing (Center Position)

There are four different modes of operation that can be activated in this position:

- When one door is opened, a three minute timer is activated.
- When the key is removed from the ignition (within two minutes of the ignition being turned OFF), a 10 second timer is activated.
- When the doors are unlocked with the key fob, a 10 second timer is activated.
- When the doors are locked with the key fob, the lights will turn off.

Interior Light Timing (On/Right Position)

- When all doors are closed a 15-minute timer is activated.

NOTE: The timer is deactivated when the key is moved into the ON/RUN position.
Cargo Area Lights
There is also a courtesy light located in the rear cargo area. Whenever the rear lift gate is opened, the light will turn on and then turn off when the lift gate is closed.

Dimmer Control
The brightness of the instrument panel lighting can be regulated by pushing the buttons on the right side of the instrument cluster. The + increases the brightness and the — decreases the brightness. You can control brightness of the radio by itself or the entire instrument panel. Refer to “Uconnect Settings” in “Understanding Your Instrument Panel” for more information.

Ambient Light
The vehicle is equipped with ambient light on the center stack. The ambient light will be on when the headlights are turned on by rotating the end of the multifunction lever.

Fog Lights — If Equipped
The fog light switch is located on the center stack of the instrument panel, just below the radio.

Push the switch once to turn the front fog lights on. Push the switch a second time to turn the front fog lights off.
WINDSHIELD WIPERS AND WASHERS

The windshield wiper/washer lever is located on the right side of the steering column.

NOTE: The windshield wipers/washers will only operate with the ignition in the ON/RUN position.

Front Windshield Wiper Operation

There are five different modes of operation for the front windshield wipers. The windshield wiper lever can be raised or lowered to access these modes:

Windshield Wiper Off
This is the normal position of the wiper lever.

Intermittent Wiper Operation
Push the lever downward to the first detent. The wipers will operate intermittently.

NOTE: The Intermittent function only has one detent, but wiper delay will vary with changes in vehicle speed. As vehicle speed increases, the delay time will decrease.

Low Speed
Push the lever downward to the second detent. The wipers will operate at low speed.

High Speed
Push the lever downward to the third detent. The wipers will operate at high speed.
Manual High Speed/Mist

Push the lever upward from the off position. The wipers will operate at high speed to clear off road mist or spray from a passing vehicle. This operation will continue until the lever is released. When the lever is released, the wipers will return to the off position and automatically shut off.

Front Windshield Washer Operation

Pull the windshield wiper/washer lever toward the steering wheel to activate the washers. The wipers will activate automatically for three cycles after the lever is released.

**CAUTION!**

- Turn the windshield wipers off when driving through an automatic car wash. Damage to the windshield wipers may result if the wiper control is left in any position other than off.
- In cold weather, always turn off the wiper switch and allow the wipers to return to the “Park” position before turning off the vehicle. If the wiper switch is left on and the wipers freeze to the windshield, damage to the wiper motor may occur when the vehicle is restarted.
- Always remove any buildup of snow that prevents the windshield wiper blades from returning to the off position. If the windshield wiper control is turned off and the blades cannot return to the off position, damage to the wiper motor may occur.
Rear Windshield Wiper

Rotate the end of the windshield wiper/washer lever upward to the first detent past the intermittent settings for intermittent wipe operation. With the front windshield wiper active, rotate the end of the windshield wiper/washer lever upward. The rear wiper will operate in the same mode as the front windshield wipers, but at half the frequency. When the transmission is placed into REVERSE, the rear wiper will automatically operate at Low Speed and return to normal operation when the transmission is placed out of REVERSE.

NOTE: The windshield wipers/washers will only operate with the ignition in the ON/RUN position.

Rear Windshield Washer Operation

Push the windshield wiper/washer lever toward the instrument panel to activate the rear washer. Push and hold the lever for more than a half second and the wipers will activate automatically for three cycles after the lever is released.

TILT STEERING COLUMN — IF EQUIPPED

This feature allows you to tilt the steering column upward or downward. The tilt control lever is located on the left-side of the steering column, below the turn signal controls.
Push down on the lever to unlock the column. With one hand firmly on the steering wheel, move the steering column up or down as desired. Push the lever up to lock the column firmly in place.

**WARNING!**

Do not adjust the steering column while driving. Adjusting the steering column while driving or driving with the steering column unlocked, could cause the driver to lose control of the vehicle. Failure to follow this warning may result in serious injury or death.

**SPEED CONTROL**

When engaged, the Speed Control takes over accelerator operations at speeds greater than 25 mph (40 km/h).

The Speed Control buttons are located on the right side of the steering wheel.
NOTE: In order to ensure proper operation, the Speed Control system has been designed to shut down if multiple Speed Control functions are operated at the same time. If this occurs, the Speed Control system can be reactivated by pushing the Speed Control ON/OFF button and resetting the desired vehicle set speed.

To Activate
Push the ON/OFF button. The cruise control indicator light in the instrument cluster display will illuminate. To turn the system off, push the ON/OFF button a second time. The cruise control indicator light will turn off. The system should be turned off when not in use.

To Set A Desired Speed
Turn the Speed Control on. When the vehicle has reached the desired speed, push the SET (-) button and release. Release the accelerator and the vehicle will operate at the selected speed.

NOTE: The vehicle should be traveling at a steady speed and on level ground before pushing the SET (-) button.

To Deactivate
A soft tap on the brake pedal, pushing the CANC button, or normal brake pressure while slowing the vehicle will deactivate Speed Control without erasing the set speed memory. Pushing the ON/OFF button or turning the ignition switch OFF erases the set speed in memory.

To Resume Speed
To resume a previously set speed, push the RES (+) button and release. Resume can be used at any speed above 20 mph (32 km/h).
To Vary The Speed Setting

To Increase Speed

When the Speed Control is set, you can increase speed by pushing the RES (+) button.

The driver’s preferred units can be selected through the Uconnect settings if equipped. Refer to "Uconnect Settings" in “Understanding Your Instrument Panel” for more information. The speed increment shown is dependent on the selected speed unit of U.S. (mph) or Metric (km/h):

**U.S. Speed (mph)**
- Pushing the RES (+) button once will result in a 1 mph increase in set speed. Each subsequent tap of the button results in an increase of 1 mph.
- If the button is continually pushed, the set speed will continue to increase until the button is released, then the new set speed will be established.

**Metric Speed (km/h)**
- Pushing the RES (+) button once will result in a 1 km/h increase in set speed. Each subsequent tap of the button results in an increase of 1 km/h.
- If the button is continually pushed, the set speed will continue to increase until the button is released, then the new set speed will be established.

To Decrease Speed

When the Speed Control is set, you can decrease speed by pushing the SET (-) button.

The driver’s preferred units can be selected through the Uconnect settings if equipped. Refer to "Uconnect Settings" in “Understanding Your Instrument Panel” for more information. The speed decrement shown is dependent on the selected speed unit of U.S. (mph) or Metric (km/h):

**U.S. Speed (mph)**
- Pushing the SET (-) button once will result in a 1 mph decrease in set speed. Each subsequent tap of the button results in a decrease of 1 mph.
If the button is continually pushed, the set speed will continue to decrease until the button is released, then the new set speed will be established.

**Metric Speed (km/h)**

- Pushing the SET (-) button once will result in a 1 km/h decrease in set speed. Each subsequent tap of the button results in a decrease of 1 km/h.
- If the button is continually pushed, the set speed will continue to decrease until the button is released, then the new set speed will be established.

**To Accelerate For Passing**

Press the accelerator as you would normally. When the pedal is released, the vehicle will return to the set speed.

**Using Speed Control On Hills**

**NOTE:** The Speed Control system maintains speed up and down hills. A slight speed change on moderate hills is normal.

On steep hills, a greater speed loss or gain may occur so it may be preferable to drive without Speed Control.

---

**WARNING!**

Speed Control can be dangerous where the system cannot maintain a constant speed. Your vehicle could go too fast for the conditions, and you could lose control and have an accident. Do not use Speed Control in heavy traffic or on roads that are winding, icy, snow-covered or slippery.

**REAR PARK ASSIST**

The Rear Park Assist system provides audible indications of the distance between the rear fascia/bumper and a detected obstacle when backing up, e.g. during a parking maneuver. Refer to the “Park Assist System Usage Precautions” for the limitations of this system and recommendations.

The Rear Park Assist is automatically activated when the transmission is placed into REVERSE.
Rear Park Assist Sensors

The four Rear Park Assist sensors, located in the rear fascia/bumper, monitor the area behind the vehicle that is within the sensors’ field of view. The sensors can detect obstacles, in the horizontal direction, from approximately 12 inches (30 cm) up to 55 inches (140 cm) from the center of the rear fascia/bumper and up to 24 inches (60 cm) from the corners of the rear fascia/bumper, depending on the location, type and orientation of the obstacle.

If several obstacles are detected, the Rear Park Assist system indicates the nearest obstacle.

The minimum height of a detectable obstacle corresponds to the maximum height of an obstacle that would clear the underside of the vehicle during the parking maneuver.

Rear Park Assist Audible Alerts

If an obstacle is behind the vehicle when the transmission is placed into REVERSE, an audible alert is activated.

The tones emitted by the loudspeaker inform the driver that the vehicle is approaching an obstacle. The pauses between the tones are directly proportional to the distance from the obstacle. Pulses emitted in quick succession indicate the presence of a very close obstacle. A continuous tone indicates that the obstacle is less than 12 inches (30 cm) away.
## Audible And Visual Signals Supplied By The Rear Park Assist System

<table>
<thead>
<tr>
<th>SIGNAL</th>
<th>MEANING</th>
<th>INDICATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Obstacle Distance</td>
<td>An obstacle is present within the sensors’ field of view</td>
<td><strong>Audible signal</strong> (dashboard loud-speaker)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Sound pulses emitted at a rate that increases as the distance decreases.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Emits continuous tone at 12 inches (30 cm).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Adjustable volume level. (Refer to “Instrument Cluster Display” in “Understanding Your Instrument Panel” for further information).</td>
</tr>
<tr>
<td>Failure</td>
<td>Sensor or System failures</td>
<td><strong>Visual Signal</strong> (instrument panel)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Icon appears on display.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Message is displayed on the Instrument Cluster Display (where provided).</td>
</tr>
</tbody>
</table>

While audible signals are emitted, the audio system is not muted.

The audible signal is turned off immediately if the distance increases. The tone cycle remains constant if the distance measured by the inner sensors is constant.

If this condition occurs for the external sensors, the signal is turned off after 3 seconds (stopping warnings during maneuvers parallel to walls).
Failure Indications

A malfunction of the Rear Park Assist sensors or system is indicated, during REVERSE gear engagement, by the instrument panel warning icon and message appearing on the instrument cluster display.

The warning icon is illuminated and a message appears on the instrument cluster display (if equipped). Refer to "Instrument Cluster Display" in “Understanding Your Instrument Panel” for further information.

The sensors and wiring are tested continuously when the ignition is in the ON/RUN position. Failures are indicated immediately if they occur when the system is ON.

Even if the system is able to identify that a specific sensor is in failure condition, the instrument cluster display shall indicate that the Rear Park Assist system is unavailable, without reference to the sensor in failure condition. If even a single sensor fails, the entire system must be disabled. The system is turned off automatically.

Cleaning The Rear Park Assist System

Clean the Rear Park Assist sensors with water, car wash soap and a soft cloth. Do not use rough or hard cloths. In washing stations, clean sensors quickly keeping the vapor jet/high pressure washing nozzles at least 4 inches (10 cm) from the sensors. Do not scratch or poke the sensors. Otherwise, you could damage the sensors.

Park Assist System Usage Precautions

NOTE:

- Ensure that the outer surface and the underside of the rear bumper is clean and clear of snow, ice, mud, dirt or other obstruction to keep the Rear Park Assist system operating properly.
- Jackhammers, large trucks, and other vibrations could affect the performance of Rear Park Assist.
- Clean the Rear Park Assist sensors regularly, taking care not to scratch or damage them. The sensors must not be covered with ice, snow, slush, mud, dirt or debris. Failure to do so can result in the system not working properly. The Rear Park Assist system might not detect an obstacle behind the fascia/bumper, or it could provide a false indication that an obstacle is behind the fascia/bumper.
Objects such as bicycle carriers, etc., must not be placed within 12 inches (30 cm) from the rear fascia/bumper while driving the vehicle. Failure to do so can result in the system misinterpreting a close object as a sensor problem, causing a failure indication to be displayed in the instrument cluster display.

**WARNING!**

- Drivers must be careful when backing up even when using the Rear Park Assist system. Always check carefully behind your vehicle, look behind you, and be sure to check for pedestrians, animals, other vehicles, obstructions, and blind spots before backing up. You are responsible for safety and must continue to pay attention to your surroundings. Failure to do so can result in serious injury or death.

- Before using the Rear Park Assist System, it is strongly recommended that the ball mount and hitch ball assembly is disconnected from the vehicle when the vehicle is not used for towing. Failure to do so can result in injury or damage to vehicles or obstacles because the hitch ball will be much closer to the obstacle than the rear fascia when the warning display turns on the single flashing arc and sounds the continuous tone. Also, the sensors could detect the ball mount and hitch ball assembly, depending on its size and shape, giving a false indication that an obstacle is behind the vehicle.

**CAUTION!**

- Rear Park Assist is only a parking aid and it is unable to recognize every obstacle, including small obstacles. Parking curbs might be temporarily detected or not detected at all. Obstacles located above or below the sensors will not be detected when they are in close proximity.

- The vehicle must be driven slowly when using Rear Park Assist in order to be able to stop in time when an obstacle is detected. It is recommended that the driver looks over his/her shoulder when using Rear Park Assist.

(Continued)
POWER SUNROOF — IF EQUIPPED

The power sunroof switch is located in the overhead console.

**WARNING!**

- Never leave children alone in a vehicle, or with access to an unlocked vehicle. Never leave the key fob in or near the vehicle, or in a location accessible to children. Occupants, particularly unattended children, can become entrapped by the power sunroof while operating the power sunroof switch. Such entrapment may result in serious injury or death.
- In a collision, there is a greater risk of being thrown from a vehicle with an open sunroof. You could also be seriously injured or killed. Always fasten your seat belt properly and make sure all passengers are properly secured.
- Do not allow small children to operate the sunroof. Never allow your fingers, other body parts, or any object to project through the sunroof opening. Injury may result.
To Open

Push and hold the power sunroof switch rearward for approximately one second and the sunroof will stop at the vented position. Push the switch a second time and hold for approximately one second and release, the sunroof will open fully, then stop automatically. This is called “Express Open”. During Express Open operation, any movement of the sunroof switch will stop the sunroof.

To Close

With the sunroof in the full open position, pull the power sunroof button and hold it for approximately one second, the sunroof will return to the vented position. Pull the switch a second time and hold for approximately one second to completely close the sunroof.

Pinch Protect Feature

This feature will detect an obstruction in the opening of the sunroof during Express Close operation. If an obstruction in the path of the sunroof is detected, the sunroof will automatically retract. Remove the obstruction if this occurs. Next, push the switch forward and release to Express Close.

Wind Buffeting

Wind buffeting can be described as the perception of pressure on the ears or a helicopter-type sound in the ears. Your vehicle may exhibit wind buffeting with the windows down, or the sunroof (if equipped) in certain open or partially open positions. This is a normal occurrence and can be minimized. If the buffeting occurs with the rear windows open, open the front and rear windows together to minimize the buffeting. If the buffeting occurs with the sunroof open, adjust the sunroof opening to minimize the buffeting or open any window.

Emergency Operation

In case of electrical failure, the sunroof can be operated with the hex wrench that is located in the glove compartment. There is a plug located in the rear of the sunroof opening at the center of the vehicle. Removing the plug reveals a hex opening in the motor assembly of the sunroof. Insert the hex wrench and turn, moving the sunroof to the desired location.
Sun Shade — If Equipped

For vehicles equipped with either a power sunroof or a fixed glass roof, there is a sun shade that can be open or closed. To open the sun shade, push the tab and move the shade to a full open position.

ELECTRICAL POWER OUTLETS

There is a standard 12 Volt (13 Amp) power outlet, located in the floor console, for added convenience. This power outlet can power mobile phones, electronics and other low power devices.
Power is available when the ignition switch is in the ON/RUN or START position. Insert the cigar lighter or accessory plug into the outlet for use. To preserve the heating element, do not hold the lighter in the heating position.

---

**CAUTION!**

- Do not exceed the maximum power of 160 Watts (13 Amps) at 12 Volts. If the 160 Watts (13 Amps) power rating is exceeded, the fuse protecting the system will need to be replaced.
- Power outlets are designed for accessory plugs only. Do not insert any other object in the power outlets as this will damage the outlet and blow the fuse. Improper use of the power outlet can cause damage not covered by your New Vehicle Limited Warranty.

---

**WARNING!**

To avoid serious injury or death:
- Only devices designed for use in this type of outlet should be inserted into any 12 Volt outlet.
- Do not touch with wet hands.
- Close the lid when not in use and while driving the vehicle.
- If this outlet is mishandled, it may cause an electric shock and failure.
CAUTION!

- Many accessories that can be plugged in draw power from the vehicle's battery, even when not in use (i.e., cellular phones, etc.). Eventually, if plugged in long enough, the vehicle’s battery will discharge sufficiently to degrade battery life and/or prevent the engine from starting.
- Accessories that draw higher power (i.e., coolers, vacuum cleaners, lights, etc.) will degrade the battery even more quickly. Only use these intermittently and with great caution.
- After the use of high power draw accessories, or long periods of the vehicle not being started (with accessories still plugged in), the vehicle must be driven a sufficient length of time to allow the generator to recharge the vehicle’s battery.

CIGAR LIGHTER — IF EQUIPPED

This is located on the center console, in front of the cup holders. To activate the cigar lighter, push and release the knob. After a few seconds the knob automatically returns to its initial position, and the cigar lighter is ready for use.

WARNING!

When the cigar lighter is in use it becomes very hot. To avoid serious injury, handle the cigar lighter with care. Always check that the cigar lighter has turned off.
CUPHOLDERS
For the driver and front passenger, cupholders are located on the floor console between the front seats.

Front Cupholders
For rear passengers, there are cupholders located on the floor between the front driver and passenger seats.

STORAGE
Glove Compartment
The glove compartment is located on the passenger side of the instrument panel.
To open the glove compartment, pull the release handle.

**CARGO AREA FEATURES**

The rear seatbacks have a fold down feature to allow increased cargo capacity.

Push down the release button, located at the outboard top of the seatback and move the seatback to its folded-down position to provide a flat load floor cargo area. When returning the seatback to its upright position, push rearward until the seatback is properly latched.
REAR WINDOW FEATURES

Rear Window Defroster

The rear window defroster button is located in the center of the instrument panel, below the radio. Push this button to turn on the rear window defroster. An indicator in the instrument panel cluster will illuminate when the rear window defroster is on. The rear window defroster automatically turns off after approximately 20 minutes. To manually shut the defroster off, push the button a second time.

CAUTION!

Failure to follow these cautions can cause damage to the heating elements:
• Use care when washing the inside of the rear window. Do not use abrasive window cleaners on the interior surface of the window. Use a soft cloth and a mild washing solution, wiping parallel to the heating elements. Labels can be peeled off after soaking with warm water.
• Do not use scrapers, sharp instruments, or abrasive window cleaners on the interior surface of the window.
• Keep all objects a safe distance from the window.

120 UNDERSTANDING YOUR INSTRUMENT PANEL

INSTRUMENT CLUSTER

Instrument Cluster
Instrument Cluster Descriptions

1. **Battery Charge Gauge**
   - This gauge indicates the charge level of the battery.

2. **Speedometer**
   - Indicates vehicle speed.

3. **Instrument Cluster Display**
   - The instrument cluster display shows messages, when the appropriate conditions exist. Refer to “Instrument Cluster Display” in “Understanding Your Instrument Panel” for further information.

4. **Power Flow Gauge**
   - This gauge indicates how battery energy is being used by the vehicle:
     - ECO Mode (Green): The vehicle is conserving energy.
     - POWER Mode (Red): The vehicle is utilizing energy.
     - CHARGE Mode (Purple): The vehicle is regenerating energy.

**WARNING AND INDICATOR LIGHTS**

The warning/indicator lights switch on in the instrument panel together with a dedicated message and/or acoustic signal when applicable. These indications are indicative and precautionary and as such must not be considered as exhaustive and/or alternative to the information contained in the Owner’s Manual, which you are advised to read carefully in all cases. Always refer to the information in this chapter in the event of a failure indication.

All active telltales will display first if applicable. The system check menu may appear different based upon equipment options and current vehicle status. Some telltales are optional and may not appear.
### Seat Belt Reminder Warning Light

<table>
<thead>
<tr>
<th>Red Telltale Light</th>
<th>What It Means</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Seat Belt Reminder Warning Light" /></td>
<td>When the ignition is first placed in the MAR (ACC/ON/RUN) position, if the driver’s seat belt is unbuckled, a chime will sound and the light will turn on. When driving, if the driver or front passenger seat belt remains unbuckled, the Seat Belt Reminder Light will flash or remain on continuously and a chime will sound. Refer to “Occupant Restraints Systems” in “Things To Know Before Starting Your Vehicle” for further information.</td>
</tr>
</tbody>
</table>

### Air Bag Warning Light

<table>
<thead>
<tr>
<th>Red Telltale Light</th>
<th>What It Means</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Air Bag Warning Light" /></td>
<td>This light will turn on for four to eight seconds as a bulb check when the ignition is placed in the MAR (ACC/ON/RUN) position. If the light is either not on during startup, stays on, or turns on while driving, have the system inspected at an authorized dealer as soon as possible. This light will illuminate with a single chime when a fault with the Air Bag Warning Light has been detected, it will stay on until the fault is cleared. If the light comes on intermittently or remains on while driving, have an authorized dealer service the vehicle immediately.</td>
</tr>
</tbody>
</table>
Brake Warning Light

<table>
<thead>
<tr>
<th>Red Telltale Light</th>
<th>What It Means</th>
</tr>
</thead>
</table>
| Brake Warning Light | This light monitors various brake functions, including brake fluid level and parking brake application. If the brake light turns on it may indicate that the parking brake is applied, that the brake fluid level is low, or that there is a problem with the anti-lock brake system reservoir.

If the light remains on when the parking brake has been disengaged, and the fluid level is at the full mark on the master cylinder reservoir, it indicates a possible brake hydraulic system malfunction or that a problem with the Brake Booster has been detected by the Anti-Lock Brake System (ABS) / Electronic Stability Control (ESC) system. In this case, the light will remain on until the condition has been corrected. If the problem is related to the Brake Booster, the ABS pump will run when applying the brake, and a brake pedal pulsation may be felt during each stop.

NOTE: Brake Warning Light may illuminate due to excessive wear to brake pads. |

The dual brake system provides a reserve braking capacity in the event of a failure to a portion of the hydraulic system. A leak in either half of the dual brake system is indicated by the Brake Warning Light, which will turn on when the brake fluid level in the master cylinder has dropped below a specified level.

The light will remain on until the cause is corrected.

NOTE: The light may flash momentarily during sharp cornering maneuvers, which change fluid level conditions. The vehicle should have service performed, and the brake fluid level checked.

If brake failure is indicated, immediate repair is necessary.
WARNING!

Driving a vehicle with the red brake light on is dangerous. Part of the brake system may have failed. It will take longer to stop the vehicle. You could have a collision. Have the vehicle checked immediately.

Vehicles equipped with the Anti-Lock Brake System (ABS) are also equipped with Electronic Brake Force Distribution (EBD).

CAUTION!

In the event of an EBD failure, the Brake Warning Light will turn on along with the ABS Light. Immediate repair to the ABS system is required.

Electric Power Steering Fail Warning Light — If Equipped

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>[ exclamation ]</td>
<td>Tire Pressure Monitoring System (TPMS) Warning Light</td>
</tr>
<tr>
<td></td>
<td>The warning light switches on and a message is displayed to indicate that the tire pressure is lower than the recommended value and/or that slow pressure loss is occurring. In these cases, optimal tire duration and fuel consumption may not be guaranteed.</td>
</tr>
<tr>
<td></td>
<td>Should one or more tires be in the condition mentioned above, the display will show the indications corresponding to each tire in sequence.</td>
</tr>
</tbody>
</table>

**CAUTION!**

Do not continue driving with one or more flat tires as handling may be compromised. Stop the vehicle, avoiding sharp braking and steering. Repair immediately using the dedicated tire repair kit and contact your authorized dealer as soon as possible.

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size
indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.
CAUTION!

The TPMS has been optimized for the original equipment tires and wheels. TPMS pressures and warning have been established for the tire size equipped on your vehicle. Undesirable system operation or sensor damage may result when using replacement equipment that is not of the same size, type, and/or style. Aftermarket wheels can cause sensor damage. Using aftermarket tire sealants may cause the Tire Pressure Monitoring System (TPMS) sensor to become inoperable. After using an aftermarket tire sealant it is recommended that you take your vehicle to an authorized dealer to have your sensor function checked.

Vehicle Security Indicator Light

<table>
<thead>

</tbody>
</table>

This indicator shows that the high beam headlights are on. Push the multifunction control lever away from you to switch the headlights to high beam. Pull the lever toward you to switch the headlights back to low beam. If the driver’s door is open, and the headlights or park lights are left on, the high beam indicator light will remain illuminated.

**INSTRUMENT CLUSTER DISPLAY**

Your vehicle may be equipped with an instrument cluster display, which offers useful information to the driver. With the ignition in the STOP/OFF position, opening/closing of a door will activate the display for viewing, and display the total miles (kilometers) in the odometer. Your instrument cluster display is designed to display important information about your vehicle’s systems and features. Using a driver interactive display located on the instrument panel, your instrument cluster display can show you how systems are working and give you warnings when they aren’t. The steering wheel mounted controls allow you to scroll through and enter the main menus and submenus. You can access the specific information you want and make selections and adjustments.
Instrument Cluster Display And Controls

The instrument cluster display features a driver-interactive display that is located in the instrument cluster.

 Instrument Cluster Display
The instrument cluster display consists of the following:
- System Status
- Vehicle Information Warning Message Displays
- Outside Temperature Display
- Trip Computer Functions
- Tire Pressure Monitoring Display
- Range

Instrument Cluster Display Control Buttons
The instrument cluster display control buttons are located on the right side of the instrument cluster. There are three control buttons that are used to navigate through the instrument cluster display functions:
- “+” Up Button
- “—” Down Button
- MENU Button
Push and release the **MENU** button briefly to access the instrument cluster display. Push and hold the **MENU** button (approximately one second) to return to the main screen.

Push and release the “+” up button to scroll upward through the displayed menu and the related options or to increase the displayed value.

Push and release the “—” down button to scroll downward through the displayed menu and the related options or to decrease the value displayed.

**NOTE:** The “+” up and “—” down buttons activate different functions according to the following situations:

- To scroll the menu options upwards or downwards.
- To increase or decrease values during settings.

**NOTE:** When opening one of the front doors, the instrument cluster display will turn on the clock and the miles or kilometers covered (if equipped) for a few seconds.

**NOTE:** When the Uconnect “Display Mode” feature is set to “Auto” the instrument cluster display control (+/-) buttons may be used to adjust the brightness of the entire Instrument Panel (e.g. Instrument Cluster, Radio, and Climate Controls). Refer to “Display” located in “Uconnect Settings” for further information.

**Display Menu Set-Up**

The menu comprises a series of functions arranged in a cycle. Push and release the **up** arrow and **down** arrow to access the different options and settings (setup).

The setup menu can be activated by pushing the **MENU** button. Single pushes on the **up** arrow or **down** arrow will scroll through the setup menu options. The menu includes the following functions:

- Battery % Display
- Button Volume
- Stored Warnings
- Tutorial
- Connectivity ID
- Restore Factory Settings
- Exit Menu
Selecting An Option Of The Main Menu Without Submenu:

1. Briefly push and release the MENU button to select the main menu option to set.
2. Push and release the up arrow and down arrow (by single pushes) to select the new setting.
3. Briefly push and release the MENU button to store the new setting and go back to the main menu option previously selected.

Selecting An Option Of The Main Menu With Submenu:

1. Briefly push and release the MENU button to display the first submenu option.
2. Push and release the up arrow and down arrow (by single pushes) to scroll through all the submenu options.
3. Briefly push and release the MENU button to select the displayed submenu option and to open the relevant setup menu.
4. Push and release the up arrow and down arrow (by single pushes) to select the new setting for this submenu option.
5. Briefly push and release the MENU button to store the new setting and go back to the previously selected submenu option.
6. Push and hold the MENU button to return to the main menu (short hold) or the main screen (longer hold).

Trip Computer

The Trip Computer is located in the instrument cluster. It displays trip information such as: average speed, distance traveled, average energy, time traveled, motor power, and tire pressure.
Trip Button

The TRIP button is located on the right steering column stalk.

- A short button push scrolls through the user-selectable information.
- A long button push resets.

The User-Selectable options are:
- Motor Power (Kilowatts)
- Trip A
- Trip B
- Tire Pressure

New Trip

To reset:
- Push and hold the TRIP button manually.
- When the “Trip Distance” reaches 9999.9 miles/kilometers or when the “Elapsed Time” reaches 29.59 (29 hours and 59 minutes) the system will reset automatically.
- Trip can also be reset remotely through the radio.

Trip Functions

Both trip functions are resettable (reset — start of new trip).

“Trip A” can be used to display the figures relating to:
- distance
- avg. energy
- avg. speed
- elapsed time (driving time)
“Trip B” can be used to display the figures relating to:
- distance
- avg. energy
- avg. speed
- elapsed time (driving time)

Values Displayed

Range
This indicates the distance which may be travelled with the remaining battery charge, assuming that driving conditions will not change. The message “----” will appear when the system is initializing.

NOTE: The range depends on several factors: driving style, type of route (freeway, residential, mountain roads, etc.), conditions of use of the car (load, tire pressure, etc.). Trip planning must take into account the above notes.

Distance Traveled
This value shows the distance covered since the last reset.

Average Speed
This value shows the vehicle’s average speed as a function of the overall time elapsed since the last reset.

Average Energy
This value shows the vehicle’s average energy consumption as a function of the overall time elapsed since the last reset.

Elapsed Time
This value shows the time elapsed since the last reset.

CYBERSECURITY
Your vehicle may be a connected vehicle and may be equipped with both wired and wireless networks. These networks allow your vehicle to send and receive information. This information allows systems and features in your vehicle to function properly.

Your vehicle may be equipped with certain security features to reduce the risk of unauthorized and unlawful access to vehicle systems and wireless communications. Vehicle software technology continues to evolve over time and FCA US LLC, working with its suppliers, evaluates and takes appropriate steps as needed. Similar to a computer or other devices, your vehicle may
require software updates to improve the usability and performance of your systems or to reduce the potential risk of unauthorized and unlawful access to your vehicle systems.

The risk of unauthorized and unlawful access to your vehicle systems may still exist, even if the most recent version of vehicle software (such as Uconnect software) is installed.

**WARNING!**

- It is not possible to know or to predict all of the possible outcomes if your vehicle’s systems are breached. It may be possible that vehicle systems, including safety related systems, could be impaired or a loss of vehicle control could occur that may result in an accident involving serious injury or death.
- ONLY insert media (e.g., USB, SD card, or CD) into your vehicle if it came from a trusted source. Media of unknown origin could possibly contain malicious software, and if installed in your vehicle, it may increase the possibility for vehicle systems to be breached.

**WARNING! (Continued)**

- As always, if you experience unusual vehicle behavior, take your vehicle to your nearest authorized dealer immediately.

**NOTE:**

- FCA or your dealer may contact you directly regarding software updates.
- To help further improve vehicle security and minimize the potential risk of a security breach, vehicle owners should:
  - Routinely check www.driveuconnect.com/software-update to learn about available Uconnect software updates.
  - Only connect and use trusted media devices (e.g. personal mobile phones, USBs, CDs).

Privacy of any wireless and wired communications cannot be assured. Third parties may unlawfully intercept information and private communications without your consent. For further information, refer to “Onboard Diagnostic System (OBD II) Cybersecurity” in “Maintaining Your Vehicle”.

(Continued)
UCONNECT RADIOS

For detailed information about your Uconnect radio, refer to your Uconnect Owner’s Manual Supplement.

IPOD/USB/MEDIA PLAYER CONTROL — IF EQUIPPED

This feature allows an iPod or external USB device to be plugged into the USB or AUX port, located in the center console.

UCONNECT SETTINGS

The Uconnect system uses a combination of buttons on the touchscreen and buttons on the faceplate located on the center of the instrument panel that allow you to access and change the customer programmable features. Many features can vary by vehicle.

USB/AUX Port

1 — Auxiliary Cable Jack
2 — USB Connector

Uconnect 5.0/5.0 NAV Buttons On The Touchscreen And Buttons On The Faceplate

1 — Uconnect Buttons On The Touchscreen
2 — Uconnect Buttons On The Faceplate
Buttons On The Faceplate

Buttons on the faceplate are located below, and beside the Uconnect system in the center of the instrument panel. In addition, there is a Scroll/Enter control knob located on the right side. Turn the control knob to scroll through menus and change settings (i.e., 30, 60, 90), push the center of the control knob one or more times to select or change a setting (i.e., ON, OFF).

Your Uconnect system may also have Display Off and back arrow buttons on the faceplate.

Push the Display Off button on the faceplate to turn off the Uconnect screen. Push the Display Off button on the faceplate a second time to turn the screen on.

Push the Back Arrow button on the faceplate to exit out of a Menu or certain option on the Uconnect system.

Buttons On The Touchscreen

Buttons on the touchscreen are accessible on the Uconnect touchscreen.

Customer Programmable Features — Uconnect 5.0/5.0 NAV Settings

Push the Settings button on the faceplate, to display the settings menu screen. In this mode the Uconnect system allows you to access programmable feature settings.

NOTE: Only one touchscreen area may be selected at a time.

When making a selection, press the button on the touchscreen to enter the desired mode. Once in the desired mode, press and release the preferred setting and make your selection. Once the setting is complete, either press the Back Arrow button on the touchscreen or the Back button on the faceplate to return to the previous menu or press the “X” button on the touchscreen to close out of the settings screen. Pressing the Up or Down Arrow buttons on the right side of the screen will allow you to toggle up or down through the available settings.

NOTE: All settings should be changed with the ignition in the “AVV/ACC” position.
After pressing the “Display” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display Mode</td>
<td>Auto</td>
</tr>
<tr>
<td></td>
<td>Manual</td>
</tr>
</tbody>
</table>

**NOTE:** When the “Display Mode” feature is set to “Auto” the radio touchscreen’s brightness will be adjusted with all other instrument panel displays and lights when they are adjusted using the instrument cluster display buttons on the right-hand side of the instrument cluster display. When the “Display Mode” feature is set to “Manual” the radio screen brightness can be adjusted independently using the “Brightness” feature below.

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brightness</td>
<td>+</td>
</tr>
<tr>
<td></td>
<td>–</td>
</tr>
<tr>
<td>Language</td>
<td>English</td>
</tr>
<tr>
<td></td>
<td>Español</td>
</tr>
<tr>
<td></td>
<td>Français</td>
</tr>
<tr>
<td>Touchscreen Beep</td>
<td>On</td>
</tr>
<tr>
<td></td>
<td>Off</td>
</tr>
<tr>
<td>Charge Low Pop-Up</td>
<td>On</td>
</tr>
<tr>
<td></td>
<td>Off</td>
</tr>
</tbody>
</table>

**NOTE:** When in the “Charge Low Pop-Up” display, you may turn on or shut off a low charge indicator.
Units

After pressing the “Units” button on the touchscreen, you may select each unit of measure independently displayed in the instrument cluster display. The following selectable units of measure are listed below:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>US</td>
<td>Changes the instrument cluster display to US units of measure.</td>
</tr>
<tr>
<td>Metric</td>
<td>Changes the instrument cluster display to Metric units of measure.</td>
</tr>
</tbody>
</table>

After pressing the “Custom” button on the touchscreen, you may select from the following menu items:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance</td>
<td>mi</td>
</tr>
<tr>
<td>Pressure</td>
<td>psi</td>
</tr>
<tr>
<td>Temperature</td>
<td>°C</td>
</tr>
<tr>
<td>Energy</td>
<td>MPGe</td>
</tr>
</tbody>
</table>
Voice

After pressing the “Voice” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Voice Response Length</td>
<td>Brief, Long</td>
</tr>
<tr>
<td>Show Command List</td>
<td>Always, With Help, Never</td>
</tr>
</tbody>
</table>

Clock & Date

After pressing the “Clock & Date” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set Time and Format</td>
<td>12 hour, 24 hour</td>
</tr>
<tr>
<td>Show Time Status</td>
<td>On, Off</td>
</tr>
<tr>
<td>Set Date</td>
<td>On, Off</td>
</tr>
</tbody>
</table>

**NOTE:** Press the corresponding arrow above and below the current time to adjust, then select “AM” or “PM.”

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sync Time — If Equipped</td>
<td>On, Off</td>
</tr>
</tbody>
</table>

**NOTE:** When in the “Sync Time” display, you may sync the time with GPS.
Charging Schedule
To set up a charging schedule, press the “More” or “Settings” button on the touchscreen.

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Schedule</td>
<td>☑</td>
</tr>
</tbody>
</table>

NOTE:
Continue setting up the schedule, picking from the following menus:
• Weekdays or Weekends
• Start and End Times

Safety/Assistance
After pressing the “Safety/Assistance” button on the touchscreen, the following setting will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hill Start Assist</td>
<td>On Off</td>
</tr>
</tbody>
</table>
Lights

After pressing the “Lights” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Daytime Running Lights</td>
<td>On</td>
</tr>
</tbody>
</table>

Doors & Locks

After pressing the “Doors & Locks” button on the touchscreen, the following setting will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto Door Locks</td>
<td>On</td>
</tr>
</tbody>
</table>

**NOTE:** When the “Auto Door Locks” feature is selected, all doors will lock automatically when the vehicle reaches a speed of 12 mph (20 km/h).

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remote Door Unlock/Door Unlock</td>
<td>Driver</td>
</tr>
</tbody>
</table>

**NOTE:** When “Driver” is selected, only the driver’s door will unlock on the first push of the key fob unlock button, you must push the key fob unlock button twice to unlock the passenger’s doors. When “All” is selected, all of the doors will unlock on the first press of the key fob unlock button.
Engine Off Options
After pressing the “Engine Off Options” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Radio Off Delay</td>
<td>0 min. 20 min.</td>
</tr>
</tbody>
</table>

Audio
After pressing the “Audio” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Equalizer</td>
<td>+ -</td>
</tr>
</tbody>
</table>

NOTE:
- When in the “Equalizer” display, you may adjust the Bass, Mid and Treble settings.
- Bass/Mid/Treble allow you to simply slide your finger up or down to change the setting as well as press directly on the desired setting.

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Balance/Fade</td>
<td></td>
</tr>
<tr>
<td>Auto-On Radio</td>
<td>On Off Recall Last</td>
</tr>
</tbody>
</table>

NOTE: When the “Auto-On Radio” feature is selected, the radio automatically turns on when vehicle is in run or will recall whether it was on or off at last ignition off.
### Setting Name | Selectable Options
--- | ---
Radio Off With Door | On | Off

**NOTE:** When the “Radio Off With Door” feature is selected, the radio will remain on until the driver or passenger door is opened or when the Radio Off Delay time expires.

### Phone/Bluetooth

After pressing the “Phone/Bluetooth” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Paired Phones</td>
<td>List of Paired Phones</td>
</tr>
</tbody>
</table>

**NOTE:** The “Paired Phones” feature shows which phones are paired to the Phone/Bluetooth system. For further information, refer to the Uconnect Owner’s Manual Supplement.

### SiriusXM Setup — If Equipped

After pressing the “SiriusXM Setup” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tune Start</td>
<td>On</td>
</tr>
</tbody>
</table>
**Setting Name** | **Selectable Options**
--- | ---
**NOTE:** “Tune Start” begins playing the current song from the beginning when you tune to a music channel using one of the twelve presets, so you can enjoy the complete song. This feature occurs the first time the preset is selected during that current song. Tune Start works in the background, so you will not even realize it’s on, except that you will miss the experience of joining your favorite song with only a few seconds left to play.

**Channel Skip** | **Channel Skip**

**NOTE:** SiriusXM can be programmed to designate a group of channels that are the most desirable to listen to or to exclude undesirable channels while scanning.

**Subscription Information** | **Subscription Info**

**NOTE:**
- New vehicle purchasers or lessees will receive a free limited time subscription to SiriusXM Satellite Radio with your radio. Following the expiration of the free services, it will be necessary to access the information on the Subscription Information screen to re-subscribe.
- Write down the SIRIUS ID numbers for your receiver. To reactivate your service, either call the number listed on the screen or visit the provider online.

**NOTE:** SiriusXM Travel Link is a separate subscription and is available for U.S. residents only.
After pressing the “Restore Settings” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restore Settings</td>
<td>Yes No</td>
</tr>
</tbody>
</table>

NOTE: When the “Restore Settings” feature is selected it will reset the Display, Clock, Audio, and Radio Settings to their default settings. To restore the settings to their default setting, press the Restore Settings button. A pop-up will appear asking “Are you sure you want to reset your settings to default?” Once the settings are restored, a pop-up appears stating “settings reset to default”.

After pressing the “Clear Personal Data Settings” button on the touchscreen, the following settings will be available:

<table>
<thead>
<tr>
<th>Setting Name</th>
<th>Selectable Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clear Personal Data</td>
<td>Yes No</td>
</tr>
</tbody>
</table>

NOTE: When this feature is selected, it will remove personal data including Bluetooth devices and presets. To remove personal information, press the “Clear Personal Data” button and a pop-up will appear asking “Are you sure you want to clear all personal data?” Once the data has been cleared, a pop-up appears stating “Personal data cleared”.

154 UNDERSTANDING YOUR INSTRUMENT PANEL
UCONNECT 5.0/5.0 NAV VOICE RECOGNITION
QUICK TIPS

Introducing Uconnect

Start using Uconnect Voice Recognition with these helpful quick tips. It provides the key Voice Commands and tips you need to know to control your Uconnect system.

Get Started

1. Visit UconnectPhone.com to check mobile device and feature compatibility and to find phone pairing instructions.

2. Reduce background noise. Wind and passenger conversations are examples of noise that may impact recognition.

3. Speak clearly at a normal pace and volume while facing straight ahead. The microphone is positioned on the rearview mirror and aimed at the driver.

4. Each time you give a Voice Command, you must first push either the VR or PHONE button, wait until after the beep, then say your Voice Command.

5. You can interrupt the help message or system prompts by pushing the VR or PHONE button and saying a Voice Command from current category.
All you need to control your Uconnect system with your voice are the buttons on your steering wheel.

**Basic Voice Commands**

The basic Voice Commands below can be given at any point while using your Uconnect system.

Push the VR button \(\text{\textregistered}\). After the beep, say...

- **Cancel** to stop a current voice session
- **Help** to hear a list of suggested Voice Commands
- **Repeat** to listen to the system prompts again

Notice the visual cues that inform you of your voice recognition system’s status. Cues appear on the touchscreen.

**VR And Phone Buttons**

1. Push to MUTE
2. Push To Initiate Or To Answer A Phone Call, Send Or Receive A Text
3. Push To End Call
4. Push To Begin Radio Or Media Functions
Radio

Use your voice to quickly get to the AM, FM or SiriusXM Satellite Radio stations you would like to hear. (Subscription or included SiriusXM Satellite Radio trial required.)

Push the VR button \( \text{ VR } \). After the beep, say...

- **Tune to** ninety-five-point-five FM
- **Tune to** Satellite Channel Hits 1

**TIP:** At any time, if you are not sure of what to say or want to learn a Voice Command, push the VR button \( \text{ VR } \) and say **Help**. The system will provide you with a list of commands.

Media

Uconnect offers connections via USB, Bluetooth and Auxiliary ports (If Equipped). Voice operation is only available for connected USB and iPod devices.

Push the VR button \( \text{ VR } \). After the beep, say one of the following commands and follow the prompts to switch your media source or choose an artist.

- **Change source** to Bluetooth
- **Change source** to iPod
- **Change source** to USB
• Play artist Beethoven; Play album Greatest Hits; Play song Moonlight Sonata; Play genre Classical

TIP: Press the “Browse” button on the touchscreen to see all of the music on your iPod or USB device. Your Voice Command must match exactly how the artist, album, song and genre information is displayed.

Voice Text Reply

Uconnect will announce incoming text messages. Push the PHONE button and say Listen. (Must have compatible mobile phone paired to Uconnect system.)

1. Once an incoming text message is read to you, push the PHONE button . After the beep, say... “Reply.”

2. Listen to the Uconnect prompts. After the beep, repeat one of the pre-defined messages and follow the system prompts.

<table>
<thead>
<tr>
<th>PRE-DEFINED VOICE TEXT REPLY RESPONSES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes.</td>
</tr>
<tr>
<td>No.</td>
</tr>
<tr>
<td>Okay.</td>
</tr>
<tr>
<td>Call me.</td>
</tr>
<tr>
<td>I’ll call you later.</td>
</tr>
<tr>
<td>I’m on my way.</td>
</tr>
<tr>
<td>I’m lost.</td>
</tr>
</tbody>
</table>
TIP: Your mobile phone must have the full implementation of the Message Access Profile (MAP) to take advantage of this feature. For details about MAP, visit UconnectPhone.com. Apple iPhone iOS6 or later supports reading incoming text messages only.

Radio Operation And Mobile Phones

Under certain conditions, the mobile phone being on in your vehicle can cause erratic or noisy performance from your radio. This condition may be lessened or eliminated by relocating the mobile phone antenna. This condition is not harmful to the radio. If your radio performance does not satisfactorily “clear” by the repositioning of the antenna, it is recommended that the radio volume be turned down or off during mobile phone operation.

Harmful Interference Statement

This device complies with Part 15 of the FCC rules and RSS 210 of Industry Canada. Operation is subject to the following conditions:

• This device may not cause harmful interference.
• This device must accept any interference received, including interference that may cause undesired operation.

NOTE: Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Additional Information

© 2016 FCA US LLC. All rights reserved. Mopar and Uconnect are registered trademarks and Mopar Owner Connect is a trademark of FCA US LLC. Android is a trademark of Google Inc. SiriusXM and all related marks and logos are trademarks of SiriusXM Radio Inc.

For Uconnect system support, call 1-877-855-8400 (24 hours a day 7 days a week) or visit DriveUconnect.com.
STEERING WHEEL AUDIO CONTROLS

The remote sound system controls are located on the rear surface of the steering wheel. Reach behind the wheel to access the switches.

The right-hand control is a rocker-type switch with a pushbutton in the center and controls the volume and mode of the sound system. Pushing the top of the rocker switch will increase the volume, and pushing the bottom of the rocker switch will decrease the volume.

Pushing the center button will make the radio switch between the various modes available (AM/FM/SAT/AUX/Media Player, etc.) and can also be used to select/enter an item while scrolling through menu.

The left-hand control is a rocker-type switch with a push-button in the center. The function of the left-hand control is different depending on which mode you are in.

The following describes the left-hand control operation in each mode.

Radio Operation

Pushing the top of the switch will “Seek” up for the next listenable station and pushing the bottom of the switch will “Seek” down for the next listenable station.

The button located in the center of the left-hand control will tune to the next preset station that you have programmed in the radio preset button.
RADIO OPERATION AND MOBILE PHONES

Under certain conditions, the mobile phone being on in your vehicle can cause erratic or noisy performance from your radio. This condition may be lessened or eliminated by relocating the mobile phone antenna. This condition is not harmful to the radio. If your radio performance does not satisfactorily “clear” by the repositioning of the antenna, it is recommended that the radio volume be turned down or off during mobile phone operation.

TELEMATICS MODEM

Your vehicle is equipped with a 3G CDMA cellular modem to connect the vehicle with your device to provide the following features:

- Range and State of Charge Information
- Configure Scheduled Charging Profile
- Average and total energy used
- Charge station location and availability on in vehicle NAV map
- Send navigation destination to vehicle from within Mobile App
- Remote Door Lock/Unlock
- Remote Horn and Lights Activation
- Pre-conditioning of interior temperature
- Email and SMS notifications

NOTE: This device complies with Part 15 of the FCC. Operation is subject to the following conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

<tr>
<td>OFF</td>
<td><strong>Climate Control Off Button</strong>&lt;br&gt;Push and release this button to turn the Climate Control on/off.</td>
</tr>
<tr>
<td></td>
<td><strong>Temperature Up And Down Button</strong>&lt;br&gt;Provides the passengers with temperature control. Push the Up button on the faceplate for warmer temperature settings. Push the Down button on the faceplate for cooler temperature settings.</td>
</tr>
</tbody>
</table>
CAUTION!

Failure to follow these cautions can cause damage to the heating elements:

- Use care when washing the inside of the rear window. Do not use abrasive window cleaners on the interior surface of the window. Use a soft cloth and a mild washing solution, wiping parallel to the heating elements. Labels can be peeled off after soaking with warm water.
- Do not use scrapers, sharp instruments, or abrasive window cleaners on the interior surface of the window.
- Keep all objects a safe distance from the window.

Climate Control Functions

A/C (Air Conditioning)

The Air Conditioning (A/C) button allows the operator to manually activate or deactivate the air conditioning system. When the air conditioning system is turned on, cool dehumidified air will flow through the outlets into the cabin. For improved fuel economy, push the A/C button to turn off the air conditioning and manually adjust the blower and airflow mode settings. Also, make sure to select only Panel, Bi-Level or Floor modes.

NOTE:

- If fog or mist appears on the windshield or side glass, select Defrost mode and increase blower speed if needed.
- If your air conditioning performance seems lower than expected, check the front of the A/C condenser (located in front of the radiator), for an accumulation of dirt or insects. Clean with a gentle water spray from the front of the radiator and through the condenser.
Recirculation
When outside air contains smoke, odors, or high humidity, or if rapid cooling is desired, you may wish to recirculate interior air by pushing the Recirculation control button. The recirculation indicator will illuminate when this button is selected. Push the button a second time to turn off the Recirculation mode and allow outside air into the vehicle.

NOTE: In cold weather, use of recirculation mode may lead to excessive window fogging. The recirculation feature may be unavailable (button on the touchscreen greyed out) if conditions exist that could create fogging on the inside of the windshield. On systems with Manual Climate Controls, the Recirculation mode is not allowed in Defrost mode to improve window clearing operation. Recirculation will be disabled automatically if this mode is selected. Attempting to use Recirculation while in this mode will cause the LED in the control button to blink and then turn off.

Automatic Temperature Control (ATC) — If Equipped

Automatic Operation
1. Push the AUTO button on the faceplate.

2. Next, adjust the temperature you would like the system to maintain by adjusting the driver and passenger temperature control buttons. Once the desired temperature is displayed, the system will achieve and automatically maintain that comfort level.

3. When the system is set up for your comfort level, it is not necessary to change the settings. You will experience the greatest efficiency by simply allowing the system to function automatically.

NOTE:
• It is not necessary to move the temperature settings for cold or hot vehicles. The system automatically adjusts the temperature, mode, and blower speed to provide comfort as quickly as possible.
• The temperature can be displayed in U.S. or Metric units by selecting the US/Metric customer-programmable feature.
To provide you with maximum comfort in the Automatic mode during cold start-ups, the blower fan will remain on low until the engine warms up. The blower will increase in speed and transition into Auto mode.

**Manual Operation Override**

This system offers a full complement of manual override features. The AUTO symbol in the front ATC display will be turned off when the system is being used in the manual mode.

**NOTE:** The system will not automatically sense the presence of fog, mist or ice on the windshield. DE-FROST mode must be manually selected to clear the windshield and side glass.

**Operating Tips**

**NOTE:** Refer to the chart at the end of this section for suggested control settings for various weather conditions.

---

**Summer Operation**

The engine cooling system must be protected with a high-quality antifreeze coolant to provide proper corrosion protection and to protect against engine overheating. OAT coolant (conforming to MS.90032) is recommended. Refer to “Maintenance Procedures” in “Maintaining Your Vehicle” for proper coolant selection.

**Winter Operation**

To ensure the best possible heater and defroster performance, make sure the engine cooling system is functioning properly and the proper amount, type, and concentration of coolant is used. Refer to “Maintenance Procedures” in “Maintaining Your Vehicle” for proper coolant selection. Use of the air Recirculation mode during Winter months is not recommended because it may cause window fogging.
Vacation/Storage

Before you store your vehicle, or keep it out of service (i.e., vacation) for two weeks or more, run the air conditioning system at idle for about five minutes, in fresh air with the blower setting on high. This will ensure adequate system lubrication to minimize the possibility of compressor damage when the system is started again.

Window Fogging

Vehicle windows tend to fog on the inside in mild, rainy and/or humid weather. To clear the windows, select Defrost or Mix mode and increase the front blower speed. Do not use the Recirculation mode without A/C for long periods, as fogging may occur.

Outside Air Intake

Make sure the air intake, located directly in front of the windshield, is free of obstructions such as leaves. Leaves collected in the air intake may reduce airflow, and if they enter the plenum, they could plug the water drains. In winter months, make sure the air intake is clear of ice, slush, and snow.

A/C Air Filter

The climate control system filters out dust and pollen from the air. Contact your authorized dealer to service your A/C air filter, and to have it replaced when needed.

STARTING PROCEDURES

Before starting your vehicle, adjust your seat, adjust both inside and outside mirrors, and fasten your seat belts.

**WARNING!**

- Never leave children alone in a vehicle, or with access to an unlocked vehicle.
- Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the gear selector.
- Do not leave the key fob in or near the vehicle (or in a location accessible to children). A child could operate power windows, other controls, or move the vehicle.

Single-Speed Transmission

The transmission must be in the PARK or NEUTRAL position before you can start the vehicle. Apply the brakes when selecting a transmission gear from Park.

**NOTE:** You must press the brake pedal before selecting a transmission gear.

**Normal Starting**

Turn the key to the START position while your vehicle is in PARK. When the ignition key is turned to the START and then released to the RUN position, a chime will sound and the “READY” indicator in the instrument cluster display will illuminate to indicate the 500e’s Electric Drive System has started. When the “READY” indicator is illuminated your 500e is ready to be driven.
NOTE:

- If the key is held in the START position for more than 10 seconds “READY” mode will not be achieved. Return the key to OFF position, and then back to the START position and hold for less than 10 seconds to achieve “READY”.

- If the “READY” indicator fails to illuminate after you have followed the normal starting procedure contact your authorized dealer.

SINGLE-SPEED TRANSMISSION

Your 500e uses a Single-Speed Transmission to direct the output from the electric motor. The single-speed transmission is operated using push-buttons instead of a traditional gear selector.

The push-buttons are located on the lower instrument panel.

---

CAUTION!

Damage to the transmission may occur if the following precautions are not observed:

- Place the transmission into PARK only after the vehicle has come to a complete stop.
- Place the transmission into or out of REVERSE only after the vehicle has come to a complete stop.
- Before placing the transmission into any range make sure your foot is firmly pressing the brake pedal.
NOTE:
• You must press and hold the brake pedal while shifting in or out of PARK.
• If all push-button LEDs are on when the key is ON, see your authorized dealer.

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Only place the transmission into gear when your foot is firmly pressing the brake pedal.</td>
</tr>
<tr>
<td>• Unintended movement of a vehicle could injure those in or near the vehicle. As with all vehicles, you should never exit a vehicle while the vehicle is in “READY” mode. Before exiting a vehicle, always apply the parking brake, shift the transmission into PARK, and remove the ignition key. Once the key is removed, the transmission is locked in PARK, securing the vehicle against unwanted movement.</td>
</tr>
<tr>
<td>• When leaving the vehicle, always remove the ignition key and lock your vehicle.</td>
</tr>
<tr>
<td>• Never leave children alone in a vehicle, or with access to an unlocked vehicle. Allowing children</td>

</tr>
</tbody>
</table>

**Key Ignition Park Interlock**

This vehicle is equipped with a Key Ignition Park Interlock which requires the transmission to be in PARK before the ignition can be turned to the OFF position. The key can only be removed from the ignition when the ignition is in the OFF position, and once removed, the transmission is locked in PARK.
Gear Ranges
Push the desired push button to shift into gear.

NOTE:
- The brake pedal must be depressed to select a transmission gear.
- After selecting any gear, wait a moment to allow the selected gear to engage before accelerating.

PARK (P)
The PARK selection supplements the parking brake by locking the transmission. The vehicle can be started in this range. Never attempt to use PARK while the vehicle is in motion. Apply the parking brake when leaving the vehicle in PARK.

When parking on a level surface, you may place the transmission into PARK first, and then apply the parking brake.

When parking on a hill, apply the parking brake before placing the transmission into PARK. As an added precaution, turn the front wheels toward the curb on a downhill grade and away from the curb on an uphill grade.

NOTE: Refer to the transmission range position displayed in the instrument cluster and verify that it indicates the PARK position.

WARNING!
- Never use the PARK position as a substitute for the parking brake. Always apply the parking brake fully when parked to guard against vehicle movement and possible injury or damage.
- Your vehicle could move and injure you and others if it is not in PARK. Make sure the transmission is in PARK before leaving the vehicle.
- It is dangerous to shift out of PARK or NEUTRAL if your foot is not firmly pressing the brake pedal. The vehicle could accelerate quickly forward or in reverse. You could lose control of the vehicle and hit someone or something. Only shift the transmission into gear when your foot is firmly pressing the brake pedal.
- Unintended movement of a vehicle could injure those in or near the vehicle. As with all vehicles, you should never exit a vehicle while the vehicle is in “ready mode”. Before exiting a vehicle,
always apply the parking brake, shift the trans-
mission into PARK, and remove the ignition key.
Once the key is removed, the transmission is
locked in PARK, securing the vehicle against
unwanted movement.

- When leaving the vehicle, always remove the
ignition key and lock your vehicle.
- Never leave children alone in a vehicle, or with
access to an unlocked vehicle. Allowing children
to be in a vehicle unattended is dangerous for a
number of reasons. A child or others could be
seriously or fatally injured. Children should be
warned not to touch the parking brake, brake
pedal or the transmission range buttons.
- Do not leave the ignition key in or near the
vehicle (or in a location accessible to children). A
child could operate power windows, other con-
trols, or move the vehicle.

**WARNING! (Continued)**

**NEUTRAL (N)**
The vehicle may be started in this gear. Apply the
parking brake and place the transmission into PARK if
you must leave the vehicle.

**WARNING!**

Do not coast in NEUTRAL and never turn off the
ignition to coast down a hill. These are unsafe
practices that limit your response to changing traf-
fic or road conditions. You might lose control of the
vehicle and have a collision.

**CAUTION!**

Towing the vehicle, coasting, or driving for any
other reason with the transmission in NEUTRAL
can cause severe transmission damage. Refer to
“Recreational Towing” in “Starting And Operating”
and “Towing A Disabled Vehicle” in “What To Do
In Emergencies” for further information.

**REVERSE (R)**
This gear is for moving the vehicle backward. Shift into
REVERSE only after the vehicle has come to a complete
stop.
DRIVE (D)
Use this gear for all city and highway driving.

Auto Park
The Auto Park feature automatically places the transmission into PARK if there is any indication that the driver may leave the vehicle while the transmission is in D (DRIVE), N (NEUTRAL) or R (REVERSE).

Auto Park is enabled under the following conditions:
- Key On (12 Volt ON and High Voltage OFF) or READY mode (12 Volt ON and High Voltage ON).
- Vehicle speed is below 2 mph (3 km/h).

NOTE:
- Auto Park is enabled (only once) at the beginning of each key cycle and is re-enabled each time the vehicle speed exceeds 8 mph (13 km/h).
- Auto Park is disabled above 2 mph (3 km/h) and transmission range will be maintained.

The instrument cluster will display an Auto Shift To Park message and chime once when Auto Park is activated.

Mode Of Operation With Key ON:
Auto Park will be engaged when the transmission is in DRIVE, NEUTRAL or REVERSE and the following conditions are detected:
- Seat Belt is unlatched
- Brake pedal is released
- Driver’s door is ajar
- Vehicle speed is less than 2 mph (3 km/h)

Mode Of Operation With Key OFF:
Auto Park will be engaged when the transmission is in DRIVE, NEUTRAL or REVERSE and the vehicle speed is less than 2 mph (3 km/h).

DRIVING ON SLIPPERY SURFACES

Acceleration
Rapid acceleration on snow covered, wet, or other slippery surfaces may cause the driving wheels to pull erratically to the right or left. This phenomenon occurs when there is a difference in the surface traction under the front (driving) wheels.
**WARNING!**

Rapid acceleration on slippery surfaces is dangerous. Unequal traction can cause sudden pulling of the front wheels. You could lose control of the vehicle and possibly have a collision. Accelerate slowly and carefully whenever there is likely to be poor traction (ice, snow, wet, mud, loose sand, etc.).

**Traction**

When driving on wet or slushy roads, it is possible for a wedge of water to build up between the tire and road surface. This is known as hydroplaning, and may cause partial or complete loss of vehicle control and stopping ability. To reduce this possibility, the following precautions should be observed:

- Slow down during rainstorms or when the roads are slushy.
- Slow down if the road has standing water or puddles.
- Replace the tires when tread wear indicators first become visible.
- Keep tires properly inflated.

- Maintain sufficient distance between your vehicle and the vehicle in front of you to avoid a collision in a sudden stop.

**DRIVING THROUGH WATER**

Driving through water more than a few inches/centimeters deep will require extra caution to ensure safety and prevent damage to your vehicle.

**Flowing/Rising Water**

Do not drive on or across a road or path where water is flowing and/or rising (as in storm run-off). Flowing water can wear away the road or path’s surface and cause your vehicle to sink into deeper water. Furthermore, flowing and/or rising water can carry your vehicle away swiftly. Failure to follow this warning may result in injuries that are serious or fatal to you, your passengers, and others around you.
Shallow Standing Water

Although your vehicle is capable of driving through shallow standing water, consider the following Caution and Warning before doing so.

<table>
<thead>
<tr>
<th>CAUTION!</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Always check the depth of the standing water before driving through it. Never drive through standing water that is deeper than the bottom of the tire rims mounted on the vehicle.</td>
</tr>
<tr>
<td>• Determine the condition of the road or the path that is under water and if there are any obstacles in the way before driving through the standing water.</td>
</tr>
<tr>
<td>• Do not exceed 5 mph (8 km/h) when driving through standing water. This will minimize wave effects.</td>
</tr>
<tr>
<td>• Driving through standing water may cause damage to your vehicle's drivetrain components. Always inspect your vehicle's fluids (i.e., transmission, coolant, etc.) for signs of contamination (i.e., fluid that is milky or foamy in appearance) after driving through standing water. Do not continue to operate the vehicle if any fluid appears contaminated, as this may result in further damage. Such damage is not covered by the New Vehicle Limited Warranty.</td>
</tr>
<tr>
<td>• Driving through standing water limits your vehicle's traction capabilities. Do not exceed 5 mph (8 km/h) when driving through standing water.</td>
</tr>
<tr>
<td>• Driving through standing water limits your vehicle's braking capabilities, which increases stopping distances. Therefore, after driving through standing water, drive slowly and lightly press on the brake pedal several times to dry the brakes.</td>
</tr>
<tr>
<td>• Failure to follow these warnings may result in injuries that are serious or fatal to you, your passengers, and others around you.</td>
</tr>
</tbody>
</table>

(Continued)
POWER STEERING

The electric power steering system will give you good vehicle response and increased ease of maneuverability in tight spaces. The system will vary its assist to provide light efforts while parking and good feel while driving. If the electric steering system experiences a fault that prevents it from providing assist, you will still have the ability to steer the vehicle manually.

WARNING!

Continued operation with reduced or no power steering assist could pose a safety risk to yourself and others. Service should be obtained as soon as possible.

If the Steering icon is flashing, it indicates that the vehicle needs to be taken to an authorized dealer for service. It is likely the vehicle has lost power steering assistance.

If the Steering icon is displayed and the “SERVICE POWER STEERING - ASSIST OFF” messages are displayed on the instrument cluster screen, the vehicle needs to be taken to an authorized dealer for service. Refer to “Instrument Cluster Display” in “Understanding Your Instrument Panel” for further information.

NOTE:

• Even if the power steering assistance is no longer operational, it is still possible to steer the vehicle. Under these conditions there will be a substantial increase in steering effort, especially at low speeds and during parking maneuvers.
• If the condition persists, see your authorized dealer for service.

PARKING BRAKE

Before leaving the vehicle, make sure that the parking brake is fully applied.
The parking brake lever is located in the center console. To apply the parking brake, pull the lever up as firmly as possible. To release the parking brake, pull the lever up slightly, push the center button, then lower the lever completely.

When the parking brake is applied with the ignition switch in the MAR (ACC/ON/RUN) position, the Brake Warning Light in the instrument cluster will illuminate.

When parking on a hill, it is important to turn the front wheels toward the curb on a downhill grade and away from the curb on an uphill grade. The parking brake should always be applied whenever the driver is not in the vehicle.

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Never leave children alone in a vehicle, or with access to an unlocked vehicle.</td>
</tr>
<tr>
<td>• Allowing children to be in a vehicle unattended is dangerous for a number of reasons. A child or others could be seriously or fatally injured. Children should be warned not to touch the parking brake, brake pedal or the transmission push buttons.</td>
</tr>
<tr>
<td>• Do not leave the key fob in or near the vehicle (or in a location accessible to children). A child could operate power windows, other controls, or move the vehicle.</td>
</tr>
<tr>
<td>• Be sure the parking brake is fully disengaged before driving; failure to do so can lead to brake failure and a collision.</td>
</tr>
<tr>
<td>• Always fully apply the parking brake when leaving your vehicle, or it may roll and cause damage or injury.</td>
</tr>
</tbody>
</table>
CAUTION!

If the Brake Warning Light remains on with the parking brake released, a brake system malfunction is indicated. Have the brake system serviced by an authorized dealer immediately.

BRAKE SYSTEM

In the event regenerative braking or power assist is lost for any reason the brakes will still function. The effort required to brake the vehicle will be significantly more than that required with the power system operating.

If either the front or rear hydraulic system loses normal capability, the remaining system will still function with some loss of braking effectiveness. This will be evident by increased pedal travel during application, greater pedal force required to slow or stop, and activation of the Brake Warning Light and the ABS Warning Light during brake use.

ELECTRONIC BRAKE CONTROL SYSTEM

Your vehicle is equipped with an advanced electronic brake control system that includes the Anti-Lock Brake System (ABS), Brake Assist System (BAS), Traction Control System (TCS), and Electronic Stability Control (ESC). All systems work together to enhance vehicle stability and control in various driving conditions and are commonly referred to as ESC.

Four-Wheel Anti-Lock Brake System (ABS)

The Four-Wheel ABS is designed to aid the driver in maintaining vehicle control under adverse braking conditions. The system operates with a separate computer to modulate hydraulic pressure, to prevent wheel lock-up and to help avoid skidding on slippery surfaces.

The system’s pump motor runs during an ABS stop to provide regulated hydraulic pressure. The pump motor makes a low humming noise during operation, which is normal.

The ABS includes an amber ABS Warning Light. When the light is illuminated, the ABS is not functioning. The system reverts to standard non-anti-lock brakes. Turning the ignition Off and On again may reset the ABS if the fault detected was only momentary.
WARNING!

- Pumping the Anti-Lock Brakes will diminish their effectiveness and may lead to a collision. Pumping makes the stopping distance longer. Just press firmly on your brake pedal when you need to slow down or stop.
- The Anti-Lock Brake System (ABS) cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase braking or steering efficiency beyond that afforded by the condition of the vehicle brakes and tires or the traction afforded.
- The ABS cannot prevent collisions, including those resulting from excessive speed in turns, following another vehicle too closely, or hydroplaning.
- The capabilities of an ABS-equipped vehicle must never be exploited in a reckless or dangerous manner, which could jeopardize the user's safety or the safety of others.

When you are in a severe braking condition involving the use of the ABS, you will experience some pedal drop as the vehicle comes to a stop. This is the result of the system reverting to the base brake system.

Engagement of the ABS may be accompanied by a pulsing sensation. You may also hear a clicking noise. These occurrences are normal and indicate that the system is functioning properly.

**Brake Assist System (BAS)**

The BAS is designed to optimize the vehicle’s braking capability during emergency braking maneuvers. The system detects an emergency braking situation by sensing the rate and amount of brake application and then applies optimum pressure to the brakes. This can help reduce braking distances. The BAS complements the Anti-Lock Brake System (ABS). Applying the brakes very quickly results in the best BAS assistance. To receive the benefit of the system, you must apply continuous braking pressure during the stopping sequence (do not “pump” the brakes). Do not reduce brake pedal pressure unless braking is no longer desired. Once the brake pedal is released, the BAS is deactivated.
• The Brake Assist System (BAS) cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase the traction afforded by prevailing road conditions.
• The BAS cannot prevent collisions, including those resulting from excessive speed in turns, driving on very slippery surfaces, or hydroplaning.
• The capabilities of a BAS-equipped vehicle must never be exploited in a reckless or dangerous manner which could jeopardize the user’s safety or the safety of others.

Traction Control System (TCS)
This system monitors the amount of wheel spin of each of the driven wheels. If wheel spin is detected, brake pressure is applied to the slipping wheel(s) and vehicle power is reduced to provide enhanced acceleration and stability. A feature of the TCS system, Brake Limited Differential (BLD), functions similar to a limited slip differential and controls the wheel spin across a driven axle. If one wheel on a driven axle is spinning faster than the other, the system will apply the brake of the spinning wheel. This will allow more torque to be applied to the wheel that is not spinning. This feature remains active even if TCS and ESC are in the Partial Off mode. Refer to “Electronic Stability Control (ESC)” in this section for further information.

Electronic Stability Control (ESC)
This system enhances directional control and stability of the vehicle under various driving conditions. ESC corrects for oversteering or understeering of the vehicle by applying the brake of the appropriate wheel to assist in counteracting the oversteering or understeering condition. Vehicle power may also be reduced to help the vehicle maintain the desired path. ESC uses sensors in the vehicle to determine the vehicle path intended by the driver and compares it to the actual path of the vehicle. When the actual path does not match the intended path, ESC applies the brake of the appropriate wheel to assist in counteracting the oversteer or understeer condition.

• Oversteer - when the vehicle is turning more than appropriate for the steering wheel position.
• Understeer - when the vehicle is turning less than appropriate for the steering wheel position.
NOTE: The ESC Off switch is located on the instrument panel.

**WARNING!**

- The Electronic Stability Control (ESC) cannot prevent the natural laws of physics from acting on the vehicle, nor can it increase the traction afforded by prevailing road conditions. ESC cannot prevent all accidents, including those resulting from excessive speed in turns, driving on very slippery surfaces, or hydroplaning. ESC also cannot prevent collisions resulting from loss of vehicle control due to inappropriate driver input for the conditions. Only a safe, attentive, and skillful driver can prevent accidents. The capabilities of an ESC equipped vehicle must never be exploited in a reckless or dangerous manner which could jeopardize the user’s safety or the safety of others.
- Vehicle modifications, or failure to properly maintain your vehicle, may change the handling characteristics of your vehicle, and may negatively affect the performance of the ESC system. Changes to the steering system, suspension, braking system, tire type and size or wheel size may adversely affect ESC performance. Improperly inflated and unevenly worn tires may also degrade ESC performance. Any vehicle modification or poor vehicle maintenance that reduces the effectiveness of the ESC system can increase the risk of loss of vehicle control, vehicle rollover, personal injury and death.

**ESC Operating Modes**

The ESC system has two available operating modes.

**Full On**

This is the normal operating mode for ESC. Whenever the vehicle is started, the ESC system will be in On mode. This mode should be used for most driving situations. ESC should only be turned to Partial Off for specific reasons as noted below.
Partial Off

This mode is entered by momentarily pushing the ESC Off switch. This mode is intended to be used if the vehicle is in deep snow, sand or gravel conditions and more wheel spin than ESC would normally allow is required to gain traction.

To turn ESC on again, momentarily pushing the switch again. This will restore the normal ESC On mode of operation.

NOTE: To improve the vehicle’s traction when driving with snow chains, or starting off in deep snow, sand or gravel, it may be desirable to switch to the Partial Off mode by pushing the switch. Once the situation requiring ESC to be switched to the Partial Off mode is overcome, turn ESC back on by momentarily pushing the switch. This may be done while the vehicle is in motion.

WARNING!

- When in “Partial Off” mode, the TCS functionality of ESC, (except for the limited slip feature described in the TCS section), has been disabled and the “ESC Off Indicator Light” will be illuminated. When in “Partial Off” mode, the engine power reduction feature of TCS is disabled, and the enhanced vehicle stability offered by the ESC system is reduced.

ESC Activation/Malfunction Indicator Light And ESC OFF Indicator Light

The ESC Activation/Malfunction Indicator Light in the instrument cluster will come on when the ignition switch is turned to the MAR (ACC/ON/RUN) position for four seconds. If the ESC Activation/Malfunction Indicator Light comes on continuously with the vehicle operating running, a malfunction has been detected in the ESC system. If this light remains on after several ignition cycles, and the vehicle has been driven several miles
(kilometers) at speeds greater than 30 mph (48 km/h), see your authorized dealer as soon as possible to have the problem diagnosed and corrected.

The ESC Activation/Malfunction Indicator Light (located in the instrument cluster) starts to flash as soon as the tires lose traction and the ESC system becomes active. The ESC Activation/Malfunction Indicator Light also flashes when TCS is active. If the ESC Activation/Malfunction Indicator Light begins to flash during acceleration, ease up on the accelerator and apply as little throttle as possible. Be sure to adapt your speed and driving to the prevailing road conditions.

NOTE:

- The ESC Activation/Malfunction Indicator Light and the ESC OFF Indicator Light come on momentarily each time the ignition switch is turned ON.
- Each time the ignition is turned ON, the ESC system will be ON even if it was turned off previously.

The ESC OFF Indicator Light indicates the Electronic Stability Control (ESC) is partially off.

**Regenerative Braking System (RBS)**

Your 500e has a Regenerative Braking System (RBS). The RBS reduces the high voltage battery consumption of the vehicle, particularly in stop-and-go city traffic. The electric motors which propel the vehicle forward can operate as generators when braking. The RBS recharges the high voltage battery under certain braking conditions by recapturing energy that would otherwise be lost while braking. The electric power that is generated goes back into the high voltage battery for later use, for example when acceleration is desired.

The RBS uses conventional hydraulic friction brakes, regenerative braking, or a combination to slow the vehicle. If the system detects slippery conditions while braking, ONLY friction is used to slow the vehicle. The RBS can result in extended life of the hydraulic service brakes; however, all inspection, scheduled maintenance, and service intervals for the vehicle service brakes must be followed.
TIRE SAFETY INFORMATION

Tire Markings

1 — U.S. DOT Safety Standards Code (TIN)
2 — Size Designation
3 — Service Description
4 — Maximum Load
5 — Maximum Pressure
6 — Treadwear, Traction and Temperature Grades

NOTE:

- P (Passenger) — Metric tire sizing is based on U.S. design standards. P-Metric tires have the letter “P” molded into the sidewall preceding the size designation. Example: P215/65R15 95H.

- European — Metric tire sizing is based on European design standards. Tires designed to this standard have the tire size molded into the sidewall beginning with the section width. The letter “P” is absent from this tire size designation. Example: 215/65R15 96H.

- LT (Light Truck) — Metric tire sizing is based on U.S. design standards. The size designation for LT-Metric tires is the same as for P-Metric tires except for the letters “LT” that are molded into the sidewall preceding the size designation. Example: LT235/85R16.

- Temporary spare tires are designed for temporary emergency use only. Temporary high pressure compact spare tires have the letter “T” or “S” molded into the sidewall preceding the size designation. Example: T145/80D18 103M.

- High flotation tire sizing is based on U.S. design standards and it begins with the tire diameter molded into the sidewall. Example: 31x10.5 R15 LT.
### Tire Sizing Chart

**Example Size Designation:** P215/65R15XL 95H, 215/65R15 96H, LT235/85R16C, T145/80D18 103M, 31x10.5 R15 LT

- **P** = Passenger car tire size based on U.S. design standards, or
- "....blank...." = Passenger car tire based on European design standards, or
- **LT** = Light truck tire based on U.S. design standards, or
- **T or S** = Temporary spare tire or
- **31** = Overall diameter in inches (in)
- **215, 235, 145** = Section width in millimeters (mm)
- **65, 85, 80** = Aspect ratio in percent (%)
- "R" means radial construction, or
- "D" means diagonal or bias construction
- **10.5** = Section width in inches (in)
- **15, 16, 18** = Rim diameter in inches (in)
EXAMPLE:

Service Description:

95 = Load Index
– A numerical code associated with the maximum load a tire can carry

H = Speed Symbol
– A symbol indicating the range of speeds at which a tire can carry a load corresponding to its load index under certain operating conditions
– The maximum speed corresponding to the speed symbol should only be achieved under specified operating conditions (i.e., tire pressure, vehicle loading, road conditions, and posted speed limits)

Load Identification:
Absence of the following load identification symbols on the sidewall of the tire indicates a Standard Load (SL) tire:
• XL = Extra load (or reinforced) tire, or
• LL = Light load tire or
• C, D, E, F, G = Load range associated with the maximum load a tire can carry at a specified pressure

Maximum Load – Maximum load indicates the maximum load this tire is designed to carry

Maximum Pressure – Maximum pressure indicates the maximum permissible cold tire inflation pressure for this tire
### Tire Identification Number (TIN)

The TIN may be found on one or both sides of the tire; however, the date code may only be on one side. Tires with white sidewalls will have the full TIN, including the date code, located on the white sidewall side of the tire. Look for the TIN on the outboard side of black sidewall tires as mounted on the vehicle. If the TIN is not found on the outboard side, then you will find it on the inboard side of the tire.

<table>
<thead>
<tr>
<th>EXAMPLE:</th>
</tr>
</thead>
<tbody>
<tr>
<td>DOT MA L9 ABCD 0301</td>
</tr>
</tbody>
</table>

- **DOT** = Department of Transportation
- **MA** = Code representing the tire manufacturing location (two digits)
- **L9** = Code representing the tire size (two digits)
- **ABCD** = Code used by the tire manufacturer (one to four digits)
- **03** = Number representing the week in which the tire was manufactured (two digits)
  - 03 means the 3rd week
- **01** = Number representing the year in which the tire was manufactured (two digits)
  - 01 means the year 2001

Prior to July 2000, tire manufacturers were only required to have one number to represent the year in which the tire was manufactured. Example: 031 could represent the 3rd week of 1981 or 1991.
## Tire Terminology And Definitions

Tire Loading And Tire Pressure

Tire And Loading Information Placard Location

NOTE: The proper cold tire inflation pressure is listed on the driver’s side B-Pillar or the rear edge of the driver’s side door.

Check the inflation pressure of each tire, including the spare tire (if equipped), at least monthly and inflate to the recommended pressure for your vehicle.

WARNING!

• Overloading of your tires is dangerous. Overloading can cause tire failure, affect vehicle handling, and increase your stopping distance. Use tires of the recommended load capacity for your vehicle. Never overload them.
• Improperly inflated tires are dangerous and can cause collisions. Under-inflation increases tire flexing and can result in over-heating and tire failure. Over-inflation reduces a tire’s ability to cushion shock. Objects on the road and chuck holes can cause damage that results in tire failure. Unequal tire pressures can cause steering problems. You could lose control of your vehicle. Over-inflated or under-inflated tires can affect vehicle handling and can fail suddenly, resulting in loss of vehicle control. Always drive with each tire inflated to the recommended cold tire inflation pressure.

Tire And Loading Information Placard

This placard tells you important information about:
1. Number of people that can be carried in the vehicle.
2. Total weight your vehicle can carry.
3. Tire size designed for your vehicle.
4. Cold tire inflation pressures for the front, rear, and spare tires.
Loading

The vehicle maximum load on the tire must not exceed the load carrying capacity of the tire on your vehicle. You will not exceed the tire’s load carrying capacity if you adhere to the loading conditions, tire size, and cold tire inflation pressures specified on the Tire and Loading Information placard in “Vehicle Loading” in “Starting And Operating”, or the Tire Information Supplement, located in your Owner’s Information kit.

NOTE: Under a maximum loaded vehicle condition, gross axle weight ratings (GAWRs) for the front and rear axles must not be exceeded. Refer to “Vehicle Loading” in “Starting And Operating”, or the Tire Information Supplement located in your Owner’s Information kit, for further information on GAWRs, vehicle loading, and trailer towing.

To determine the maximum loading conditions of your vehicle, locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs” on the Tire and Loading Information placard.

The combined weight of occupants, cargo/luggage and trailer tongue weight (if applicable) should never exceed the weight referenced here.

Steps For Determining Correct Load Limit—

(1) Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s placard.

(2) Determine the combined weight of the driver and passengers that will be riding in your vehicle.

(3) Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

(4) The resulting figure equals the available amount of cargo and luggage load capacity. For example, if “XXX” amount equals 1400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. 
(1400-750 (5x150) = 650 lbs.)
(5) Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

(6) If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

**Metric Example For Load Limit**

For example, if “XXX” amount equals 635 kg, and there will be five 68 kg passengers in your vehicle, the amount of available cargo and luggage load capacity is 295 kg (635-340 (5x68) = 295 kg) as shown in step 4.

**NOTE:**

- If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. The following table shows examples on how to calculate total load, cargo/luggage, and towing capacities of your vehicle with varying seating configurations and number and size of occupants. This table is for illustration purposes only and may not be accurate for the seating and load carry capacity of your vehicle.
- For the following example, the combined weight of occupants and cargo should never exceed 865 lbs (392 kg).
WARNING!
Overloading of your tires is dangerous. Overloading can cause tire failure, affect vehicle handling, and increase your stopping distance. Use tires of the recommended load capacity for your vehicle. Never overload them.

(Continued)
TIRES — GENERAL INFORMATION

Tire Pressure

Proper tire inflation pressure is essential to the safe and satisfactory operation of your vehicle. Four primary areas are affected by improper tire pressure:

- Safety and Vehicle Stability
- Energy Consumption
- Tread Wear
- Ride Comfort

Safety

WARNING!

- Improperly inflated tires are dangerous and can cause collisions.
- Underinflation increases tire flexing and can result in overheating and tire failure.
- Overinflation reduces a tire’s ability to cushion shock. Objects on the road and chuckholes can cause damage that result in tire failure.

WARNING! (Continued)

- Overinflated or underinflated tires can affect vehicle handling and can fail suddenly, resulting in loss of vehicle control.
- Unequal tire pressures can cause steering problems. You could lose control of your vehicle.
- Unequal tire pressures from one side of the vehicle to the other can cause the vehicle to drift to the right or left.
- Always drive with each tire inflated to the recommended cold tire inflation pressure.

Both under-inflation and over-inflation affect the stability of the vehicle and can produce a feeling of sluggish response or over responsiveness in the steering.

NOTE:

- Unequal tire pressures from side to side may cause erratic and unpredictable steering response.
- Unequal tire pressure from side to side may cause the vehicle to drift left or right.

Energy Consumption

Underinflated tires will increase tire rolling resistance resulting in higher battery charge consumption.
Tread Wear

Improper cold tire inflation pressures can cause abnormal wear patterns and reduced tread life, resulting in the need for earlier tire replacement.

Ride Comfort And Vehicle Stability

Proper tire inflation contributes to a comfortable ride. Over-inflation produces a jarring and uncomfortable ride.

Tire Inflation Pressures

The proper cold tire inflation pressure is listed on the driver’s side B-Pillar or rear edge of the driver’s side door.

At least once a month:

- Check and adjust tire pressure with a good quality pocket-type pressure gauge. Do not make a visual judgement when determining proper inflation. Tires may look properly inflated even when they are under-inflated.
- Inspect tires for signs of tire wear or visible damage.

<table>
<thead>
<tr>
<th>CAUTION!</th>
</tr>
</thead>
<tbody>
<tr>
<td>After inspecting or adjusting the tire pressure, always reinstall the valve stem cap. This will prevent moisture and dirt from entering the valve stem, which could damage the valve stem.</td>
</tr>
</tbody>
</table>

Inflation pressures specified on the placard are always “cold tire inflation pressure”. Cold tire inflation pressure is defined as the tire pressure after the vehicle has not been driven for at least three hours, or driven less than 1 mile (1.6 km) after sitting for a minimum of three hours. The cold tire inflation pressure must not exceed the maximum inflation pressure molded into the tire sidewall.

Check tire pressures more often if subject to a wide range of outdoor temperatures, as tire pressures vary with temperature changes.

Tire pressures change by approximately 1 psi (7 kPa) per 12°F (7°C) of air temperature change. Keep this in mind when checking tire pressure inside a garage, especially in the Winter.

Example: If garage temperature = 68°F (20°C) and the outside temperature = 32°F (0°C) then the cold tire
inflation pressure should be increased by 3 psi (21 kPa), which equals 1 psi (7 kPa) for every 12°F (7°C) for this outside temperature condition.

Tire pressure may increase from 2 to 6 psi (13 to 40 kPa) during operation. DO NOT reduce this normal pressure build up or your tire pressure will be too low.

**Tire Pressures For High Speed Operation**

The manufacturer advocates driving at safe speeds and within posted speed limits. Where speed limits or conditions are such that the vehicle can be driven at high speeds, maintaining correct tire inflation pressure is very important. Increased tire pressure and reduced vehicle loading may be required for high-speed vehicle operation. Refer to your authorized tire dealer or original equipment vehicle dealer for recommended safe operating speeds, loading and cold tire inflation pressures.

**WARNING!**

High speed driving with your vehicle under maximum load is dangerous. The added strain on your tires could cause them to fail. You could have a serious collision. Do not drive a vehicle loaded to the maximum capacity at continuous speeds above 75 mph (120 km/h).

**Radial Ply Tires**

Combining radial ply tires with other types of tires on your vehicle will cause your vehicle to handle poorly. The instability could cause a collision. Always use radial ply tires in sets of four. Never combine them with other types of tires.

**Tire Repair**

If your tire becomes damaged, it may be repaired if it meets the following criteria:

- The tire has not been driven on when flat.
- The damage is only on the tread section of your tire (sidewall damage is not repairable).
- The puncture is no greater than a ¼ of an inch (6 mm).
Consult an authorized tire dealer for tire repairs and additional information.

Damaged Run Flat tires, or Run Flat tires that have experienced a loss of pressure should be replaced immediately with another Run Flat tire of identical size and service description (Load Index and Speed Symbol).

**Tire Types**

**All Season Tires — If Equipped**

All season tires provide traction for all seasons (Spring, Summer, Fall and Winter). Traction levels may vary between different all season tires. All season tires can be identified by the M+S, M&S, M/S or MS designation on the tire sidewall. Use all season tires only in sets of four; failure to do so may adversely affect the safety and handling of your vehicle.

**Summer Or Three Season Tires — If Equipped**

Summer tires provide traction in both wet and dry conditions, and are not intended to be driven in snow or on ice. If your vehicle is equipped with Summer tires, be aware these tires are not designed for Winter or cold driving conditions. Install Winter tires on your vehicle when ambient temperatures are less than 40°F (5°C) or if roads are covered with ice or snow. For more information, contact an authorized dealer.

Summer tires do not contain the all season designation or mountain/snowflake symbol on the tire sidewall. Use Summer tires only in sets of four; failure to do so may adversely affect the safety and handling of your vehicle.

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use Summer tires in snow/ice conditions. You could lose vehicle control, resulting in severe injury or death. Driving too fast for conditions also creates the possibility of loss of vehicle control.</td>
</tr>
</tbody>
</table>
Snow Tires

Some areas of the country require the use of snow tires during the Winter. Snow tires can be identified by a “mountain/snowflake” symbol on the tire sidewall.

If you need snow tires, select tires equivalent in size and type to the original equipment tires. Use snow tires only in sets of four; failure to do so may adversely affect the safety and handling of your vehicle.

Snow tires generally have lower speed ratings than what was originally equipped with your vehicle and should not be operated at sustained speeds over 75 mph (120 km/h). For speeds above 75 mph (120 km/h), refer to original equipment or an authorized tire dealer for recommended safe operating speeds, loading and cold tire inflation pressures.

While studded tires improve performance on ice, skid and traction capability on wet or dry surfaces may be poorer than that of non-studded tires. Some states prohibit studded tires; therefore, local laws should be checked before using these tire types.

Run Flat Tires — If Equipped

Run Flat tires allow you the capability to drive 50 miles (80 km) at 50 mph (80 km/h) after a rapid loss of inflation pressure. This rapid loss of inflation is referred to as the Run Flat mode. A Run Flat mode occurs when the tire inflation pressure is of/or below 14 psi (96 kPa). Once a Run Flat tire reaches the Run Flat mode, it has limited driving capabilities and needs to be replaced immediately. A Run Flat tire is not repairable.

It is not recommended to drive a vehicle loaded at full capacity, or to tow a trailer while a tire is in the Run Flat mode.

See the tire pressure monitoring section for more information.

Spare Tires — If Equipped

NOTE: For vehicles equipped with Tire Service Kit instead of a spare tire, please refer to the “Tire Service Kit” section located in your Owner’s Information kit for further information.
CAUTION!

Because of the reduced ground clearance, do not take your vehicle through an automatic car wash with a compact or limited use temporary spare installed. Damage to the vehicle may result.

Spare Tire Matching Original Equipped Tire And Wheel — If Equipped

Your vehicle may be equipped with a spare tire and wheel equivalent in look and function to the original equipment tire and wheel found on the front or rear axle of your vehicle. This spare tire may be used in the tire rotation for your vehicle. If your vehicle has this option, refer to an authorized tire dealer for the recommended tire rotation pattern.

Compact Spare Tire — If Equipped

The compact spare is for temporary emergency use only. You can identify if your vehicle is equipped with a compact spare by looking at the spare tire description on the Tire and Loading Information Placard located on the driver’s side door opening or on the sidewall of the tire. Compact spare tire descriptions begin with the letter “T” or “S” preceding the size designation. Example: T145/80D18 103M.

T, S = Temporary Spare Tire

Since this tire has limited tread life, the original equipment tire should be repaired (or replaced) and reinstalled on your vehicle at the first opportunity.

Do not install a wheel cover or attempt to mount a conventional tire on the compact spare wheel, since the wheel is designed specifically for the compact spare tire. Do not install more than one compact spare tire and wheel on the vehicle at any given time.

WARNING!

Compact and Collapsible spares are for temporary emergency use only. With these spares, do not drive more than 50 mph (80 km/h). Temporary use spares have limited tread life. When the tread is worn to the tread wear indicators, the temporary use spare tire needs to be replaced. Be sure to follow the warnings, which apply to your spare. Failure to do so could result in spare tire failure and loss of vehicle control.
Full Size Spare — If Equipped

The full size spare is for temporary emergency use only. This tire may look like the originally equipped tire on the front or rear axle of your vehicle, but it is not. This spare tire may have limited tread life. When the tread is worn to the tread wear indicators, the temporary use full size spare tire needs to be replaced. Since it is not the same as your original equipment tire, replace (or repair) the original equipment tire and reinstall on the vehicle at the first opportunity.

Limited Use Spare — If Equipped

The limited use spare tire is for temporary emergency use only. This tire is identified by a label located on the limited use spare wheel. This label contains the driving limitations for this spare. This tire may look like the original equipped tire on the front or rear axle of your vehicle, but it is not. Installation of this limited use spare tire affects vehicle handling. Since it is not the same as your original equipment tire, replace (or repair) the original equipment tire and reinstall on the vehicle at the first opportunity.

**WARNING!**

Limited use spares are for emergency use only. Installation of this limited use spare tire affects vehicle handling. With this tire, do not drive more than the speed listed on the limit use spare wheel. Keep inflated to the cold tire inflation pressures listed on your Tire and Loading Information Placard located on the driver’s side B-Pillar or the rear edge of the driver’s side door. Replace (or repair) the original equipment tire at the first opportunity and reinstall it on your vehicle. Failure to do so could result in loss of vehicle control.

Tire Spinning

When stuck in mud, sand, snow, or ice conditions, do not spin your vehicle’s wheels above 30 mph (48 km/h) or for longer than 30 seconds continuously without stopping.

Refer to “Freeing A Stuck Vehicle” in “What To Do In Emergencies” for further information.
WARNING!

Fast spinning tires can be dangerous. Forces generated by excessive wheel speeds may cause tire damage or failure. A tire could explode and injure someone. Do not spin your vehicle’s wheels faster than 30 mph (48 km/h) for more than 30 seconds continuously when you are stuck, and do not let anyone near a spinning wheel, no matter what the speed.

Tread Wear Indicators

Tread wear indicators are in the original equipment tires to help you in determining when your tires should be replaced.

These indicators are molded into the bottom of the tread grooves. They will appear as bands when the tread depth becomes a 1/16 of an inch (1.6 mm). When the tread is worn to the tread wear indicators, the tire should be replaced. Refer to “Replacement Tires” in this section for further information.
Life Of Tire

The service life of a tire is dependent upon varying factors including, but not limited to:

- Driving style.
- Tire pressure – Improper cold tire inflation pressures can cause uneven wear patterns to develop across the tire tread. These abnormal wear patterns will reduce tread life, resulting in the need for earlier tire replacement.
- Distance driven.
- Performance tires, tires with a speed rating of V or higher, and Summer tires typically have a reduced tread life. Rotation of these tires per the vehicle maintenance schedule is highly recommended.

**WARNING!**

Tires and the spare tire should be replaced after six years, regardless of the remaining tread. Failure to follow this warning can result in sudden tire failure. You could lose control and have a collision resulting in serious injury or death.

Replacement Tires

The tires on your new vehicle provide a balance of many characteristics. They should be inspected regularly for wear and correct cold tire inflation pressures. The manufacturer strongly recommends that you use tires equivalent to the originals in size, quality and performance when replacement is needed. Refer to the paragraph on “Tread Wear Indicator” in this section. Refer to the Tire and Loading Information placard or the Vehicle Certification Label for the size designation of your tire. The Load Index and Speed Symbol for your tire will be found on the original equipment tire sidewall.

See the Tire Sizing Chart example found in the “Tire Safety Information” section of this manual for more information relating to the Load Index and Speed Symbol of a tire.
It is recommended to replace the two front tires or two rear tires as a pair. Replacing just one tire can seriously affect your vehicle’s handling. If you ever replace a wheel, make sure that the wheel’s specifications match those of the original wheels.

It is recommended you contact your authorized tire dealer or original equipment dealer with any questions you may have on tire specifications or capability. Failure to use equivalent replacement tires may adversely affect the safety, handling, and ride of your vehicle.

**WARNING!**

- Do not use a tire, wheel size or rating other than that specified for your vehicle. Some combinations of unapproved tires and wheels may change suspension dimensions and performance characteristics, resulting in changes to steering, handling, and braking of your vehicle. This can cause unpredictable handling and stress to steering and suspension components. You could lose control and have a collision resulting in serious injury or death. Use only the tire and wheel sizes with load ratings approved for your vehicle.

**WARNING! (Continued)**

- Never use a tire with a smaller load index or capacity, other than what was originally equipped on your vehicle. Using a tire with a smaller load index could result in tire overloading and failure. You could lose control and have a collision.
- Failure to equip your vehicle with tires having adequate speed capability can result in sudden tire failure and loss of vehicle control.

**CAUTION!**

Replacing original tires with tires of a different size may result in false speedometer and odometer readings.

**TIRE CHAINS (TRACTION DEVICES)**

Use of traction devices require sufficient tire-to-body clearance. Follow these recommendations to guard against damage.

- Traction device must be of proper size for the tire, as recommended by the traction device manufacturer
- Install on Front Tires
Due to limited clearance, a 185/55R15 tire with a Security Chain Company (SCC) Super Z6 low profile traction device or equivalent is recommended.

**WARNING!**

Using tires of different size and type (M+S, Snow) between front and rear axles can cause unpredictable handling. You could lose control and have a collision.

**CAUTION!**

To avoid damage to your vehicle or tires, observe the following precautions:

- Because of restricted chain clearance between tires and other suspension components, it is important that only chains in good condition are used. Broken chains can cause serious damage. Stop the vehicle immediately if noise occurs that could indicate chain breakage. Remove the damaged parts of the chain before further use.

- Install chains on the front wheels as tightly as possible and then retighten after driving about ½ mile (0.8 km).

- Do not exceed 30 mph (48 km/h).

- Drive cautiously and avoid severe turns and large bumps, especially with a loaded vehicle.

- Do not drive for prolonged period on dry pavement.

- Observe the tire chain manufacturer’s instructions on the method of installation, operating speed, and conditions for use. Always use the lower suggested operating speed of the chain manufacturer if different from the speed recommended by the manufacture.

- Do not use traction devices on a compact spare tire.
TIRE ROTATION RECOMMENDATIONS

The tires on the front and rear of your vehicle operate at different loads and perform different steering, driving, and braking functions. For these reasons, they wear at unequal rates.

These effects can be reduced by timely rotation of tires. The benefits of rotation are especially worthwhile with aggressive tread designs such as those on all season type tires. Rotation will increase tread life, help to maintain mud, snow and wet traction levels, and contribute to a smooth, quiet ride.

Refer to the “Maintenance Schedule” for the proper maintenance intervals. The reasons for any rapid or unusual wear should be corrected prior to rotation being performed.

The front and rear wheels are different sizes and cannot be used in place of each other. Rotate the wheels “side-to-side” as shown in the diagram.

DEPARTMENT OF TRANSPORTATION UNIFORM TIRE QUALITY GRADES

The following tire grading categories were established by the National Highway Traffic Safety Administration. The specific grade rating assigned by the tire’s manufacturer in each category is shown on the sidewall of the tires on your vehicle.

All passenger vehicle tires must conform to Federal safety requirements in addition to these grades.
Treadwear

The Treadwear grade is a comparative rating, based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices, and differences in road characteristics and climate.

Traction Grades

The Traction grades, from highest to lowest, are AA, A, B, and C. These grades represent the tire’s ability to stop on wet pavement, as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

WARNING!

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

Temperature Grades

The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat, when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance, which all passenger vehicle tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel, than the minimum required by law.
WARNING!

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, under-inflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.

TIRE PRESSURE MONITOR SYSTEM

The Tire Pressure Monitor System (TPMS) will warn the driver of a low tire pressure based on the vehicle recommended cold placard pressure.

The tire pressure will vary with temperature by about 1psi (7 kPa) for every 12°F (6.5°C). This means that when the outside temperature decreases, the tire pressure will decrease. Tire pressure should always be set based on cold inflation tire pressure. This is defined as the tire pressure after the vehicle has not been driven for at least three hours, or driven less than 1 mile (1.6 km) after a three hour period. The cold tire inflation pressure must not exceed the maximum inflation pressure molded into the tire sidewall. Refer to “Tires – General Information” in “Starting And Operating” for information on how to properly inflate the vehicle’s tires. The tire pressure will also increase as the vehicle is driven. This is normal and there should be no adjustment for this increased pressure.

The TPMS will warn the driver of a low tire pressure if the tire pressure falls below the low-pressure warning limit for any reason, including low temperature effects and natural pressure loss through the tire.

The TPMS will continue to warn the driver of low tire pressure as long as the condition exists, and will not turn off until the tire pressure is at or above the recommended cold placard pressure. Once the low tire pressure warning (Tire Pressure Monitoring Telltale Light) illuminates, you must increase the tire pressure to the recommended cold placard pressure in order for the “Tire Pressure Monitoring Telltale Light” to turn off. The system will automatically update and the “Tire Pressure Monitoring Telltale Light” will turn off once the system receives the updated tire pressures. The vehicle may need to be driven for up to 20 minutes above 15 mph (24 km/h) in order for the TPMS to receive this information.
For example, your vehicle may have a recommended cold (parked for more than three hours) placard pressure of 33 psi (227 kPa). If the ambient temperature is 68°F (20°C) and the measured tire pressure is 28 psi (193 kPa), a temperature drop to 20°F (-7°C) will decrease the tire pressure to approximately 24 psi (165 kPa). This tire pressure is low enough to turn ON the “Tire Pressure Monitoring Telltale Light.” Driving the vehicle may cause the tire pressure to rise to approximately 28 psi (193 kPa), but the “Tire Pressure Monitoring Telltale Light” will still be on. In this situation, the “Tire Pressure Monitoring Telltale Light” will turn off only after the tires are inflated to the vehicle’s recommended cold placard pressure value.

CAUTION!

- The TPMS has been optimized for the original equipment tires and wheels. TPMS pressures and warnings have been established for the tire size equipped on your vehicle. Undesirable system operation or sensor damage may result when using replacement equipment that is not of the same size, type, and/or style. The TPM sensor is not designed for use on aftermarket wheels and may contribute to a poor overall system performance or sensor damage. Customers are encouraged to use OEM wheels to assure proper TPM feature operation.
- Using aftermarket tire sealants may cause the Tire Pressure Monitoring System (TPMS) sensor to become inoperable. After using an aftermarket tire sealant it is recommended that you take your vehicle to an authorized dealership to have your sensor function checked.
- After inspecting or adjusting the tire pressure, always reinstall the valve stem cap. This will prevent moisture and dirt from entering the valve stem, which could damage the Tire Pressure Monitoring Sensor.

(Continued)
NOTE:

• The TPMS is not intended to replace normal tire care and maintenance, or to provide warning of a tire failure or condition.

• The TPMS should not be used as a tire pressure gauge while adjusting your tire pressure.

• Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure.

• Under-inflation also reduces the high voltage battery range and tire tread life, and may affect the vehicle’s handling and stopping ability.

• It is particularly important for you to check the tire pressure in all of the tires on your vehicle monthly and to maintain the proper pressure.

• The TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure using an accurate tire pressure gauge, even if under-inflation has not reached the level to trigger illumination of the “Tire Pressure Monitoring Telltale Light”.

• Seasonal temperature changes will affect tire pressure, and the TPMS will monitor the actual tire pressure in the tire.

TPM System

The Tire Pressure Monitor System (TPMS) uses wireless technology with wheel rim mounted electronic sensors to monitor tire pressure levels. Sensors, mounted to each wheel as part of the valve stem, transmit tire pressure readings to the receiver module.

The TPMS consists of the following components:

• Receiver module
• Four Tire Pressure Monitoring Sensors
• Various Tire Pressure Monitoring System messages, which display in the instrument cluster
• Tire Pressure Monitoring Telltale Light

Tire Pressure Monitoring Low Pressure Warnings

The “Tire Pressure Monitoring Telltale Light” will illuminate in the instrument cluster and a chime will sound when tire pressure is low in one or more of the four active road tires. In addition, the instrument cluster will display a low pressure graphic showing the low tire pressure tire highlighted in a different color.
Should this occur, you should stop as soon as possible and inflate the tires with low pressure to the vehicle’s recommended cold placard pressure value. Once the system receives the updated tire pressures, the system will automatically update and the “Tire Pressure Monitoring Telltale Light” will turn off. The vehicle may need to be driven for up to 20 minutes above 15 mph (24 km/h) in order for the TPMS to receive this information.

**TPMS Warning**

When a system fault is detected, the “Tire Pressure Monitoring Telltale Light” will flash on and off for 75 seconds and then remain on solid. The system fault will sound a chime and also display a “Service Tire Pressure Monitoring System” message in the instrument cluster for approximately 5 seconds.

**Low Tire Indicator**

If the ignition switch is cycled, this sequence will repeat, providing the system fault still exists. If the system fault no longer exists, the “Tire Pressure Monitoring Telltale Light” will no longer flash, and the “Service TPM System” message will no longer display.
A system fault can occur due to any of the following:

1. Signal interference due to electronic devices or driving next to facilities emitting the same radio frequencies as the TPM sensors.

2. Installing aftermarket window tinting that contains materials that may block radio wave signals.

3. Accumulation of snow or ice around the wheels or wheel housings.

4. Using tire chains on the vehicle.

5. Using wheels/tires not equipped with TPM sensors.

NOTE:

- The TPMS will not monitor the pressure in a replacement tire installed without a tire pressure sensor.

- If you install a replacement tire in place of a road tire that has a pressure below the low-pressure warning limit, upon the next ignition switch cycle, the “Tire Pressure Monitoring Telltale Light” will remain on and a chime will sound. In addition, the highlighted graphic in the instrument cluster will still display a low pressure text message and a pressure value in a different color.

- After driving the vehicle for up to 20 minutes above 15 mph (24 km/h), the “Tire Pressure Monitoring Telltale Light” will flash on and off for 75 seconds and then remain on solid. In addition, the instrument cluster will display a “Service Tire Pressure Monitoring System” message.

- For each subsequent ignition switch cycle, a chime will sound, the “Tire Pressure Monitoring Telltale Light” will flash on and off for 75 seconds and then remain on solid, and the instrument cluster will display a “Service TPM System” message.

Once you repair or replace the original road tire and reinstall it, the TPMS will update automatically. In addition, the “Tire Pressure Monitoring Telltale Light” will turn off, as long as no tire pressure is below the low-pressure warning limit in any of the four active road tires. The vehicle may need to be driven for up to 20 minutes above 15 mph (24 km/h) in order for the TPMS to receive this information.
General Information
This device complies with Part 15 of the FCC rules and RSS-210 of Industry Canada. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference.
(2) This device must accept any interference received, including interference that may cause undesired operation.

RECREATIONAL TOWING (BEHIND MOTORHOME, ETC.)
Towing This Vehicle Behind Another Vehicle

<table>

</tr>
</tbody>
</table>

NOTE: Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

TRAILER TOWING
Trailer towing with this vehicle is not recommended.
NOTE:

- When towing your vehicle, always follow applicable state and provincial laws. Contact state and provincial Highway Safety offices for additional details.
- This vehicle must be towed on a dolly or vehicle trailer with the front wheels OFF the ground.

CAUTION!

Towing this vehicle in violation of the above requirements can cause severe transmission damage. Damage from improper towing is not covered under the New Vehicle Limited Warranty.

EXTENDING YOUR DRIVING RANGE PER CHARGE

The drive system and cabin temperature management features use the most energy from the high voltage battery. Reducing energy draw from these features are the easiest and most effective way to extend driving range.

The 500e uses high voltage components to heat and cool the cabin, so when using automatic climate control, consider setting temperatures a few degrees higher or lower during hot and cold days. If your 500e has been soaking in hot or cold temperatures for an extended period, it is recommended that the car be preconditioned using the Uconnect Access smartphone app while still plugged into a charging source. This will allow 500e to use external power to establish a comfortable cabin temperature before the drive and allow the battery to maintain the temperature at significantly lower energy levels.

Additional tips:

- Keep tires properly inflated
- When practical, choose surface streets over the highway, and work to maintain a steady speed
- Avoid carrying nonessential cargo
- Be mindful of adding external accessories that may increase aerodynamic drag
- Perform all scheduled maintenance at recommended intervals
Driver Behavior Gauge

To help the driver extend the driving range of the high voltage battery your vehicle is equipped with a Driver Behavior Gauge. The Driver Behavior Gauge is located on the right side of the instrument cluster and contains three driving ranges:

- **Power**
  The needle will move into the Power range when under acceleration.

- **ECO**
  The needle will move into the ECO range when you are maximizing the driving range of the high voltage battery.

- **Charge**
  The needle will move into the Charge range when battery regeneration is active (either coasting or braking).
**Range Projection**

This area of the cluster is used to display the projected range considering current battery charge and previous energy use. The two arrows to the left of the mileage are used to forecast the effect of recent driving.

- When both arrows are grey, expect the range to drop approximately one mile for each mile driven.
- When the up arrow is highlighted, expect the range number to hold steady or increase while driving.
- When the down arrow is highlighted, expect the range number to decrease more than one mile for each mile driven.

HAZARD WARNING FLASHERS

The Hazard Warning flasher switch is located on the instrument panel below the radio.

⚠️ Push the switch to turn on the Hazard Warning flashers. When the switch is activated, all directional turn signals will flash on and off to warn oncoming traffic of an emergency. Push the switch a second time to turn off the Hazard Warning flashers.

Do not use this emergency warning system when the vehicle is in motion. Use it when your vehicle is disabled and it is creating a safety hazard for other motorists.

If it is necessary to leave the vehicle to go for service, the Hazard Warning flashers will continue to operate with the ignition key removed and the vehicle locked.

NOTE: With extended use, the Hazard Warning flashers may wear down your battery.

WHEEL AND TIRE TORQUE SPECIFICATIONS

Proper lug nut/bolt torque is very important to ensure that the wheel is properly mounted to the vehicle. Any time a wheel has been removed and reinstalled on the vehicle, the lug nuts/bolts should be torqued using a properly calibrated torque wrench.

Torque Specifications

<table>
<thead>
<tr>
<th>Lug Nut/Bolt Torque</th>
<th>**Lug Nut/Bolt Size</th>
<th>Lug Nut/Bolt Socket Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>66 Ft-Lbs (90 N·m)</td>
<td>M12 x 1.25</td>
<td>17 mm</td>

<td></td>
<td></td>
</tr>
<tr>
<td>Aluminum Wheels</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Only</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Use only your authorized dealer recommended lug nuts/bolts and clean or remove any dirt or oil before tightening.
Inspect the wheel mounting surface prior to mounting the tire and remove any corrosion or loose particles.

**Wheel Mounting Surface**

Tighten the lug nuts/bolts in a star pattern until each nut/bolt has been tightened twice.

**Torque Patterns**

After 25 miles (40 km), check the lug nut/bolt torque to be sure that all the lug nuts/bolts are properly seated against the wheel.

**WARNING!**

To avoid the risk of forcing the vehicle off the jack, do not tighten the lug nuts fully until the vehicle has been lowered. Failure to follow this warning may result in personal injury.
TIRE SERVICE KIT — IF EQUIPPED

Small punctures up to 1/4 inch (6 mm) in the tire tread can be sealed with Tire Service Kit. Foreign objects (e.g., screws or nails) should not be removed from the tire. Tire Service Kit can be used in outside temperatures down to approximately -4°F (-20°C).

This kit will provide a temporary tire seal, allowing you to drive your vehicle up to 100 miles (160 km) with a maximum speed of 55 mph (90 km/h).

Tire Service Kit Storage

The Tire Service Kit is located in the rear cargo area.

Tire Service Kit Components And Operation

Tire Service Kit Components

1 — Sealant Bottle  5 — Mode Select Knob
2 — Deflation Button  6 — Sealant Hose (Clear)
3 — Pressure Gauge  7 — Air Pump Hose (Black)
4 — Power Button  8 — Power Plug (located on the bottom side of the Tire Service Kit)
Using The Mode Select Knob And Hoses

Your Tire Service Kit is equipped with the following symbols to indicate the air or sealant mode.

Selecting Air Mode

Push in the Mode Select Knob (5) and turn to this position for air pump operation only. Use the Black Air Pump Hose (7) when selecting this mode.

Selecting Sealant Mode

Push in the Mode Select Knob (5) and turn to this position to inject the Tire Service Kit Sealant and to inflate the tire. Use the Sealant Hose (clear hose) (6) when selecting this mode.

Using The Power Button

Push and release the Power Button (4) once to turn on the Tire Service Kit. Push and release the Power Button (4) again to turn Off the Tire Service Kit.

Using The Deflation Button

Push the Deflation Button (2) to reduce the air pressure in the tire if it becomes over-inflated.

Tire Service Kit Usage Precautions

- Replace the Tire Service Kit Sealant Bottle (1) and Sealant Hose (6) prior to the expiration date (printed at the lower right hand corner on the bottle label) to assure optimum operation of the system. Refer to “Sealing A Tire With Tire Service Kit” section (F) “Sealant Bottle And Hose Replacement”.

- The Sealant Bottle (1) and Sealant Hose (6) are a one tire application use and need to be replaced after each use. Always replace these components immediately at your original equipment vehicle dealer.
When the Tire Service Kit sealant is in a liquid form, clean water, and a damp cloth will remove the material from the vehicle or tire and wheel components. Once the sealant dries, it can easily be peeled off and properly discarded.

For optimum performance, make sure the valve stem on the wheel is free of debris before connecting the Tire Service Kit.

You can use the Tire Service Kit air pump to inflate bicycle tires. The kit also comes with two needles, located in the Accessory Storage Compartment (on the bottom of the air pump) for inflating sport balls, rafts, or similar inflatble items. However, use only the Air Pump Hose (7) and make sure the Mode Select Knob (5) is in the Air Mode when inflating such items to avoid injecting sealant into them. The Tire Service Kit Sealant is only intended to seal punctures less than 1/4 inch (6 mm) diameter in the tread of your tire.

Do not lift or carry the Tire Service Kit by the hoses.

**WARNING!**

- Do not attempt to seal a tire on the side of the vehicle closest to traffic. Pull far enough off the road to avoid the danger of being hit when using the Tire Service Kit.
- Do not use Tire Service Kit or drive the vehicle under the following circumstances:
  - If the puncture in the tire tread is approximately 1/4 inch (6 mm) or larger.
  - If the tire has any sidewall damage.
  - If the tire has any damage from driving with extremely low tire pressure.
  - If the tire has any damage from driving on a flat tire.
  - If the wheel has any damage.
  - If you are unsure of the condition of the tire or the wheel.
- Keep Tire Service Kit away from open flames or heat sources.
- A loose Tire Service Kit thrown forward in a collision or hard stop could endanger the occupants of the vehicle. Always stow the Tire Service Kit in the place provided. Failure to follow these
**WARNING! (Continued)**

warnings can result in injuries that are serious or fatal to you, your passengers, and others around you.

- Take care not to allow the contents of Tire Service Kit to come in contact with hair, eyes, or clothing. Tire Service Kit sealant is harmful if inhaled, swallowed, or absorbed through the skin. It causes skin, eye, and respiratory irritation. Flush immediately with plenty of water if there is any contact with eyes or skin. Change clothing as soon as possible, if there is any contact with clothing.

- Tire Service Kit Sealant solution contains latex. In case of an allergic reaction or rash, consult a physician immediately. Keep Tire Service Kit out of reach of children. If swallowed, rinse mouth immediately with plenty of water and drink plenty of water. Do not induce vomiting! Consult a physician immediately.

---

**Sealing A Tire With Tire Service Kit**

(A) Whenever You Stop To Use Tire Service Kit:

1. Pull over to a safe location and turn on the vehicle’s Hazard Warning flashers.

2. Verify that the valve stem (on the wheel with the deflated tire) is in a position that is near to the ground. This will allow the Tire Service Kit Hoses (6) and (7) to reach the valve stem and keep the Tire Service Kit flat on the ground. This will provide the best positioning of the kit when injecting the sealant into the deflated tire and running the air pump. Move the vehicle as necessary to place the valve stem in this position before proceeding.

3. Place the transmission in PARK (auto transmission) or in Gear (manual transmission) and place the ignition in the OFF position.

4. Apply the parking brake.

(B) Setting Up To Use Tire Service Kit:

1. Push in the Mode Select Knob (5) and turn to the Sealant Mode position.

2. Uncoil the Sealant Hose (6) and then remove the cap from the fitting at the end of the hose.

3. Place the Tire Service Kit flat on the ground next to the deflated tire.
4. Remove the cap from the valve stem and then screw the fitting at the end of the Sealant Hose (6) onto the valve stem.

5. Uncoil the Power Plug (8) and insert the plug into the vehicle’s 12 Volt power outlet.

NOTE: Do not remove foreign objects (e.g., screws or nails) from the tire.

(C) Injecting Tire Service Kit Sealant Into The Deflated Tire:

- Always start the engine before turning on the Tire Service Kit.

NOTE: Manual transmission vehicles must have the parking brake engaged and the gear selector in NEUTRAL.

- After pushing the Power Button (4), the sealant (white fluid) will flow from the Sealant Bottle (1) through the Sealant Hose (6) and into the tire.

NOTE: Sealant may leak out through the puncture in the tire.

If the sealant (white fluid) does not flow within 0 – 10 seconds through the Sealant Hose (6):

1. Push the Power Button (4) to turn off the Tire Service Kit. Disconnect the Sealant Hose (6) from the valve stem. Make sure the valve stem is free of debris. Reconnect the Sealant Hose (6) to the valve stem. Check that the Mode Select Knob (5) is in the Sealant Mode position and not Air Mode. Push the Power Button (4) to turn on the Tire Service Kit.

2. Connect the Power Plug (8) to a different 12 Volt power outlet in your vehicle or another vehicle, if available. Make sure the engine is running before turning on the Tire Service Kit.

3. The Sealant Bottle (1) may be empty due to previous use. Call for assistance.

NOTE: If the Mode Select Knob (5) is on Air Mode and the pump is operating, air will dispense from the Air Pump Hose (7) only, not the Sealant Hose (6).
If the sealant (white fluid) does flow through the Sealant Hose (6):

1. Continue to operate the pump until sealant is no longer flowing through hose (typically takes 30 - 70 seconds). As the sealant flows through the Sealant Hose (6), the Pressure Gauge (3) can read as high as 70 psi (4.8 Bar). The Pressure Gauge (3) will decrease quickly from approximately 70 psi (4.8 Bar) to the actual tire pressure when the Sealant Bottle (1) is empty.

2. The pump will start to inject air into the tire immediately after the Sealant Bottle (1) is empty. Continue to operate the pump and inflate the tire to the pressure indicated on the tire pressure label on the driver-side latch pillar (recommended pressure). Check the tire pressure by looking at the Pressure Gauge (3).

If the tire does not inflate to at least 26 psi (1.8 Bar) pressure within 15 minutes:

- The tire is too badly damaged. Do not attempt to drive the vehicle further. Call for assistance.

NOTE: If the tire becomes overinflated, push the Deflation Button to reduce the tire pressure to the recommended inflation pressure before continuing.

If the tire inflates to the recommended pressure or is at least 26 psi (1.8 Bar) pressure within 15 minutes:

1. Push the Power Button (4) to turn off the Tire Service Kit.

2. Remove the Speed Limit sticker from the top of the Sealant Bottle (1) and place the sticker on the instrument panel.

3. Immediately disconnect the Sealant Hose (6) from the valve stem, reinstall the cap on the fitting at the end of the hose, and place the Tire Service Kit in the vehicle storage location. Quickly proceed to (D) “Drive Vehicle.”

CAUTION!

- The metal end fitting from Power Plug (8) may get hot after use, so it should be handled carefully.
- Failure to reinstall the cap on the fitting at the end of the Sealant Hose (6) can result in sealant

(Continued)
CAUTION! (Continued)

contacting your skin, clothing, and the vehicle’s interior. It can also result in sealant contacting internal Tire Service Kit components which may cause permanent damage to the kit.

(D) Drive Vehicle:
Immediately after injecting sealant and inflating the tire, drive the vehicle 5 miles (8 km) or 10 minutes to ensure distribution of the Tire Service Kit Sealant within the tire. Do not exceed 55 mph (90 km/h).

WARNING!
Tire Service Kit is not a permanent flat tire repair. Have the tire inspected and repaired or replaced after using Tire Service Kit. Do not exceed 55 mph (90 km/h) until the tire is repaired or replaced. Failure to follow this warning can result in injuries that are serious or fatal to you, your passengers, and others around you.

(E) After Driving:
Pull over to a safe location. Refer to “Whenever You Stop To Use Tire Service Kit” before continuing.

1. Push in the Mode Select Knob (5) and turn to the Air Mode position.
2. Uncoil the power plug and insert the plug into the vehicle’s 12 Volt power outlet.
3. Uncoil the Air Pump Hose (7) (black in color) and screw the fitting at the end of hose (7) onto the valve stem.
4. Check the pressure in the tire by reading the Pressure Gauge (3).

If tire pressure is less than 19 psi (1.3 Bar):
The tire is too badly damaged. Do not attempt to drive the vehicle further. Call for assistance.

If the tire pressure is 19 psi (1.3 Bar) or higher:
1. Push the Power Button (4) to turn on Tire Service Kit and inflate the tire to the pressure indicated on the tire and loading information label on the driver-side door opening.

NOTE: If the tire becomes over-inflated, push the Deflation Button to reduce the tire pressure to the recommended inflation pressure before continuing.
2. Disconnect the Tire Service Kit from the valve stem, reinstall the cap on the valve stem and unplug from 12 Volt outlet.

3. Place the Tire Service Kit in its proper storage area in the vehicle.

4. Have the tire inspected and repaired or replaced at the earliest opportunity at an authorized dealer or tire service center.

5. Remove the Speed Limit sticker from the instrument panel after the tire has been repaired.

6. Replace the Sealant Bottle (1) and Sealant Hose (6) assembly at your authorized dealer as soon as possible. Refer to (F) “Sealant Bottle And Hose Replacement”.

**NOTE:** When having the tire serviced, advise the authorized dealer or service center that the tire has been sealed using the Tire Service Kit.

**(F) Sealant Bottle And Hose Replacement:**

1. Uncoil the Sealant Hose (6) (clear in color).

2. Locate the round Sealant Bottle release button in the recessed area under the sealant bottle.

3. Push the Sealant Bottle release button. The Sealant Bottle (1) will pop up. Remove the bottle and dispose of it accordingly.

4. Clean any remaining sealant from the Tire Service Kit housing.

5. Position the new Sealant Bottle (1) in the housing so that the Sealant Hose (6) aligns with the hose slot in the front of the housing. Push the bottle into the housing. An audible click will be heard indicating the bottle is locked into place.

6. Verify that the cap is installed on the fitting at the end of the Sealant Hose (6) and return the hose to its storage area (located on the bottom of the air pump).

7. Return the Tire Service Kit to its storage location in the vehicle.
JUMP-STARTING PROCEDURE (12 VOLT BATTERY ONLY)

If your vehicle has a discharged 12 Volt battery, it can be jump-started using a set of jumper cables and a battery in another vehicle or by using a portable battery booster pack. Jump-starting can be dangerous if done improperly so please follow the procedures in this section carefully.

NOTE: When using a portable battery booster pack, follow the manufacturer’s operating instructions and precautions.

**WARNING!**

Do not attempt jump-starting if the battery is frozen. It could rupture or explode and cause personal injury.

**CAUTION!**

Do not use a portable battery booster pack or any other booster source with a system voltage greater than 12 Volts or damage to the battery, power electronics or electrical system may occur.

Preparations For Jump-Start

The battery in your vehicle is located in the underhood compartment under the beauty cover. To access the battery pull upward on the cover.

Battery Posts

1 — Positive (+) Post (Covered With Protective Cap)
2 — Negative (-) Post
1. Set the parking brake, place the transmission into PARK and turn the ignition to LOCK.
2. Turn off the heater, radio, and all unnecessary electrical accessories.
3. Remove the protective cover over the positive (+) battery post.
4. If using another vehicle to jump-start the battery, park the vehicle within the jumper cables reach, set the parking brake and make sure the ignition is OFF.

WARNING!

- Take care to avoid the radiator cooling fan whenever the hood is raised. It can start anytime the ignition switch is ON. You can be injured by moving fan blades.
- Remove any metal jewelry such as rings, watch bands and bracelets that could make an inadvertent electrical contact. You could be seriously injured.
- Batteries contain sulfuric acid that can burn your skin or eyes and generate hydrogen gas which is flammable and explosive. Keep open flames or sparks away from the battery.

WARNING!

Do not allow vehicles to touch each other as this could establish a ground connection and personal injury could result.

Jump-Starting Procedure

WARNING!

Failure to follow this jump-starting procedure could result in personal injury or property damage due to battery explosion.

CAUTION!

Failure to follow these procedures could result in damage to the charging system of the booster vehicle or the discharged vehicle.
Connecting The Jumper Cables

1. Connect the positive (+) end of the jumper cable to the positive (+) post of the discharged vehicle.
2. Connect the opposite end of the positive (+) jumper cable to the positive (+) post of the booster battery.
3. Connect the negative end (-) of the jumper cable to the negative (-) post of the booster battery.
4. Connect the opposite end of the negative (-) jumper cable to a good engine ground (exposed metal part of the discharged vehicle underhood compartment) away from the battery.

**WARNING!**

Do not connect the jumper cable to the negative (-) post of the discharged battery. The resulting electrical spark could cause the battery to explode and could result in personal injury. Only use the specific ground point, do not use any other exposed metal parts.

5. Start the engine in the vehicle that has the booster battery, let the engine idle a few minutes, and then turn the key to RUN position on the vehicle with the discharged battery.
6. Once the vehicle is started, remove the jumper cables in the reverse sequence.

Disconnecting The Jumper Cables

1. Disconnect the negative (-) jumper cable from the engine ground (-) of the vehicle with the discharged battery.
2. Disconnect the negative end (-) of the jumper cable from the negative (-) post of the booster battery.
3. Disconnect the opposite end of the positive (+) jumper cable from the positive (+) post of the booster battery.
4. Disconnect the positive (+) end of the jumper cable from the positive (+) post of the discharged vehicle.

If frequent jump-starting is required to start your vehicle, you should have the battery and charging system inspected at your authorized dealer.
FREEING A STUCK VEHICLE

If your vehicle becomes stuck in mud, sand or snow, it can often be moved using a rocking motion. Turn the steering wheel right and left to clear the area around the front wheels. Then, shift back and forth between DRIVE and REVERSE while gently pressing the accelerator. Use the least amount of accelerator pedal pressure that will maintain the rocking motion, without spinning the wheels.

NOTE: Push the "ESC Off" switch, to place the Electronic Stability Control (ESC) system in "Partial Off" mode, before rocking the vehicle. Refer to “Electronic Brake Control” in “Starting And Operating” for further information. Once the vehicle has been freed, push the "ESC Off" switch again to restore "ESC On" mode.

WARNING!

Fast spinning tires can be dangerous. Forces generated by excessive wheel speeds may cause damage,
MANUAL PARK RELEASE

WARNING!
Always secure your vehicle by fully applying the parking brake, before activating the Manual Park Release. Activating the Manual Park Release will allow your vehicle to roll away if it is not secured by the parking brake or other means. Activating the Manual Park Release on an unsecured vehicle could lead to serious injury or death for those in or around the vehicle.

In order to move the vehicle in cases where the transmission will not shift out of PARK (such as a dead battery), a Manual Park Release is available. If a dead 12 volt battery is the cause of the condition refer to “Jump Start Procedure — 12 Volt Battery” before performing the Manual Park Release.

To perform the Manual Park Release follow these steps:

1. To prevent the vehicle from rolling unintentionally, firmly apply the parking brake.

2. If possible, raise the front driver’s side of the vehicle to provide access to the transmission.

3. Working from underneath the vehicle, remove the black rubber plug from the front of the Park module (a black canister mounted on the front of the transmission).

4. Using a T25 driver bit, rotate the Manual Park Release shaft (located just behind the rubber plug) clockwise, at least 20 turns, to release the Park mechanism. The vehicle is now out of PARK and can be moved.

Manual Park Release Location
5. Reinstall the rubber plug.

6. Release the parking brake only when a driver is in the vehicle, or the vehicle is secured by other means. The Manual Park Release will be reset automatically once the vehicle is restarted.

TOWING A DISABLED VEHICLE

This section describes procedures for towing a disabled vehicle using a commercial towing service.

<table>
<thead>
<tr>
<th>Towing Condition</th>
<th>Wheels OFF The Ground</th>
<th>SINGLE-SPEED TRANSMISSION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flat Tow</td>
<td>NONE</td>
<td>NOT ALLOWED</td>
</tr>
<tr>
<td>Wheel Lift or Dolly Tow</td>
<td>Rear</td>
<td>NOT ALLOWED</td>
</tr>
<tr>
<td></td>
<td>Front</td>
<td>OK</td>
</tr>
<tr>
<td>Flatbed</td>
<td>ALL</td>
<td>OK</td>
</tr>
</tbody>
</table>

This vehicle must be towed with the front wheels OFF the ground.

If you must use the accessories (wipers, defrosters, etc.) while being towed, the ignition must be in the ON/RUN mode.

If the ignition key is unavailable, or the vehicle’s battery is discharged, see “Manual Park Release” in “What To Do In Emergencies” for instructions on shifting the transmission out of PARK in order to move the vehicle.

CAUTION!

- Do not use sling-type equipment when towing. Vehicle damage may occur.
- When securing the vehicle to a flatbed truck, do not attach to front or rear suspension components. Damage to your vehicle may result from improper towing.
This vehicle is equipped with an Enhanced Accident Response System.

**EVENT DATA RECORDER (EDR)**

This vehicle is equipped with an Event Data Recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed.

Please refer to “Occupant Restraint Systems” in “Things To Know Before Starting Your Vehicle” for further information on the Event Data Recorder (EDR).

ONBOARD DIAGNOSTIC SYSTEM (OBD II)

Your vehicle is required to have an Onboard Diagnostic system (OBD II) and a connection port to allow access to information related to the performance of your emissions controls. Authorized service technicians may need to access this information to assist with the diagnosis and service of your vehicle and emissions system.

**WARNING!**

- ONLY an authorized service technician should connect equipment to the OBD II connection port in order to diagnose or service your vehicle.
- If unauthorized equipment is connected to the OBD II connection port, such as a driver-behavior tracking device, it may:
  - Be possible that vehicle systems, including safety related systems, could be impaired or a loss of vehicle control could occur that may result in an accident involving serious injury or death.
  - Access, or allow others to access, information stored in your vehicle systems, including personal information.

For further information, refer to “Cybersecurity” in the “Understanding Your Instrument Panel” section.

REPLACEMENT PARTS

Use of genuine parts for normal/scheduled maintenance and repairs is highly recommended to ensure the designed performance. Damage or failures caused by the use of parts which are not quality-equivalent to genuine parts for maintenance and repairs will not be covered by the manufacturer’s warranty.

DEALER SERVICE

Your authorized dealer has the qualified service personnel, special tools, and equipment to perform all service operations in an expert manner. Service Manuals are available which include detailed service information for your vehicle. Refer to these Service Manuals before attempting any procedure yourself.

**NOTE:** Intentional tampering with emissions control systems may void your warranty and could result in civil penalties being assessed against you.
**WARNING!**
You can be badly injured working on or around a motor vehicle. Only do service work for which you have the knowledge and the proper equipment. If you have any doubt about your ability to perform a service job, take your vehicle to a competent mechanic.

**MAINTENANCE PROCEDURES**

**WARNING!**
Your vehicle has both a high voltage DC and AC system as well as a 12 Volt system. DC and AC high voltage are both extremely dangerous and can cause severe burns, electric shock, serious injury or even death. In order to avoid personal injuries:
- **DO NOT TOUCH THE HIGH VOLTAGE CABLES (ORANGE COLORED) AND/OR THE CONNECTORS.**
- Follow all Caution and Warning labels attached to the High Voltage components.
- Do not remove or replace any of the 500e System components. All replacement or repairs of 500e System components should be performed by a factory-trained technician at an authorized dealer.

The pages that follow contain the required maintenance services determined by the engineers who designed your vehicle.

Besides those maintenance items specified in the fixed maintenance schedule, there are other components which may require servicing or replacement in the future.

**CAUTION!**
- Failure to properly maintain your vehicle or perform repairs and service when necessary could result in more costly repairs, damage to other components or negatively impact vehicle performance. Immediately have potential malfunctions examined by an authorized dealer or qualified repair center.
- Your vehicle has been built with improved fluids that protect the performance and durability of...
CAUTION! (Continued)
your vehicle and also allow extended maintenance intervals. Do not use chemical flushes in these components as the chemicals can damage them. Such damage is not covered by the New Vehicle Limited Warranty. If a flush is needed because of component malfunction, use only the specified fluid for the flushing procedure.

Power Electronics And Battery Thermal Management Systems

The Power Electronics and Battery Thermal Management Systems are completely separate and designed to regulate temperature for the high voltage battery and the electric components.

Power Electronics And Battery Thermal Management Systems — Coolant Level Check

The coolant expansion bottles provide a quick visual method for determining that the coolant level is adequate. With the vehicle off and coolant at ambient temperature, the level of the coolant (antifreeze) in the bottles should be between the bottom and top lines marked “MIN-MAX FILL RANGE”.

Coolant MIN/MAX

As long as the vehicle operating temperature is satisfactory, the coolant bottles need only be checked once a month.

When additional coolant (antifreeze) is needed to maintain the proper level, it should be added to the coolant bottles. Do not overfill.

Check the Power Electronics and Battery Thermal Management Systems coolant (antifreeze) protection every 12 months (before the onset of freezing weather, where applicable).
Maintain coolant (antifreeze) concentration at a minimum of 50% Mopar Antifreeze/Coolant 10 Year/150,000 Mile Formula OAT (Organic Additive Technology) and distilled/deionized water for proper corrosion protection.

Check the coolant bottles tubing for brittle rubber, cracking, tears, cuts and tightness of the connection at the bottles and radiator. Inspect the entire system for leaks.

Check the front of the A/C condenser for any accumulation of bugs, leaves, etc. If dirty, clean by gently spraying water from a garden hose vertically down the face of the condenser.

**NOTE:** DO NOT REMOVE THE COOLANT PRESSURE CAP WHEN THE COOLING SYSTEM IS HOT.

**WARNING!**
You or others can be badly burned by hot coolant (antifreeze) or steam from your radiator. If you see or hear steam coming from under the hood, do not open the hood until the radiator has had time to cool. Never try to open a cooling system pressure cap when the radiator is hot.
Power Electronics And Battery Thermal Management Systems — Cooling Pressure Caps

The caps must be fully tightened to prevent loss of coolant (antifreeze).

The caps should be inspected and cleaned if there is any accumulation of foreign material on the sealing surfaces.

NOTE:
- The pressure caps on the reservoirs are unique and rated at 5 PSI caps.
- Use only Mopar replacement parts.

WARNING!
- The warning words “DO NOT OPEN HOT” on the cooling system pressure cap are a safety precaution. Never add coolant (antifreeze) when the cooling system is overheated. Do not loosen or remove the cap to cool an overheated cooling system. Heat causes pressure to build up in the cooling system. To prevent scalding or injury, do not remove the pressure cap while the system is hot or under pressure.

Selection Of Coolant

Refer to “Fluids, Lubricants, And Genuine Parts” in “Maintaining Your Vehicle” for further information.

CAUTION!
- Mixing of coolant (antifreeze) other than specified Organic Additive Technology (OAT) coolant (antifreeze), may result in cooling system damage and may decrease corrosion protection. Organic Additive Technology (OAT) coolant is different and should not be mixed with Hybrid Organic Additive Technology (HOAT) coolant (antifreeze). If a non-OAT coolant (antifreeze) is introduced into the cooling system in an emergency, it should be replaced with the specified coolant (antifreeze) as soon as possible.
CAUTION! (Continued)

• Do not use water alone or alcohol-based coolant (antifreeze) products. Do not use additional rust inhibitors or antitrust products, as they may not be compatible with the radiator coolant and may plug the radiator.
• This vehicle has not been designed for use with propylene glycol-based coolant (antifreeze). Use of propylene glycol-based coolant (antifreeze) is not recommended.

Adding Coolant

Your vehicle has been built with cooling systems that allow extended maintenance intervals. This coolant (antifreeze) can be used up to ten years or 150,000 miles (240,000 km) before replacement. To prevent reducing this extended maintenance period, it is important that you use the same coolant (antifreeze) throughout the life of your vehicle.

Please review these recommendations for using Organic Additive Technology (OAT) coolant (antifreeze).

When adding coolant (antifreeze):

• The manufacturer recommends using Mopar Antifreeze/Coolant 10 Year/150,000 Mile Formula OAT (Organic Additive Technology).
• Mix a minimum solution of 50% OAT coolant (antifreeze) and distilled water. Use higher concentrations (not to exceed 70%) if temperatures below -34°F (-37°C) are anticipated.
• Use only high purity water such as distilled or deionized water when mixing the water and coolant (antifreeze) solution. The use of lower quality water will reduce the amount of corrosion protection in the cooling systems.

Please note that it is the owner’s responsibility to maintain the proper level of protection against freezing according to the temperatures occurring in the area where the vehicle is operated.

NOTE: Mixing coolant (antifreeze) types will decrease the life of the Power Electronics and Battery Thermal Management Systems coolant (antifreeze) and will require more frequent coolant (antifreeze) changes.
Power Electronics And Battery Thermal Management Systems — Drain, Flush And Refill

Refer to “Maintenance Schedules” for the proper maintenance intervals.

If the coolant (antifreeze) is dirty or contains a considerable amount of sediment, clean and flush with a reliable cooling system cleaner. Follow with a thorough rinsing to remove all deposits and chemicals. Properly dispose of old coolant (antifreeze) solution.

CAUTION!

It is recommended to have the cooling systems serviced at your authorized dealer. Failure to do so could result in poor cooling system performance and/or vehicle damage.

Disposal Of Used Power Electronics And Battery Thermal Management Systems Coolant

Used antifreeze is a regulated substance requiring proper disposal. Check with your local authorities to determine the disposal rules for your community. To prevent ingestion by animals or children, do not store antifreeze in open containers or allow it to remain in puddles on the ground. If ingested by a child, contact a physician immediately. Clean up any ground spills immediately.

Points To Remember

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Turn vehicle OFF and disconnect the fan motor lead before working near the radiator cooling fan.</td>
</tr>
<tr>
<td>• You or others can be badly burned by hot engine coolant (antifreeze) or steam from your radiator. If you see or hear steam coming from under the hood, do not open the hood until the radiator has had time to cool. Never open a cooling system pressure cap when the radiator or coolant bottle is hot.</td>
</tr>
<tr>
<td>• Do not put your hands, tools, clothing, and jewelry near the radiator cooling fan. The fan may start at any time, whether the ignition is on or off.</td>
</tr>
</tbody>
</table>

If an examination of your underhood compartment shows no evidence of cooler or hose leaks, the vehicle may be safely driven.

• Do not overfill the coolant recovery bottles.
• Check coolant (antifreeze) freeze point in the coolant.
recovery bottles. If coolant (antifreeze) needs to be added, contents of coolant recovery bottles must also be protected against freezing.

- If frequent coolant (antifreeze) additions are required, or if the level in the coolant recovery bottles does not drop when the engine cools, the cooling system should be pressure tested for leaks.
- Maintain coolant (antifreeze) concentration at 50% OAT coolant (antifreeze) (minimum) and distilled/deionized water for proper corrosion protection of your engine which contains aluminum components.
- Make sure that the coolant control systems recovery bottles overflow hoses are not kinked or obstructed.
- Keep the front of the coolant control systems clean. If your vehicle is equipped with air conditioning, keep the front of the condenser clean.

**Maintenance-Free Battery 12 Volt**

Your vehicle is equipped with a maintenance-free 12 Volt battery. You will never have to add water, nor is periodic maintenance required.

**WARNING!**

- Battery fluid is a corrosive acid solution and can burn or even blind you. Do not allow battery fluid to contact your eyes, skin, or clothing. Do not lean over a battery when attaching clamps. If acid splashes in eyes or on skin, flush the area immediately with large amounts of water. Refer to “Jump-Starting Procedures” in “What To Do In Emergencies” for further information.
- Battery gas is flammable and explosive. Keep flame or sparks away from the battery. Do not use a booster battery or any other booster source with an output greater than 12 Volts. Do not allow cable clamps to touch each other.
- Battery posts, terminals, and related accessories contain lead and lead compounds. Wash hands after handling.
- The battery in this vehicle has a vent hose that should not be disconnected and should only be replaced with a battery of the same type (vented).
CAUTION!

- It is essential when replacing the cables on the battery that the positive cable is attached to the positive post and the negative cable is attached to the negative post. Battery posts are marked positive (+) and negative (-) and are identified on the battery case. Cable clamps should be tight on the terminal posts and free of corrosion.
- If a 12 Volt Low Voltage Battery System “fast charger” is used while the battery is in the vehicle, disconnect both vehicle battery cables before connecting the charger to the battery. Do not use a “fast charger” to provide starting voltage.

Air Conditioner Maintenance

For best possible performance, your air conditioner should be checked and serviced by an authorized dealer at the start of each warm season. This service should include cleaning of the condenser fins and air conditioning performance tests.

CAUTION!

Do not use chemical flushes in your air conditioning system as the chemicals can damage your air conditioning components. Such damage is not covered by the New Vehicle Limited Warranty.

WARNING!

- Use only refrigerants and compressor lubricants approved by the manufacturer for your air conditioning system. Some unapproved refrigerants are flammable and can explode, injuring you. Other unapproved refrigerants or lubricants can cause the system to fail, requiring costly repairs. Refer to Warranty Information Book, located on the DVD, for further warranty information.
- The air conditioning system contains refrigerant under high pressure. To avoid risk of personal injury or damage to the system, adding refrigerant or any repair requiring lines to be disconnected should be done by an experienced technician.
Body Lubrication

Locks and all body pivot points, including such items as seat tracks, door hinge pivot points and rollers, liftgate, tailgate, decklid, sliding doors and hood hinges, should be lubricated periodically with a lithium based grease, such as Mopar Spray White Lube to assure quiet, easy operation and to protect against rust and wear. Prior to the application of any lubricant, the parts concerned should be wiped clean to remove dust and grit; after lubricating excess oil and grease should be removed. Particular attention should also be given to hood latching components to ensure proper function. When performing other underhood services, the hood latch, release mechanism and safety catch should be cleaned and lubricated.

The external lock cylinders should be lubricated twice a year, preferably in the Fall and Spring. Apply a small amount of a high quality lubricant, such as Mopar Lock Cylinder Lubricant directly into the lock cylinder.

Wiper Blades

Clean the rubber edges of the wiper blades and the windshield and rear window periodically with a sponge or soft cloth and a mild nonabrasive cleaner. This will remove accumulations of salt, waxes, or road film, and help reduce streaking and smearing.

Operation of the wipers on dry glass for long periods may cause deterioration of the wiper blades. Always use washer fluid when using the wipers to remove salt or dirt from a dry windshield or rear window.

Avoid using the wiper blades to remove frost or ice from the windshield or rear window. Make sure that they are not frozen to the glass before turning them on to avoid damaging the blade. Keep the blade rubber out of contact with petroleum products.

NOTE: Life expectancy of wiper blades varies depending on geographical area and frequency of use. Poor performance of blades may be present with chattering, marks, water lines or wet spots. If any of these conditions are present, clean the wiper blades or replace as necessary.
Rear Wiper Blade Removal/Installation

1. Lift the pivot cap on the rear wiper arm upward, this will allow the rear wiper blade to be raised off of the liftgate glass.

2. Lift the rear wiper arm upward to raise the wiper blade off of the liftgate glass.

3. Grab the bottom of the wiper blade and rotate it forward to unsnap the blade pivot pin from the wiper blade holder.

4. Install the wiper blade pivot pin into the wiper blade holder at the end of the wiper arm, and firmly press the wiper blade until it snaps into place.

NOTE: The rear wiper arm cannot be raised fully upward unless the pivot cap is raised first.

2. Lift the rear wiper arm upward to raise the wiper blade off of the liftgate glass.
5. Lower the wiper blade and snap the pivot cap into place.

Adding Washer Fluid

The windshield washer fluid reservoir is located in the underhood compartment, and the fluid level should be checked at regular intervals. Fill the reservoir with windshield washer solvent (not coolant/antifreeze). Refer to “Underhood Compartment” in “Maintaining Your Vehicle” for further information.

WARNING!

Commercially available windshield washer solvents are flammable. They could ignite and burn you. Care must be exercised when filling or working around the washer solution.

Brake System

In order to assure brake system performance, all brake system components should be inspected periodically. Refer to the “Maintenance Schedule” for the proper maintenance intervals.

WARNING!

Riding the brakes can lead to brake failure and possibly a collision. Driving with your foot resting or riding on the brake pedal can result in abnormally high brake temperatures, excessive lining wear, and possible brake damage. Riding the brakes may also reduce braking capacity in an emergency.

Brake Master Cylinder

The fluid level in the master cylinder should be checked when performing under hood services, or immediately if the “Brake Warning Light” is on and the parking brake is not applied.

Be sure to clean the top of the master cylinder area before removing the cap. If necessary, add fluid to bring the fluid level up to the requirements described on the brake fluid reservoir. Fluid level can be expected to fall as the brake pads wear. The brake fluid level should be checked when the pads are replaced. However, low fluid level may be caused by a leak and a checkup may be needed.
NOTE:
Use only manufacturer’s recommended brake fluid. Refer to “Fluids, Lubricants, And Genuine Parts” in “Maintaining Your Vehicle” for further information.

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Use only manufacturer’s recommended brake fluid. Refer to “Fluids, Lubricants, And Genuine Parts” in “Maintaining Your Vehicle” for further information. Using the wrong type of brake fluid can severely damage your brake system and/or impair its performance. The proper type of brake fluid for your vehicle is also identified on the original factory installed hydraulic master cylinder reservoir.</td>
</tr>
<tr>
<td>• To avoid contamination from foreign matter or moisture, use only new brake fluid or fluid that has been in a tightly closed container. Keep the master cylinder reservoir cap secured at all times. Brake fluid in a open container absorbs moisture from the air resulting in a lower boiling point.</td>
</tr>
</tbody>
</table>

(Continued)

<table>
<thead>
<tr>
<th>WARNING! (Continued)</th>
</tr>
</thead>
<tbody>
<tr>
<td>This may cause it to boil unexpectedly during hard or prolonged braking, resulting in sudden brake failure. This could result in a collision.</td>
</tr>
<tr>
<td>• Overfilling the brake fluid reservoir can result in spilling brake fluid on hot vehicle parts, causing the brake fluid to catch fire. Brake fluid can also damage painted and vinyl surfaces, care should be taken to avoid its contact with these surfaces.</td>
</tr>
<tr>
<td>• Do not allow petroleum-based fluid to contaminate the brake fluid. Brake seal components could be damaged, causing partial or complete brake failure. This could result in a collision.</td>
</tr>
</tbody>
</table>

Appearance Care And Protection From Corrosion

Protection Of Body And Paint From Corrosion

Vehicle body care requirements vary according to geographic locations and usage. Chemicals that make roads passable in snow and ice and those that are sprayed on trees and road surfaces during other seasons are highly corrosive to the metal in your vehicle. Outside parking, which exposes your vehicle to airborne contaminants, road surfaces on which the vehicle is operated, extreme
hot or cold weather and other extreme conditions will have an adverse effect on paint, metal trim, and underbody protection.

The following maintenance recommendations will enable you to obtain maximum benefit from the corrosion resistance built into your vehicle.

**What Causes Corrosion?**

Corrosion is the result of deterioration or removal of paint and protective coatings from your vehicle.

The most common causes are:
- Road salt, dirt and moisture accumulation.
- Stone and gravel impact.
- Insects, tree sap and tar.
- Salt in the air near seacoast localities.
- Atmospheric fallout/industrial pollutants.

**Washing**

- Wash your vehicle regularly. Always wash your vehicle in the shade using Mopar Car Wash, or a mild car wash soap, and rinse the panels completely with clear water.
- If insects, tar, or other similar deposits have accumulated on your vehicle, use Mopar Super Kleen Bug and Tar Remover to remove.
- Use a high quality cleaner wax, such as Mopar Cleaner Wax to remove road film, stains and to protect your paint finish. Take care never to scratch the paint.
- Avoid using abrasive compounds and power buffing that may diminish the gloss or thin out the paint finish.

<table>
<thead>
<tr>
<th>CAUTION!</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use abrasive or strong cleaning materials such as steel wool or scouring powder that will scratch metal and painted surfaces.</td>
</tr>
<tr>
<td>Use of power washers exceeding 1,200 psi (8 274 kPa) can result in damage or removal of paint and decals.</td>
</tr>
</tbody>
</table>
Special Care

- If you drive on salted or dusty roads, or if you drive near the ocean, hose off the undercarriage at least once a month.

- It is important that the drain holes in the lower edges of the doors, rocker panels, and trunk be kept clear and open.

- If you detect any stone chips or scratches in the paint, touch them up immediately. The cost of such repairs is considered the responsibility of the owner.

- If your vehicle is damaged due to a collision or similar cause that destroys the paint and protective coating, have your vehicle repaired as soon as possible. The cost of such repairs is considered the responsibility of the owner.

- If you carry special cargo such as chemicals, fertilizers, de-icer salt, etc., be sure that such materials are well packaged and sealed.

- If a lot of driving is done on gravel roads, consider mud or stone shields behind each wheel.

- Use Mopar Touch Up Paint on scratches as soon as possible. Your authorized dealer has touch up paint to match the color of your vehicle.

Wheel And Wheel Trim Care

All wheels and wheel trim, especially aluminum and chrome plated wheels, should be cleaned regularly using mild (neutral pH) soap and water to maintain their luster and to prevent corrosion. Wash wheels with the same soap solution recommended for the body of the vehicle.

Your wheels are susceptible to deterioration caused by salt, sodium chloride, magnesium chloride, calcium chloride, etc., and other road chemicals used to melt ice or control dust on dirt roads. Use a soft cloth or sponge and mild soap to wipe away promptly. Do not use harsh chemicals or a stiff brush. They can damage the wheel’s protective coating that helps keep them from corroding and tarnishing.

NOTE: Many aftermarket wheel cleaners contain strong acids or strong alkaline additives that can harm the wheel surface.
CAUTION!

Avoid products or automatic car washes that use acidic solutions or strong alkaline additives or harsh brushes. These products and automatic car washes may damage the wheel’s protective finish. Such damage is not covered by the New Vehicle Limited Warranty. Only car wash soap, Mopar Wheel Cleaner or equivalent is recommended.

When cleaning extremely dirty wheels including excessive brake dust, care must be taken in the selection of tire and wheel cleaning chemicals and equipment to prevent damage to the wheels. Mopar Wheel Treatment or Mopar Chrome Cleaner or their equivalent is recommended or select a non-abrasive, non-acidic cleaner for aluminum or chrome wheels. Do not use any products on Dark Vapor or Black Satin Chrome Wheels. They will permanently damage this finish and such damage is not covered by the New Vehicle Limited Warranty.

CAUTION!

Do not use scouring pads, steel wool, a bristle brush, metal polishes or oven cleaner. These products may damage the wheel’s protective finish. Such damage is not covered by the New Vehicle Limited Warranty. Only car wash soap, Mopar Wheel Cleaner or equivalent is recommended.

NOTE: If you intend parking or storing your vehicle for an extended period after cleaning the wheels with wheel cleaner, drive your vehicle for a few minutes before doing so. Driving the vehicle and applying the brakes when stopping will reduce the risk of brake rotor corrosion.
CAUTION!

If your vehicle is equipped with Dark Vapor or Black Satin Chrome wheels DO NOT USE wheel cleaners, abrasives or polishing compounds. They will permanently damage this finish and such damage is not covered by the New Vehicle Limited Warranty. USE ONLY MILD SOAP AND WATER WITH A SOFT CLOTH. Used on a regular basis; this is all that is required to maintain this finish.

Stain Repel Fabric Cleaning Procedure — If Equipped

Stain Repel seats may be cleaned in the following manner:

- Remove as much of the stain as possible by blotting with a clean, dry towel.
- Blot any remaining stain with a clean, damp towel.
- For tough stains, apply Mopar Total Clean, or a mild soap solution to a clean, damp cloth and remove stain. Use a fresh, damp towel to remove soap residue.

- For grease stains, apply Mopar Multi-Purpose Cleaner to a clean, damp cloth and remove stain. Use a fresh, damp towel to remove soap residue.
- Do not use any harsh solvents or any other form of protectants on Stain Repel products.

Interior Care

Use Mopar Total Clean to clean fabric upholstery and carpeting.

Use Mopar Total Clean to clean vinyl upholstery.

Mopar Total Clean is specifically recommended for leather upholstery.

Your leather upholstery can be best preserved by regular cleaning with a damp soft cloth. Small particles of dirt can act as an abrasive and damage the leather upholstery and should be removed promptly with a damp cloth. Stubborn soils can be removed easily with a soft cloth and Mopar Total Clean. Care should be taken to avoid soaking your leather upholstery with any liquid. Please do not use polishes, oils, cleaning fluids, solvents, detergents, or ammonia-based cleaners to clean your leather upholstery. Application of a leather conditioner is not required to maintain the original condition.
WARNING!

Do not use volatile solvents for cleaning purposes. Many are potentially flammable, and if used in closed areas they may cause respiratory harm.

CAUTION!

- Direct contact of air fresheners, insect repellents, suntan lotions, or hand sanitizers to the plastic, painted, or decorated surfaces of the interior may cause permanent damage. Wipe away immediately.
- Damage caused by these type of products may not be covered by your New Vehicle Limited Warranty.
- Do not use Alcohol and Alcohol-based and/or Ketone-based cleaning products to clean leather seats, as damage to the seat may result.

Cleaning Headlights

Your vehicle has plastic headlights that are lighter and less susceptible to stone breakage than glass headlights. Plastic is not as scratch resistant as glass and therefore different lens cleaning procedures must be followed.

To minimize the possibility of scratching the lenses and reducing light output, avoid wiping with a dry cloth. To remove road dirt, wash with a mild soap solution followed by rinsing.

Do not use abrasive cleaning components, solvents, steel wool or other aggressive material to clean the lenses.

Glass Surfaces

All glass surfaces should be cleaned on a regular basis with Mopar Glass Cleaner, or any commercial household-type glass cleaner. Never use an abrasive type cleaner. Use caution when cleaning the inside rear window equipped with electric defrosters or windows equipped with radio antennas. Do not use scrapers or other sharp instrument that may scratch the elements.

When cleaning the rear view mirror, spray cleaner on the towel or cloth that you are using. Do not spray cleaner directly on the mirror.
Instrument Panel Cover

The instrument panel cover has a low glare surface which minimizes reflections on the windshield. Do not use protectants or other products which may cause undesirable reflections. Use soap and warm water to restore the low glare surface.

Instrument Panel Bezels

<table>
<thead>
<tr>
<th>CAUTION!</th>
</tr>
</thead>
<tbody>
<tr>
<td>When installing hanging air fresheners in your vehicle, read the installation instructions carefully. Some air fresheners will damage the finish of painted or decorated parts if allowed to directly contact any surface.</td>
</tr>
</tbody>
</table>

Cleaning Plastic Instrument Cluster Lenses

The lenses in front of the instruments in this vehicle are molded in clear plastic. When cleaning the lenses, care must be taken to avoid scratching the plastic.

1. Clean with a wet soft cloth. A mild soap solution may be used, but do not use high alcohol content or abrasive cleaners. If soap is used, wipe clean with a clean damp cloth.

2. Dry with a soft cloth.

Seat Belt Maintenance

Do not bleach, dye or clean the belts with chemical solvents or abrasive cleaners. This will weaken the fabric. Sun damage can also weaken the fabric.

If the belts need cleaning, use a mild soap solution or lukewarm water. Do not remove the belts from the vehicle to wash them. Dry with a soft cloth.

Replace the belts if they appear frayed or worn or if the buckles do not work properly.

NOTE: If the belts retract slowly, inspect the upper turning loop for soiling. If soiling is present, clean with a wet soft cloth until all residue is removed.

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>A frayed or torn belt could rip apart in a collision and leave you with no protection. Inspect the belt system periodically, checking for cuts, frays, or loose parts. Damaged parts must be replaced immediately. Do not disassemble or modify the system.</td>
</tr>
</tbody>
</table>

(Continued)
### WARNING! (Continued)

Seat belt assemblies must be replaced after a collision if they have been damaged (i.e., bent retractor, torn webbing, etc.).

### FUSES

**WARNING!**

- When replacing a blown fuse, always use an appropriate replacement fuse with the same amp rating as the original fuse. Never replace a fuse with another fuse of higher amp rating. Never replace a blown fuse with metal wires or any other material. Failure to use proper fuses may result in serious personal injury, fire and/or property damage.
- Before replacing a fuse, make sure that the ignition is off and that all the other services are switched off and/or disengaged.
- If the replaced fuse blows again, contact an authorized dealer.

(Continued)

### WARNING! (Continued)

- If a general protection fuse for safety systems (air bag system, braking system), power unit systems (engine system, gearbox system) or steering system blows, contact an authorized dealer.

### Interior Fuses

The interior fuse panel is part of the Body Control Module (BCM) and is located on the driver’s side under the instrument panel.

**VEHICLE STORAGE**

The preferred way of storing your vehicle for a long period of time is to leave it attached to a Level 1 or Level 2 charger. The vehicle has a wake-up feature that will wake the system every 3 weeks and do a maintenance charge on the 12 Volt battery and also top off the high voltage battery if necessary.

Anytime you store your vehicle, or keep it out of service (e.g., vacation) for two weeks or more, run the air conditioning system at idle for about five minutes in the fresh air and high blower setting. This will ensure adequate system lubrication to minimize the possibility of compressor damage when the air conditioning system is started again.

(See authorized dealer)
BULB REPLACEMENT

Interior Bulbs

Rear Cargo Lamp
1. Using a suitable tool open the light box.
2. Pull the bulb out.
3. Replace the bulb, and reinstall the light box cover.

Exterior Bulbs

NOTE: Lens fogging can occur under certain atmospheric conditions. This will usually clear as atmospheric conditions change to allow the condensation to change back into a vapor. Turning the lamps on will usually accelerate the clearing process.

Headlamps Low Beam And High Beam
1. Remove the plastic cap from the back of the headlamp housing.
2. Rotate the bulb counter-clockwise.
3. Remove the bulb and replace as needed.
4. Install the bulb and rotate clockwise to lock in place.
5. Reinstall the plastic cap.

Front Turn Signal, Parking And Daytime Running Lamps
1. Turn the steering wheel completely to the left or right.
2. Open the wheel housing access door.
3. Remove the plastic cap from the back of the lamp housing.
4. Rotate bulb/socket counter-clockwise.
5. Remove the bulb and replace as needed.
6. Install the bulb into socket, and rotate bulb/socket clockwise into lamp locking it in place.
7. Reinstall the plastic cap.

**Front Fog Lamps**

To replace the front fog lights, see your authorized dealer.

**Front/Rear Side Marker Lamps**

1. Remove portion of the wheel liner to allow hand access to side marker lamp.
2. Rotate the bulb socket counterclockwise, and remove the bulb and socket assembly from the housing.
3. Pull the bulb from the socket and insert the replacement bulb.
4. Install the bulb and socket assembly into the housing, and rotate the socket clockwise to lock it in place.
5. Reinstall the wheel liner.

**Rear Tail, Stop, Backup And Turn Signal Lamps**

1. Open the liftgate.
2. Remove the two screws and remove the tail lamp assembly.
3. Remove four screws and separate the backplate from the lamp housing.

4. Remove the tail, stop, or turn signal bulbs by pushing them slightly and turning counter-clockwise.

5. Remove the backup lamp bulb by pulling straight out.

6. Replace lamps as required and reinstall lamp.

**Center High Mounted Stop Lamp (CHMSL)**

1. Remove the two guard caps and the two fastening screws.

2. Remove the center high mounted stop lamp assembly.

3. Disconnect the electric connector.

4. Press the retaining device and open the bulb holder.

5. Remove the snap-fitted bulb to be replaced and replace it.

6. Close the back cap locking it properly.

7. Reinstall the two fastening screws and reinstall the guard caps.

---

**CAUTION!**

- Mixing of coolant (antifreeze) other than specified Organic Additive Technology (OAT) coolant (antifreeze), may result in cooling system damage and may decrease corrosion protection. Organic Additive Technology (OAT) coolant is different and should not be mixed with Hybrid Organic Additive Technology (HOAT) coolant (antifreeze). If a non-OAT coolant (antifreeze) is introduced into the cooling system in an emergency, it should be replaced with the specified coolant (antifreeze) as soon as possible.

- Do not use water alone or alcohol-based coolant (antifreeze) products. Do not use additional rust inhibitors or antitrust products, as they may not be compatible with the radiator coolant and may plug the radiator.

- This vehicle has not been designed for use with propylene glycol-based coolant (antifreeze). Use of propylene glycol-based coolant (antifreeze) is not recommended.
MAINTENANCE SCHEDULES

CONTENTS

MAINTENANCE SCHEDULE ............... 276
Maintenance Chart ................... 276
MAINTENANCE SCHEDULE

Once A Month Or Before A Trip:
- Check windshield washer fluid level
- Check the tire inflation pressures and look for unusual wear or damage
- Check the fluid levels of the coolant reservoirs and brake master cylinder
- Check function of all interior and exterior lights

Maintenance Chart

Required Maintenance Intervals

Refer to the maintenance schedules on the following page for the required maintenance intervals.

At Every Service Interval:

- Rotate the tires. Rotate at the first sign of irregular wear.
- Inspect brake pads, shoes, rotors, drums, and hoses.
- Inspect battery cooling system protection and hoses.
- Check and adjust hand brake.

Refer to the Maintenance Schedules on the following pages for the required maintenance intervals.

WARNING!

- You can be badly injured working on or around a motor vehicle. Do only service work for which you have the knowledge and the right equipment. If you have any doubt about your ability to perform a service job, take your vehicle to a competent mechanic.
- Failure to properly inspect and maintain your vehicle could result in a component malfunction and effect vehicle handling and performance. This could cause an accident.

SUGGESTIONS FOR OBTAINING SERVICE FOR YOUR VEHICLE

Prepare For The Appointment

If you are having warranty work done, be sure to bring the right papers with you, as well as your warranty folder. All work to be performed may not be covered by the warranty. Discuss additional charges with the service manager. Keep a maintenance log of your vehicle’s service history, as this can often provide a clue to the current problem.

Prepare A List

Make a written list of your vehicle’s problems or the specific work you want done. If you’ve had an accident or work done that is not on your maintenance log, let the service advisor know.

Be Reasonable With Requests

If you list a number of items and you must have your vehicle by the end of the day, discuss the situation with the service advisor and list the items in order of priority. At many authorized dealers, you may obtain a rental vehicle at a minimal daily charge. If you need a rental, it is advisable to make these arrangements when you call for an appointment.

IF YOU NEED ASSISTANCE

The manufacturer and its authorized dealer are vitally interested in your satisfaction. We want you to be happy with our products and services.

Warranty service must be done by an authorized dealer. We strongly recommend that you take the vehicle to an authorized dealer. They know your vehicle the best, and are most concerned that you get prompt and high quality service. The manufacturer’s authorized dealer have the facilities, factory-trained technicians, special tools, and the latest information to ensure the vehicle is fixed correctly and in a timely manner.

This is why you should always talk to an authorized dealer service manager first. Most matters can be resolved with this process.

• If for some reason you are still not satisfied, talk to the general manager or owner of the authorized dealer. They want to know if you need assistance.
• If an authorized dealer is unable to resolve the concern, you may contact the manufacturer’s customer center.
Any communication to the manufacturer’s customer center should include the following information:

- Owner’s name and address
- Owner’s telephone number (home and office)
- Authorized dealer name
- Vehicle Identification Number (VIN)
- Vehicle delivery date and mileage

**FIAT Customer Center**

P.O. Box 21–8004 Auburn Hills, MI 48321–8004  
Phone: 1-888-242-6342

Customer Assistance For The Hearing Or Speech Impaired (TDD/TTY)

To assist customers who have hearing difficulties, the manufacturer has installed special TDD (Telecommunication Devices for the Deaf) equipment at its customer center. Any hearing or speech impaired customer, who has access to a TDD or a conventional teletypewriter (TTY) in the United States, can communicate with the manufacturer by dialing 1-800-380-CHRY.

Canadian residents with hearing difficulties that require assistance can use the special needs relay service offered by Bell Canada. For TTY teletypewriter users, dial 711 and for Voice callers, dial 1-800-855-0511 to connect with a Bell Relay Service operator.

Service Contract

You may have purchased a service contract for a vehicle to help protect you from the high cost of unexpected repairs after the manufacturer’s New Vehicle Limited Warranty expires. The manufacturer stands behind only the manufacturer’s service contracts. If you purchased a manufacturer’s service contract, you will receive Plan Provisions and an Owner Identification Card in the mail within three weeks of the vehicle delivery date. If you have any questions about the service contract, call the manufacturer’s Service Contract National Customer Hotline at 1-800-521-9922 (Canadian residents, call (800) 465-2001 English / (800) 387-9983 French).

The manufacturer will not stand behind any service contract that is not the manufacturer’s service contract. It is not responsible for any service contract other than the manufacturer’s service contract. If you purchased a service contract that is not a manufacturer’s service contract, and you require service after the manufacturer’s New Vehicle Limited Warranty expires, please refer to the contract documents, and contact the person listed in those documents.

We appreciate that you have made a major investment when you purchased the vehicle. An authorized dealer has also made a major investment in facilities, tools, and training to assure that you are absolutely delighted with the ownership experience. You will be pleased with their sincere efforts to resolve any warranty issues or related concerns.
WARNING!

Engine exhaust (internal combustion engines only), some of its constituents, and certain vehicle components contain, or emit, chemicals known to the State of California to cause cancer and birth defects, or other reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain, or emit, chemicals known to the State of California to cause cancer and birth defects, or other reproductive harm.

WARRANTY INFORMATION

See the Warranty Information Booklet, located on the DVD, for the terms and provisions of FCA USA LLC warranties applicable to this vehicle and market.

REPORTING SAFETY DEFECTS

In The 50 United States And Washington, D.C.

If you believe that your vehicle has a defect that could cause a crash or cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying FCA US LLC. If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your authorized dealer or FCA US LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll free at 1-888-327-4236 (TTY: 1-800-424-9153); or go to http://www.safercar.gov; or write to: Administrator, NHTSA, 1200 New Jersey Avenue, SE., West Building, Washington, D.C. 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.

In Canada

If you believe that your vehicle has a safety defect, you should contact the Customer Service Department immediately. Canadian customers who wish to report a safety defect to the Canadian government should contact Transport Canada, Motor Vehicle Defect Investigations and Recalls at 1-800-333-0510 or go to http://www.tc.gc.ca/roadsafety/.
To order the following manuals, you may use either the website or the phone numbers listed below. Visa, Mastercard, American Express, and Discover orders are accepted.

**Service Manuals**

These comprehensive Service Manuals provide the information that students and professional technicians need in diagnosing/troubleshooting, problem solving, maintaining, servicing, and repairing FCA US LLC vehicles. A complete working knowledge of the vehicle, system, and/or components is written in straightforward language with illustrations, diagrams, and charts.

**Diagnostic Procedure Manuals**

Diagnostic Procedure Manuals are filled with diagrams, charts and detailed illustrations. These practical manuals make it easy for students and technicians to find and fix problems on computer-controlled vehicle systems and features. They show exactly how to find and correct problems the first time, using step-by-step troubleshooting and drivability procedures, proven diagnostic tests and a complete list of all tools and equipment.

**Owner’s Manuals**

These Owner’s Manuals have been prepared with the assistance of service and engineering specialists to acquaint you with specific FCA US LLC vehicles. Included are starting, operating, emergency and maintenance procedures as well as specifications, capabilities and safety tips.

INSTALLATION OF RADIO TRANSMITTING EQUIPMENT

Special design considerations are incorporated into this vehicle’s electronic system to provide immunity to radio frequency signals. Mobile two-way radios and telephone equipment must be installed properly by trained personnel. The following must be observed during installation.

The positive power connection should be made directly to the battery and fused as close to the battery as possible. The negative power connection should be made to body sheet metal adjacent to the negative battery connection. This connection should not be fused.

Antennas for two-way radios should be mounted on the roof or the rear area of the vehicle. Care should be used in mounting antennas with magnet bases. Magnets may affect the accuracy or operation of the compass on vehicles so equipped.

The antenna cable should be as short as practical and routed away from the vehicle wiring when possible. Use only fully shielded coaxial cable.

Carefully match the antenna and cable to the radio to ensure a low Standing Wave Ratio (SWR).

Mobile radio equipment with output power greater than normal may require special precautions.

All installations should be checked for possible interference between the communications equipment and the vehicle’s electronic systems.
